THE PRICE QUESTION

The lightest Dillon Hinge-Stay Fence has No. 12 wire for stays and intermediate strands, so it doesn't cost you or your customer nearly as much as you have to pay for a fence with No. 9 wire. It is the grade of strand wires and the way they are tempered, not the thickness, that counts in wire fencing. No. 12 in the "Dillon" is stronger than No. 9 Soft Wire in other fences. More Power, Less Cost, that's the "Dillon." Think of it! **Get it!** See next week for description of the heavy Dillon.

$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

CANADIAN MANUFACTURERS IN ENGLAND

By W. L. E.

WHILE it is, perhaps, impossible to completely diagnose public opinion on political questions, there is nothing to prevent one doing his best in that direction. One could not, during a two months' stay there, examine the public conditions in every nook and corner of Great Britain, but if he employed his time assiduously he could learn a great deal.

* * *

I tried to learn a great deal in regard to the fiscal situation in Great Britain, conversed as opportunity afforded with all sorts and conditions of men, and my conclusions, therefore, whether right or wrong, have not been reached without perseverance.

* * *

With a great many people in Great Britain free trade is still almost a religious belief. Some people say they are short-sighted; other people use stronger language. But even those of us who, after careful study, are of the opinion that Great Britain might, with profit to herself, amend her fiscal policy, should not be too dogmatic in our conclusions. Since the advent of free trade Great Britain has undoubtedly prospered, and that greatly. This you will be told on every hand when you begin to suggest. Even those whose faith in the present policy is becoming shaken will tell you this.

Messrs. Callahan of Hamilton, and Dennis Murphy of Ottawa, Discussing things on Deck.

* * *

It does not follow that because a certain bridge has for years carried one over in safety it will always do so. One thing is certain, it must be repaired occasionally if it is to do so. But because it has heretofore carried one over in safety, one has naturally a reverence for it, and naturally hesitates to make a change for that which may be of doubtful expediency. This, to my mind, about illustrates the fiscal situation in the Mother Country.

* * *

One thing, however, is certain: the public mind is undergoing a change in regard to the fiscal policy. It is in a transitionary state. Whether it will produce radical effects remains to be seen. But it is significant that there is any change at all. A few years ago it would have been an unpardonable sin politically to publicly advocate the doctrine of protection. To-day he is no longer a great sinner. He is at the worst a misguided man, while the number who positively think him right are a great deal more numerous. One cannot say positively what will happen, and the remembrance of the circumstances under which the legislation giving existence to free trade was enacted leaves one still in the dark.

* * *

Opinion in Great Britain in regard to the tariff question is diversified. There is one class who are avowed protectionists. They are in a minority, I should say a small minority. But they are growing in numbers, although at present one cannot say rapidly. In fact I should think scarcely as rapidly as during the year following Mr. Chamberlain's retirement from the Government. The trade returns have been persistently antagonistic to Mr. Chamberlain's propaganda, while the bye-elections have been discouraging to him, and the Balfour Administration has shown the white feather. Like the Laodicians, the Government is neither hot nor cold in Mr. Chamberlain's interest, although he was zealous enough on behalf of his party's welfare when he retired from the Colonial Office to preach the new crusade of protection and Imperialism.

* * *

Another class, and by no means a small one, is composed of those who are in a skeptical frame of mind. Their faith in free trade, with competing nations high protectionists, has received a serious wrench. As one manufacturer said to me, "We feel that something should be done in the way of tariff reform, but just what should be done is another question." Said another manufacturer to me, "The question is an important one. I do not think we should be in a hurry to make a change. We do not want to jump from the frying pan into the fire. Before a change is made there should be a thorough investigation by the Government. It is better to take our time than to act too quickly."

* * *

But the great mass of the people—the merchants and the working classes—are apparently yet unmoved by the fiscal policy. It is rarely that one ever hears them mention it. It does not appear to be a sufficiently live question for consideration. The only question that concerns them is the educational question. In regard to that they are by no means passive. It overshadows all others. They are "Agin the Government," and are calmly waiting for the next general election to express their opinion through the ballot. As an issue, therefore, the fiscal question has no chance of being fairly tested. Judging from public opinion, the Government will be routed, and their speeches indicate that they expect it. One cannot but regret that public opinion will not have an opportunity of showing at the next general election where it really stands in regard to the

* * *

One of the undoubted drawbacks to the advancement of Mr. Chamberlain's protectionist platform is the tax on food plank. No matter how one may argue to the effect that a small duty on wheat would not materially effect the price of the loaf the idea is pooh-poohed. It is decidedly unpopular, and Mr. Chamberlain has a great deal more educational work to do in regard to the food plank of his platform than any other. And without a tax on food there can scarcely be a preferential trade arrangement with Canada and the other food producing colonies.

Three Montrealers—Messrs. Gravel, Horsfall and Robertson.

* * *

While Mr. Chamberlain's policy is not very much alive at present, it is by no means dead. Those who are its propagandists are too energetic to allow it to die. But at present it seems a long way from realization. And in no particular

as much so as in its preferential trade proposals.

* * *

A few days before we left Canada a friend of mine, who takes a pessimistic view of both industrial and military conditions in Great Britain, remarked to me: "England is one of the decaying nations." While none of us had imbibed such ultra pessimism as this, most of us had become possessed of the idea that she was lagging behind some of the nations in the industrial arts. I have not been authorized to speak for our party, but I have no hesitation in saying that, from what I have gathered from personal conversation with a great many of them, our preconceived opinions had very few facts upon which to rest.

* * *

Great Britain is by no means a decaying nation. She is the mother of manufacturing industries, as well as of parliaments. As such she is getting old; in fact, is old. And just the same as it is with individuals who are getting up in years, she is somewhat set in her ways. She is conservative. But in nations age is not always accompanied by decay. Where the nation is composed of the right kind of people the concomitant of age is maturity. Great Britain is maturing rather than decaying. In some respects industrially Great Britain is rather out of date, but in others she is in advance of her competitors. And what was most obvious to us was the fact that Great Britain is certainly becoming wide-awake in regard to those things in which she was supposed to be somewhat drowsy. We saw signs of this everywhere we went. The manufacturers are not only anxious to do business, but they are equally anxious to do it on the most approved methods, and to manufacture their goods not only with the best and most improved machinery, but to make them of the best quality. They desire quality in what they sell just as they demand quality in what they buy.

* * *

Speaking of imperial matters, I am reminded of an error in a London paper's report of one of President George's speeches, which, although confined to one word, completely misrepresents his views. A Montreal paper, not knowing of the error, was thereby led to rather severely criticize Mr. George. The error was in making Mr. George say that the manufacturers of Canada did not want a "protective" tariff against the Mother Country. What he said was that they did not want a "prohibitive" tariff against the Mother Country—quite a different thing.

CLOSING THE YEAR.

EACH year should, as far as possible, stand on its merits, i.e., transactions for the period should all be put through within the period. If this is impossible, as is very often the case, these items should be looked after very carefully on what might be termed an "outstanding list," which may be compiled as the various items come up in the ordinary course of business. These items may represent amounts due (liabilities); unearned, or, to use a different term, prepaid amounts; (assets), which would be brought down in the respective accounts on the debit or credit side, as the case may be.

This subject may properly be divided into four headings necessary to the preparation of an annual statement, as follows: 1, stock taking; 2, purchases; 3, sales; 4, outstandings.

1, Stock Taking.—Inventory sheets should be prepared from the catalogue and typewritten, together with the prices of the various lines entered at cost, or if the advance on cost is uniform the list prices may be entered and the cost discount deducted from the total. So as not to interfere with the current shipments of goods, the different lines on the shelves should be labeled as to brand and quality, and when orders are filled deductions made from the different labels. A day or two will usually suffice to call in the stock and enter on the sheets already prepared. At the same time stock of catalogues, price lists, advertising matter and stationery should be taken carefully so as to insure the correct amount being brought forward as an asset in the accounts, most of which in these cases are "expense accounts." The stock sheets should be extended and the extensions checked to insure correctness.

2, Purchases.—It is very important that all purchase invoices should be put through the "purchase journal" for goods actually taken into stock. A record of purchase invoices should be kept as received by either numbering and recording in a book for this purpose, or by using a yearly record book in which are entered the names of the different concerns from which goods are purchased, opposite each being the columns for the months of the year. By referring to this book it can be ascertained at once whether any goods have been purchased in a certain month, and a statement may then be procured which will give full particulars as to dates and amounts; when these statements have all been received the amounts should be checked off with the invoices entered in the "purchase journal," and a list of all unpassed invoices handed to the different departments with the request that full particulars be given as to whether the goods represented by such invoices were taken into stock or not. By using this method and by a thorough scanning of the receiving books for goods not invoiced, it is almost certain that all purchase invoices have been credited.

3, Sales.—Special care should be exercised to see that all goods shipped, which were not taken into stock, were charged through the "sales;" also that all rebates, allowances, etc., are credited through the "sales." If this should be impossible at the time, provision may be made in the "sales" account when closing the books. All goods returned by customers should be taken into stock and credits put through "sales" for same before closing the books. Output shipments from factories, even if received after stock at the warehouse has been called in, should be added to the inventory.

4, Outstandings.—Insurance should be calculated as to the amount of unearned premiums, and the amounts brought down in the respective accounts as an asset. Provision should be made for magazine, sign and permanent advertisements from which no direct benefit would have been derived in the current year. An amount should be set aside as an asset for the approximate value of the catalogues, price lists, etc., on hand when the books are closed. The actual stock of stationery should be taken, priced at cost, and the value brought down as an asset in the "stationery" or "expense" account. Provision should be made in the "purchase" and "sales" accounts for rebates, allowances, etc., due customers on sales or due from creditors on purchases. Amounts should be brought down in the expense accounts as an asset or liability, as the case may be, for taxes, rents, water, fuel, light, telephones. Freights on goods shipped and charged in the fiscal year and not yet paid, should be provided for. Also freight on goods held on consignment at some distant point should be taken into account as the value of such goods has been enhanced by being laid down at a distance. Salaries of officers and foremen should be apportioned over the different departments, also salaries or wages of all unproductive labor. Interest on notes due, discount on bills discounted, sales discount and purchase discounts should be provided for if thought advisable.

ELECTRIC SMELTING AT "SOO."

"IN ten years Canada will have become a great metallurgical country. You will see an iron industry in this Dominion larger than in any other country in the world. Canada will yet furnish to the world its iron supply. It will be just the same with iron as with wheat. A decade from now Canada will outstrip all other countries in wheat-growing. The production of iron at a cheaper rate than it can be made elsewhere will cause Canada to take a similar position as far as iron is concerned."

The foregoing prophecy was made, not by a Canadian, but by a visitor from France, Dr. P. L. T. Heroult, technical director of the French Electro-Metallurgical Society, who have immense works at La Praz, France, where aluminum and steel are produced.

Dr. Heroult is perhaps the best living authority on smelting of iron ores and the manufacture of steel by the electric method. He has invented the process which is named after him. Two great plants for the refining of steel by the Heroult process are in course of construction, one in Germany, and the other at Syracuse, N.Y. By the expenditure of about one dollar per ton steel worth $20 a ton will be converted into a product worth $200 a ton. Dr. Heroult has smelted magnetite by electricity, and it

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

is a success. He is reasonably certain we can produce pig iron and a high-grade steel here. But to make certain beyond all peradventure, and to ascertain all the facts that can be learned in connection with electric smelting, experiments for six months will be conducted at the "Soo" in a plant of special design and construction. Dr. Heroult thinks that under favorable conditions pig iron can be made for $10 per ton, while steel will cost only $4 per ton more to produce. This means a saving of several dollars as compared with the cost of producing pig iron and steel elsewhere. But even if the cost were the same as in other countries it would mean great things for Canada.

When asked what the successful smelting of iron ores would mean to Canada, Dr. Heroult said: "Pig iron is the basis for structural and other steels. At present Canada expends fifty and sixty millions of dollars in buying steel abroad. The idea ought to be to make that steel in this country out of Canadian material by the aid of Canadian water power and Canadian labor. Even if the cost of making iron and steel here should only equal the cost elsewhere you would keep in Canada the money you now send abroad. But we expect the cost of manufacture will be less here. Think of what it means. The retention in Canada of sixty millions of dollars now yearly spent abroad, the supplying of the new demand for steel rails, structural steel, and other classes of the product which has arisen in consequence of the country's development, the profitable sale of your surplus product in foreign markets, and the creation in this country of numerous other industries more or less dependent upon iron and steel. As to the iron resources of this country, from all that I can learn they are vast indeed. In Sweden the quantity of ore in sight is sufficient to supply the markets of the world for one hundred years. If we were to compare the quantity in Canada with that in Sweden, I should say Canada has three times as much."

Dr. Heroult has undertaken to repay the Canadian Government for the $15,000 voted for experiments at the Soo out of the proceeds of sale of licenses in Canada for the use of his process.

A SUGGESTED BRITISH TARIFF.

THE British Tariff Commission, working in co-operation with the Right Honorable Joseph Chamberlain, has issued a circular of much interest dealing with the tariff systems of Europe and America. It is pointed out that the tariff systems of Europe and America in operation at the present time are exceedingly diverse in character, no two countries having identically the same system. The differences which exist arise from the fact that the structure and organization of industry of one country differs from that of another, and that the tariff systems adopted have been gradually worked out, not with a view to satisfying any theoretical criteria, but in order to secure certain objects of public policy. Moreover, the actual system of tariffs adopted by any one country can rarely be understood without reference to other parts of their public policy, such as their transport system, navigation laws, (such as exist in France, and were recommended by the shipping commission, which recently reported in the United States), methods of regulating labor, and generally the relations between the Government and industry and commerce. Notwithstanding, however, this diversity of practice in the various countries of Europe and America, their tariff system at the present time falls into certain broad divisions.

The system of tariff proposed by the tariff commission differs from all those adopted abroad. That system is as follows:

(a) A general tariff, consisting of a low scale of duties for foreign countries which admit British wares on fair terms.

(b) A preferential tariff, lower than the general tariff, for those of our colonies which give adequate preference to British manufactures, and framed with a view to securing freer trade within the British Empire;

(c) A maximum tariff, consisting of comparatively higher duties, but subject to reduction by negotiation to the level of the general tariff.

The duties recommended are, at the present stage of the inquiry, stated as ad valorem rates, but this is without prejudice to the question whether the duties ultimately recommended should be ad valorem or specific. That part of the general tariff which has so far formed the subject of recommendation, namely, that which has to do with the iron and steel and the cotton industry, provides for the free admission of iron ore, raw cotton and yarns of all descriptions, and for graduated duties, in no case exceeding 10 per cent. ad valorem on the various manufactured products.

The sporting goods department should be given a lot of attention during the next few months. Every man who goes on a shooting trip should be a buyer of guns and ammunition, as well as camping supplies and fishing tackle. Show these lines in your windows and advertise them.

CATALOGUES, BOOKLETS, ETC.

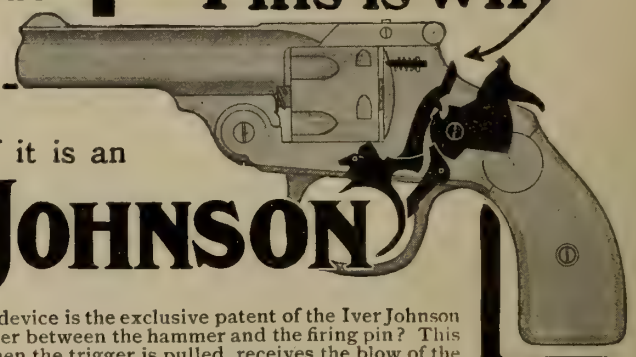
When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

A NEW price list has just been received from the Billings & Spencer Co., Hartford, Conn., quoting new figures on their drop forged machine wrenches. The list is published in a 40-page booklet of neat pocket size, which is profusely illustrated. Some 500 models are made by this firm, and dealers ordering their goods should be sure to order by number, only. All their wrenches from number 200 up are furnished in any of the following conditions: Milled, semi-finished, or finished. Copies of this price list are to be obtained on request. Please mention Hardware and Metal in writing.

Colonial Ranges.

Percival Plow and Stove Co., Merrickville, have issued a neat illustrated catalogue on coated paper enclosed in a handsome cover, the book comprising 32 pages and cover. Attention is called to the Colonial range as a modern, up-to-date and artistic range, the Imperial line of cook stoves for wood, and the new Imperial oak heaters, an entirely new line of the very latest design. Many illustrations are given showing the beauty of these lines while interesting reading matter accompanies the cuts, outlining the utility and special features of the stoves and ranges pictured. The good qualities of the Argand furnace are also dwelt upon. Dealers who mention Hardware and Metal can secure a copy on request.

Kennedy's First Catalogue.



Guns, rifles, ammunition, skates, etc., are the subjects of many splendid illustrations of the up-to-date lines of sporting goods handled by the Kennedy Hardware Co., Limited, Toronto, wholesale jobbers of shelf and heavy hardware. For a 20 page and cover book (8 x 11 inches) it contains an exceptionally comprehensive array of illustrations while the reading matter is plain and simple enough to give the necessary information at a glance. The catalogue is timely growing young house, whose motto is "We ship quick." The cover is in green while the paper contained in the body of the book is of a yellowish color, the intention of the company being to follow this style in their succeeding publications. Readers who have not secured a copy as yet should send for one, mentioning the name of this paper.

Pflueger's Fishing Goods.

Pflueger's celebrated line of sporting goods is fully described and illustrated in Catalogue No. F 23, published by the Enterprise Mfg. Co., of Akron, Ohio. The catalogue contains over 150 pages, with innumerable illustrations and with prices and sizes clearly annotated. The line includes a large variety of fish hooks, leaders, artificial flies, body flies, phantom minnows, luminous baits, rubber baits, rubber insects, spinners, frogs, fluted spoons, kidney baits, egg shape baits, ball baits, beaded baits, muscallonge spoons, fish and frog spears, fish scalers, fish clamps, line spreaders, sinkers, angler's wax, hook extractors, rod cement fish stringers, and Pflueger's trolling, casting and still fishing outfits. The catalogue also includes some interesting pages devoted to a thorough treatment of Pflueger's floats and reels. One of these catalogues will be sent to dealers upon application if the name of Hardware and Metal is mentioned in your letter.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

U. M. C. Ammunition.

Union Metallic Cartridge Co., Bridgeport, Conn., has just issued its first illustrated catalogue of ammunition, showing actual size engravings of everything it makes in metallic cartridges, empty and loaded paper shells, brass shot shells, primers, gun wads, percussion caps and ammunition for rapid fire guns. The book contains 166 pages, each 5 1-2 x 8 1-4 inches, and the company believes is the first complete book of this character published. Some of the features of the book are code words for every item to be used in wiring orders and fac-simile signed gurantees of different manufacturers of firearms in connection with the cartridges made for each maker's particular arm of varying calibres. An indication of the growth of this business is afforded by the fact that the sizes of cartridges made by the Union Metallic Cartridge Co. in 1875 numbered 24 rim fire and 5 central fire cartridges. Now there are about 500 different sizes and kinds of rifle and pistol cartridges for sporting and military uses. In December 1888, the company began loading shotgun shells when they had two gauges only, Nos. 12 and 10, each gauge having a total of four combinations of load. Now in this line there are nine different gauges and four different qualities, covering not less than 200 different combinations of load. There is also a pocket edition of the catalogue which gives all the ammunition the company make, but without the illustrations of pistol and rifle cartridges, code, etc. Mention this paper when writing to the company.

TENDERS FOR RAILWAYS ASKED.

The Quebec Southern Railway, comprising the South Shore, the United Counties and East Richelieu Valley Railways, with rolling stock and equipment, will be sold. Sealed tenders are asked for and they will be received by the registrar of the Exchequer Court up to 12 o'clock noon on November 2nd.

SECURING BUSINESS IN AFRICA.

The South African republics are apparently beginning to open out and Canada is beginning to reap the benefit of the South African war by the way of trade extension. The Ontario Wind Engine & Pump Co., Limited, Toronto, have just received an order from Pretoria for three complete outfits of the well known Canadian Airmotor. There is a great field in South Africa for Canadian enterprise and it is pleasing to see that the above firm are pushing their goods into all parts of the world. Trade certainly follows the flag to a great extent.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

TO keep up with the demand on railway construction and renewal account will severely tax the capacity of Canada's two rail mills. Already it appears orders are being sent to outside mills, because of the impossibility to get them filled in time at either Sault Ste. Marie or Sydney. The Grand Trunk Pacific Railway Company recently gave a contract for 5,000 tons to the United States Steel Corporation. Two other lots, of 5,000 tons and 8,000 tons respectively, have been purchased in the United Kingdom, and a press agency reports Canadian inquiries in Scotland for quotations on a 30,000-ton order. On the C.P.R. system track-laying is going on. The portion of the main line between Winnipeg and Fort William is being double-tracked, though for the completion of that work three years will be required. On the company's branch line from near Kleinburg to Sudbury construction is being pushed rapidly along. At the recent annual meeting a resolution was passed providing for the building of 127 miles of branch line from Wolseley to Reston. On the Canadian Northern a great tonnage of rails has been laid in the last twelvemonth, and the work of extending the system is being hurried forward. On the western division of the Grand Trunk Pacific the contract for building 275 miles of track from Portage la Prairie onward has been let. Rails for the company's Lake Superior branch must be obtained in Canada and, if possible, in Ontario. If they are obtained elsewhere the Ontario subsidy of $2,000 cash and 6,000 acres of land per mile will be forfeited. As the branch is 200 miles long, it will take sixty days' output of a 500-ton mill, working to its full capacity, to supply the rails. Companies that are free to buy outside find it increasingly difficult to get rails there. In the United States the mills have their output sold months ahead, as the great prosperity not only enables, but forces, the railways to make improvements in their roadways. British makers are beginning to share in the benefits of the revival, though for a time they found trade dull. The state of trade at the rail mills is a pretty fair gauge of the condition of general business. If the rail mills are crowded with orders it is because the railways need the steel and can afford to buy it. Their need for it would not impel them to overwhelm rail manufacturers with orders if the pressure of traffic were not irresistible. And, of course, the traffic is the consequence of large production and active trade.

The Western Milling Co. is erecting a brick mill at Calgary with a capacity of 500 barrels daily.

The Toronto Gasoline Engine Co. intend removing their plant from Toronto Junction to Toronto.

The town of Chatham is considering the spending of $35,000 on the enlargement of its electric light plant.

A by-law has been carried by the town of Harriston to loan the sum of $10,000 to the Canada Stove Works.

The building occupied by the St. Lawrence Iron Works, Montreal, was destroyed by fire last week, entailing a loss of $6,000, partly covered by insurance.

Woodstock, Ont., has passed a by-law voting $50,000 improvements for water works plant. A large reservoir will be built.

Negotiations are on for the taking over of the buildings at Port Hope recently occupied by the Canada Radiator Co. by a new industry which will employ a large staff of men.

Port Elgin has carried a by-law to raise $40,000 to build a square line of railway connecting the Grand Trunk with the harbor, and also for the establishment of a sawmill.

The Dominion Natural Gas Company by an agreement signed and delivered will come into control of the Galt Gaslight Company's plant on October 1. The Dominion people have leased the Galt plant, and so soon as the mains are laid to the town, about November 1, will supply consumers in Galt at 35 cents per thousand.

The report of lake commerce through canals at Sault Ste. Marie for the month of August as compiled by the engineers' corps, U.S.A., gives the total freight passing through the United States and Canadian canals as 6,327,595 net tons. Three thousand and eighty-eight vessels passed through having a registered tonnage of 5,038,651.

The construction of the power plant at Kaministiquia Falls near Fort William by the company organized by Messrs. C. R. Hosmer, H. S. Holt and F. W. Thompson will now be rushed as rapidly as possible. The company has let contracts to the Canadian General Electric Company for the generators, exciters, switchboards, etc., the total cost being, it is understood, in the neighborhood of $200,000.

Contracts have been let for the erection of the new factories at Welland for the Plymouth Cordage Co. The buildings will be of brick with concrete foundations, and the company's entire frontage along the Welland Canal will be used for wharves on which large warehouses will be erected. A large number of dwellings will also be built for the use of employes, of whom there will be about four hundred.

There are now fourteen iron and steel-making companies with which ledger accounts are kept by the Department of Trade and Commerce at Ottawa. The names of these companies with the total amount which each has received in bounties during the last seven years—1898-1905—are as follows: N. S. Steel Company, $276,278; N. S. S. and C. Co., Limited, $596,693; Mineral P. Co., Pictou, N.S., $7,378; Dominion I. and S. Co., Limited, $2,252,455; Canada Iron Fur. Company, $447,657; Ontario Rolling Mills Co., $18,712; Hamilton Blast Furnace Co., $203,080; Hamilton S. and I. Co., Limited, $846,144; Deseronto Iron Co., $133,134; John McDougall & Co., $26,264; Electric Reduction Co., $2,222; Algoma Steel Co., Limited, $328,740; Londonderry I. & M. Co., $64,493; Montreal Roller Mills, $1,545; total, $5,204,755.

It is announced that the B.J.E.R. Co. will still further increase the capacity of its plant at Lake Beautiful by the addition of another unit to the plant at that place, involving an expenditure of $100,000. At the Vancouver power house a converter and two transformers will be put in. At present the power generated at Lake Beautiful is equivalent to 9,000 horse-power and these improvements will raise the supply to 12,000 horse-power. The additions are being made because of the increased demands upon the company.

A Detroit manufactucer of machine specialties proposes to build a modern branch factory at Walkerville. Three hundred hands will be employed. In an interview he said: "Canadians owe it to themselves to adopt the most economic methods in producing power. The development of the waterpowers will be worth millions to the country, for every horse-power developed is equivalent to five pounds of coal per hour. With the capital turned into local channels which now goes to the United States for coal, the country will profit inestimably."

The Dominion Copper Co., successors to the Montreal & Boston Co., have resumed operations in the Boundary district, under the management of Samuel Newhouse. The principal work at the present time will be in the line of development to permit of the shipment of 1,000 tons of ore per day to the company's smelter. This smelter will resume operations within a few weeks in order to determine the best method of treating the ores. The management have practically decided to build a new smelter, as the old one, which is said to have cost about $200,000, is inadequate, and is not adapted to economical operation. Indeed, the records show that the smelting operations of the old Montreal & Boston Co. were not profitably conducted. The new smelter will be built either at Great Falls, where the Granby smelter is situated, or at Midway.

Companies Incorporated.

The Mouterde's Electric Accumulator Co., Limited, of Montreal, have been incorporated with a capital stock of $250,000, for the purpose of manufacturing and dealing in electric machinery, etc.

The North River Power Company, Limited, of Montreal, have been incorporated with a total capital stock of $90,000 for the purpose of dealing in electrical machinery, construction work, etc.

Coleman Cobalt Company, Limited, of Toronto, have been incorporated with a share capital of $250,000 for the purpose of carrying on in all their branches the operations of mining and milling. The directors are Albert Robert Moore, Hamilton Bender Wills and John Jennings, all of the city of Toronto.

The Canadian Tool Company, Limited, of Woodstock, Ont., have been incorporated with a share capital of $200,000 with the right to manufacture, buy, sell and deal in tools, machinery, engines, and other articles made from iron, steel and other metals. Directors are to be: Edwin George Law and Joseph Stickney, both of Toronto, Arthur James Downing, James Jackson Terry and Theophilus Leroy Wilson of Woodstock.

NEWS OF THE TRADE.

The Fraser Hardware Company has opened a store at Preston under the management of Mr. N. Kreig.

Harry Cockshutt, of the Cockshutt Plow Company, Brantford, has returned from an extended business trip to Australia.

Capt. Thos. Douglas, lately of Douglas, Prowse & Co., Halifax, has joined the board of directors of Wm. Stairs, Son & Morrow, Ltd.

George Bray, of Bagby Works, Leeds, England, the well-known inventor of a patent gas-burner, died at his residence in that city August 22nd, aged 60 years.

J. A. Chambers, who has retired from the managership of the Vancouver branch of the Canadian Rubber Company, Limited, was presented with a fine office desk and chair by his employes on leaving.

W. B. Arthur, formerly of W. B. Arthur & Co., wholesale hardware merchants, of Halifax, N.S., will in future represent Caverhill, Learmont & Co., in Nova Scotia, with headquarters at Halifax.

W. H. Prowse, of the late firm of Douglas, Prowse & Co., has opened up a general brokerage and commission business in the Furness Building, head of Furness Wharf, Halifax. Mr. Prowse also imports heavy hardware and makes a specialty of lobster packers' supplies.

T. J. Agnew, Prince Albert, Sask., announces the reformation of his hardware business under the name of the Agnew Bros. Hardware Company, Limited. He has admitted his brother, Andrew, into partnership. The new firm came into existence on the first of the present month.

One of Gananoque's leading citizens, William Bulloch, president of the Bulloch Co., manufacturers of rivets and wire nails, died a few days ago in his 73rd year. He was one of the first wire nail manufacturers in Canada, and for years was the sole manufacturer of tubular rivets in Canada, from which he made his fortune.

The Sibley Scythe Co., of Newport, N.H., have appointed Messrs. Geo. E. Smith & Co., the wholesale hardware dealers, of Halifax, as their sole agents in Nova Scotia and Cape Breton, for their famous grass scythes. Messrs. Smith & Co. have been very fortunate in securing good agencies. They also represent Messrs. Nobles & Hoares, of London, Eng., manufacturers of high grade carriage varnishes, and of the Never-Slip Manufacturing Co., of New Brunswick, N.J., manufacturers of the "Never-Slip Horse Shoe" and rubber horse pads.

Mr. Alexander Macpherson, of the Gutta Percha and Rubber Manufacturing Co. of Toronto, Limited, Toronto, Canada, is at present on a business visit to Australia. He has appointed Brown & Dureau, of Melbourne and Freemantle, and Mr. J. T. Brown, of Sydney, as his firm's Australian representatives. The agents are showing a full range of the various lines, which comprise the well-known "Maltese Cross" and "Lion" brands rubber footwear and sand shoes, a complete line of hose and belting, interlocking rubber flooring, packings, "Fisk" tires, Canadian "Haskell" balls, etc. Mr. Macpherson expects to return to Canada via Europe in about a month. —Australasian Hardware.

No. 22. OSHAWA, ONT. SEPT. 23, 1905

AN INCIDENT.

A few days ago one of our managers met a representative of a firm who make metal lathing. After extending fraternal greetings the conversation drifted into "business," as it invariably does. Our opposition (a fine fellow) was questioning the wisdom of Pedlar's selling lath at 10c. per yard when he could as easily get 20c. (that proves its merits) and so make a great deal of money.

We met this argument with what we think is a better one : That we would not sell one-tenth the quantity ; that we did not make it to look at, that we made it to **sell, and were selling it,** every hour in the day, every day in the business week ; that we were selling probably 5,000 yards per day for **private dwellings.** We asked our friend if he ever sold any lath for a private dwelling. He answered, "No ; not often." "If you sold it at 10c., would you ?" "Yes !"

Now, there is the point. Pedlar's Perfect Expanded Steel Lath is made by us and sold by us at a price that admits it into any structure. **It's as cheap as wood.** We had not left our opposition friend three minuies when our postman handed us this letter :

GRAND MERE, 15/8/05.

THE PEDLAR PEOPLE,
Montreal.

DEAR SIRS,

Please send at once, by Great Northern Railway, 555 square yards "Perfect" Lath. Send from Montreal and inside of one week, or cancel order and advise. As I am introducing your lath here I will ask your best discount.

Yours truly,
J. O. H. RICARD.

Now, this order is from the backwoods of Quebec, in the Laurentian Mountains, where there is enough timber to rebuild all Canada, and yet these people **want a fire-proof material.**

Montreal, P.Q.—Charles Nicoll, 85 St. Peter St.

BUILDING AND CONSTRUCTION

MONTREAL STRIKE AT AN END.

THE strike of the carpenters and joiners of Montreal which was declared on June 27th last, has at last come to an end, and there are no more idle strikers in the city.

As will be recalled by readers of Hardware and Metal the strike arose from the demand of the carpenters and joiners for an increase of pay from 22½ to 30 cents per hour. This the master carpenters refused, and some of the firms affected have persisted in the refusal, and are still regarded as "unfair" by the unions.

Both sides claim a victory in the struggle. The officials of the United Brotherhood of Carpenters and Joiners assert that the strike has resulted in raising the wages to 30 cents an hour, and in strengthening the union, while the Builders' Exchange has issued a statement that the men now employed are paid simply on their merits, without reference to any artificial schedule of wages. The master carpenters, say the directors of the Builders' Exchange, are now paying from 22½ to 27½ cents per hour, and in a few cases 30 cents. They therefore claim that they have gained the essential points they set out to establish, "free employment of labor, according to capability and non-recognition of the claims of the union to dictate either an artificial standard of wages or other conditions."

Building operations in Montreal are exceedingly active just now, and in some cases night gangs are actually being put to work, something which has never been done in the city before.

MONTREAL HAS A BUILDING BOOM

Last week was an unusually good one for the building trade in Montreal, the permits issued being far above the average both in number and amount. The estimated value of new buildings for which permits were taken out, is no less than $307,230.

The volume of building operations in Montreal this year may be gauged from the fact that up to date, 1,329 permits have been issued by the Building Inspector for the current year, as against 1,335 for the whole of last year.

LARGE BUILDINGS FOR MONTREAL

Two building permits aggregating $261,000 were issued from the Building Inspector's office at the City Hall, Montreal, last week. Both buildings are to be erected in the uptown section of the city. The one which will cost $161,000 is the new and magnificent Nurses' Home for the Royal Victoria Hospital. It is to be fireproof and the work of erection will be commenced immediately under the supervision of the architects, Messrs. E. & W. Maxwell.

The other permit is for what will be known to be the Lindsay building, on St. Catherine street, for $100,000. It will be built of sandstone of seven stories high, and when completed will be entirely used for offices. Mr. A. F. Dunlop is the architect, and Mr. Charles Thackeray is the general contractor. The work of construction on this building is also to be rushed. There were also a large number of smaller permits issued for dwellings and tenement houses which are to be erected in all parts of the city.

WESTMOUNT'S NEW CLUB HOUSE.

Messrs. Hutchison & Wood, architects, of Montreal, have let contracts for building a clubhouse and curling rink for the Heather Club of Westmount. The plans of the clubhouse show that arrangements have been made in harmony with the purpose intended. The rinks will have four sheets for curling, and the building itself will be of balloon frame with concrete for outside walls and Windsor cement on the inside, all reinforced with expanded steel lathing. This method is only in its infancy in Montreal, and the probabilities are that it will be used most extensively in the future.

BUILDING AT BRANDON.

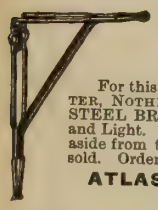
A half a million in new buildings and another $100,000 in city improvements will be the record of Brandon's prosperity this year. This amount will be reached and probably well exceeded before operations have closed for the season of 1905. Although scarcely up to the figures of last year, when the amount paid over for building operations and municipal work reached almost $700,000, which included an $80,000 wing to the asylum, this year's record is remarkably good. The largest building in this year's list is the new Y.M.C.A. building at $72,000, the remainder ranging from $35,000 down.

WINNIPEG'S NEW RECORD.

Already the magnificent building record established last year at Winnipeg is being approached, only about $200,000 being required to equal last year's total of $9,500,000. Last Monday twenty-six permits were issued for buildings aggregating in value $50,000. Comparing the figures with the corresponding date last year, it is found that this year's total exceeds that of last year by almost $1,500,000.

ARTIFICIAL BRICK.

Recently a large factory has been established in British Columbia for the manufacture of artificial sandstone bricks for building purposes. It is a recent German invention, in which sand and quicklime are mixed together in certain proportions, the latter hydrated in a mold in which a vacdum is produced, and as there is no space for expansion of the lime of hydration, the compression of the material follows. The brick is further compressed in stamps of high pressure and than passed into steam boilers in which a current of steam is kept up for 8 or 10 hours, causing a chemical combination of the sand and lime and producing hydrosilicate of lime. The lime acts as a binding material or cement, uniting the particles of sand together and producing a brick of exceeding hardness and practically impervious to moisture.



HANGING WINDOW SASHES.

SOMETHING decidedly original in the hanging of window sashes is described in a recent issue of the Scientific American. It consists in linking together the two sashes of the window in such a manner that the weight of one serves as a counterbalance for the other. No sash-cords, weights, or pulleys are necessary, and the disadvantages attending their use are thus entirely avoided. The space taken up by the sash weights is considerable, and in some cases architects find it almost impossible to make room for them. The cords, too, are in time weakened, either by wear on the pulleys or decay, and are liable to break. But aside from this the sash must fit loosely in its frame so that it will slide freely, with the result that the window is drafty and rattles in windy weather. That the new construction possesses none of these disadvantages will be apparent to all. The sashes are connected at their sides by levers, fulcrumed at their centres to the window frame. The upper sash is provided near the top with a pin at each side adapted to travel in a groove in the window frame, and the lower sash is provided with bolts, which serve as pins but which may also be pushed home to lock the sash in various positions. When the lower sash is raised its upper end swings outward and the upper sash is lowered, owing to the lever connections.

If desired, the lower sash may be swung out at the top without raising the bottom, which is bolted to the frame. A window may thus be locked open at night, providing an ample circulation of air without fear of sneak thieves. This arrangement, it will be seen, opens the window at the centre to admit air which, owing to the inclined position of the sash, is directed upward to prevent a draft. The impure air at the same time flows out at the top. A false sill is hinged to the lower sash, and this may be swung down to close the opening at the bottom of the window, if desired. When the window is closed the levers act to jam the sashes tightly against the parting bead, rendering the window watertight. If, in case of a driving rain, any water should leak past the parting bead, it would be caught in the grooves, and flow back to the sill. By avoiding the use of weights, the windows may be made 6 inches wider on each side, providing a material increase in the light area of such buildings as factories and the like. This window construction also offers the further advantage that the glass may be cleaned from the inside of the room. The bottom sash may be unbolted and drawn in to bring both sides within easy reach for cleaning. To clean the outside of the upper sash, a portion of the parting beading is removed by turning the thumb-screws, which permits the sash pins to slide out of the grooves. The sash may then be swung inward on the levers. The inventor of this improved window is an Australian, Alexander Knox, now of New York City.

NOVELTIES FOR AMUSEMENT.

THE accompanying cuts show several novelties now being manufactured by W. H. Johnston & Co., of Peoria, Ill., that have met with a very pleasing reception in the States, thousands of them being sold; the game "Lawnodd" is entirely new, and can be played by two, four, six or eight players; requires small space, and affords a vast amount of pleasure. The 999 Junior, shown above, was originally intended for children between five and ten years, but the speed and pleasure it gave the little ones attracted the attention of adults to such an extent that the manufacturers have been compelled to build them to carry one, two, three or four adult riders; they can be used in Winter or Summer, with wheel or runners, as shown. The sail was originally intended to be used on ice or snow, but has been very successfully used with the wheels. The manufacturers are desirous of placing these novelties on the Canadian market and as their patents are about to pass to issue in the States, they would be pleased to take up correspondence with some responsible Canadian firm who would manufacture them on a royalty under Canadian patents. All correspondence should be addressed to the firm name as above.

"999" on Runners.

This sailing carriage or land boat has been on the market for some time, and has met with a great deal of success. It usually proves a very rapid seller after it has been introduced in a community, one sale provoking a score or more.

WANT TAX REPEALED.

The Montreal branch of the Canadian Manufacturers' Association are doing their utmost to have the $300 tax on foreign commercial travellers repealed. At the first meeting of the newly elected executive last week it was decided to draw up a petition opposing the tax. This will be submitted to all members of the local branch, after which it will be presented to Provincial Treasurer Mr. J. C. McCorkill, with an urgent appeal to have the act killed.

BUILDING NOTES.

Contract for a new convent has been let at Sarnia.

A large opera house is to be erected at London.

A public hall is to be erected at Abbotsford, B.C.

James Curry is erecting a new mill at Burnamthorpe.

A new skating rink is to be built at New Hamburg.

P. Tipson, Brantford, is building a brick residence to cost $1,475.

W. H. Pennock, Victoria, B.C., has purchased a site for a new residence.

The Guelph and Goderich railway are to erect twelve stations to cost $150,000.

The B. C. Electric Railway Company are to erect an office building in Victoria.

M. Bussiere is to erect a $5,000 building and P. Savard a $1,500 structure at Quebec.

Dr. Morrison, Sarnia, is to erect a three-story block to contain three stores.

The Temple Realty Company, Vancouver, are to build a business block to cost $19,700.

A $50,000 Methodist church is to be erected at College and St. Clarens avenue, Toronto.

G. R. Taylor, Vancouver, is to erect an eight-room dwelling and fifteen cottages at Sechelt, B.C.

The Guelph Artificial Stone Company has secured the contract for a $4,000 Baptist church at Galt.

The Brantford Electric & Operating Company are to erect a new $10,000 building for an auxiliary steam plant.

Permits have been issued in Hamilton for residences to E. A. Depew to cost $2,000, to John McClemont to cost $1,800, to David Newlands to cost $1,800, and to W. J. Blackborough to cost $3,000.

It is announced officially that it is the intention of the Grand Trunk Pacific Railway Company to build and operate a number of hotels along its system. These hotels will constitute a chain from the Atlantic to the Pacific.

The contract price for the fine new buildings at the Ontario Agricultural College, Guelph, to be used for farm mechanics and implement demonstrations and which are to be erected by W. J. Whitham, of Brantford, is $39,100. Work will be begun at once.

Winnipeg is to have another big skyscraper. The Canada Life Assurance Co. has decided to tear down the present four-story building in the Spring, and start the erection of a steel structure that will total something nearly a million. Preliminary plans are already under preparation.

About $100,000 is being spent this year in new buildings in Virden. The two principal structures are the $25,000 public school and the drill hall and armory for the 12th Manitoba Dragoons at a cost of $10,000. Among other buildings are A. Megaffin's $4,000 residence; Megaffin's sale stable, $2,500; addition to F. Palmer's home, $3,000; new residences for A. G. McDougall, $3,000; additions to W. J. F. Frame's house, $2,000; John Bradley, $1,600; A. E. Smith, $2,000; J. A. Blakeman, cement blocks, $3,000; Arthur Mason, $2,000; M. McMullen, $2,000; W. H. Ireland, joinery works, $2,000; Mrs. McIntyre, $1,400; Frank Higgins, $1,400; Mr. I. J. Bennett, $3,000; C. Wogan-Wainewright, two brick cottages, $1,000; Thos. Hoskins, $1,000; A. C. McDougall, $1,200; E. Forster, $1,000; Fred Sandford, $3,000; Jno. Caldwell, $3,000; A. W. Jolly, $1,400; W. Manser, $1,400.

FALL PAINTING

It is conceded that the Fall is the best time for painting. Time, however, only influences results—It does not guarantee them.

The best time should be improved by the use of the best material. White Lead always has been and still is the most efficient and economical paint for house-painting.

Tiger  Brand

WHITE LEAD

is as pure a lead as can be made. Always uniform—it's one of the advantages in favor of White Lead—no mixture to take a dozen chances on. It's in the property owner's interest to use it. It's in your own interest to sell it.

STOVES AND TINWARE

A FIRELESS COOKER.

A NEW method for cooking by retained heat has been invented by Felix Kahn, of New York City, who has assigned the patents covering his invention to James S. MacCoy, of 1122 Broadway, New York City. In the cooking of foods as ordinarily practised there is a great waste of heat, care, and attention, an unnecessary amount of wear and tear on the cooking utensils, a large loss of food material, and too frequently an inferior quality of food, due to the drying and burning and the loss of the juices which give wholesome, nutritious, and palatable qualities to the food. This is due to the fact that the cooking is usually done by continuous application of the heat, which wastes 70 to 80 per cent. of the heat, occupies the stove with utensils for a needless length of time, and subjects the utensils to just that much more wear and destructive influence of the heat, as well as consuming an unnecessarily large amount of fuel.

The invention is an improvemeot over a former one, wherein the food which had been previously stewed or boiled was kept in a hot condition. By subsequent experiment it was found that after having first permeated food with heat at a cooking temperature, it was possible to stew or boil the same to perfection by the heat as conserved against loss by radiation, but that it was physically impossible to steam or dry-cook in that device by heat without the addition of a body of water. In the improved form of the device this is accomplished by placing a body of water in the bottom of the cooking receptacle, and providing a perforated rest which is placed over the water and which supports the pan or secondary cooking receptacle containing food. Substantially, the apparatus consists of an outer casing of metal and an inner casing of heavy tin. Between these are the non-conductors—paper, cylinders of dead air, and a body of fibrous material. The tight-fitting lid is similarly constructed. This effects a perfect retention of heat. As said above, in the bottom of the cooking receptacle is placed a quantity of water and a perforated support for the vessel containing the food. The manner of using the apparatus is very simple. An article of food prepared in the usual manner, and placed in the granite-ware cooking receptacle, is put on the fire until the contents are thoroughly permeated with the heat at a cooking temperature. The receptacle is then set into the heat-retaining part of the fireless cooker. This is closed and set aside for a period of time depending on the character of the food, and the same will then be found to be cooked to perfection. The fireless cooker has been exhaustively tested, about one hundred recipes having been put through this method by the Greater New York Cooking School with highly satisfactory results. For two Summers it has been used practically with great success by Mrs. Lemcke, proprietress of said school, at her Summer hotel.

The cooker is adapted for general domestic use, also for use in buffet and dining cars, steamships, yachts, automobiles, etc. One of its most interesting forms is the workman's dinner pail. It cooks while he works; he can have a hot meal wherever required.

THE ONE-HORSE FURNACE MAN.

LIKE all other business men, the stove dealer has troubles of his own, and particularly is this the case in the many small towns throughout the country. Here there are often men of a mechanical turn of mind, more or less regularly engaged in other pursuits, who set themselves up to instal furnaces and do occasional jobs in tinwork or easy plumbing. As these men do not keep up a store, and have no expense for light, heat, insurance, or help, their competition is by no means fair to the hardware man, who has to meet all these incidental expenses, as well as the cost of stock.

A citizen in a medium-sized Canadian town decides to put in a furnace, and, by some means or other, the whole town knows of it inside of twenty-four hours. The enterprising stove dealer immediately sets out to learn what kind of furnace is required, and prepares to quote a price on it, accordingly. First, he puts down the cost price of the furnace, then adds so much for his men's time on the job, and tacks on a moderate percentage of profit. He is then ready to lay his figures before the buyer.

But in the meantime the one-horse man has paused in the operation of sweeping out the town hall, of driving the local beer wagon, and also gets on the scent. If he is accustomed to pay regularly, he can get the same terms from the manufacturer as the dealer before referred to. He adds to this about the same amount for his labor as the dealer has done for his help, and he will be an unusual citizen who gives the contract to the dealer at an advance of perhaps twenty per cent. on the one-horse man's figures.

How is this difficulty to be overcome? Perhaps a good many of those who read this page have the same or a similar competition, and yet, through failure to acquaint themselves with the troubles of their fellow dealers in other towns, are under the impression that it is a purely local condition.

Here, then, is the necessity for organization clearly shown. The master plumbers have an agreement with the plumbing supply houses, by which the latter refuse to sell goods to anyone except master plumbers, and the difficulty now under discussion could be solved by a similar agreement with stove and furnace manufacturers. But individual stove dealers cannot hope to accomplish anything in this direction. In union is strength, and the united efforts of the Canadian hardware trade could do much to abate all such nuisances.

The Western Retail Hardware Dealers' Association, which includes in its membership nearly all the hardwaremen of Manitoba and the Territories, is doing a great work in shaping the destinies of the trade in the west, and the success of this organization should stimulate dealers in the older parts of Canada to try the merits of a trade association. The time is ripe for such a movement, and, if undertaken, the heartiest co-operation of Hardware and Metal is assured.

THE WESTERN BUSINESS.

REPORTS from the western country are very favorable, and the outlook for a large volume of business in ranges, heaters, etc., during the coming Fall is exceptionally bright. Prospects depend largely upon the crops, and as these are large dealers can look forward to prosperous times.

The crop is so large and the prices are so good that the farmer will not only have cash as soon as he sells something, but he will feel like buying the new heater that has been wanted for several years, perhaps. He will not feel that economy is necessary, and will buy a high-grade stove, of good size, not worrying about the slight additional cost that the bigger firebox or more nickel might cause.

When the farmer is prosperous it goes without saying that the rest of us are feeling pretty well financially. The carpenter, the mason, the blacksmith and every working man is busy. They have money and can buy what they need.

While the Fall is the heater time of the year, the indications are that cooks and ranges will be little, if any, behind the other class of stoves. The trade has ordered cooks and ranges liberally, feeling that with the general prosperity it is not unlikely that a large number of these can be placed. This is likely to be the case. The consumer has the money, and with a little urging is just as likely to put in a new range as he is a new heater—especially where the latter is not an absolute necessity.

TIN IN SOUTH AMERICA.

UNTIL lately tin ores were considered rare in Peru, the only deposits known to exist being those described by Professor Raimondi in the district of Moho, Province of Huancane, Department of Puno, in which locality the eminent authority referred to encountered a new ore deposit containing sulphur, lead, tin, and antimony. Mineral veins and vainlets containing tin were afterwards described by Engineer Carlos Posth as existing in quartz formations in the Pataoca and Acaobina spurs of the Andes in the Vilque district. Nevertheless as molybdenum, a mineral which usually accompanies ores containing tin, is widely distributed in Peru, it has long been prophesied that

The New

National Oak Heater

for Hard or Soft Coal, Lignite, Coke or Wood.

Smoke consuming. Double Heater from floor. Duplex Grates. Double Mica Door. Straight, Deep Firepot. Deep Reflector Ring. Hot Blast Ring is entirely outside—does not obstruct interior. Smoke Pipe Collar is in rear of double-heating collar. No Elbows or Offsets required to connect with double-heating flue.

THE MOFFAT STOVE CO., LIMITED

WINNIPEG WESTON, ONT. CALGARY

No other manufacturer in the world has a stove just like this. In brief, it's the biggest, tallest and best stove of its kind ever offered. Places you absolutely beyond competition. Seize the opportunity and write for the agency to-day.

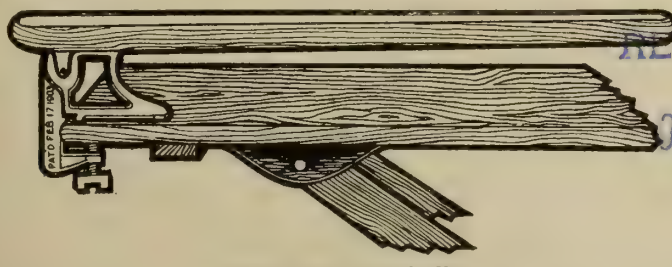
BASE BURNERS

ARE NOW IN DEMAND

The base burner you want to buy is the base burner that will sell—the one with some individuality.

The GRAND IDEA is just a little different from anything else on the market.

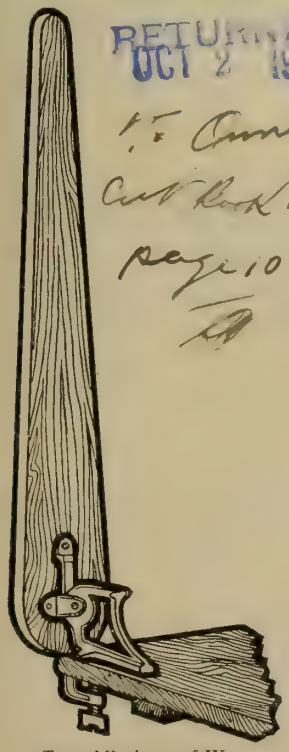
A LITTLE BETTER AND A LITTLE MORE UP-TO-DATE.



The GUELPH STOVE CO., Limited

Guelph

tin would be found in other Provinces of the Republic. This has actually happened, inasmuch as among some samples of ore sent to the School of Engineers by Doctor Azzali to be analyzed, one of these, which came from the Province of Cajatambo, was rich in metallic tin.



AUXILIARY IRONING BOARD.

A NOVELTY which should find a ready sale is being sold by W. H. Glenny & Co., Rochester, N.Y., being a most substantial and satisfactory auxiliary to table or regular ironing board for quickly ironing sleeves, shirt waists, children's clothing and other small articles.

Ironing Board Ready for Use.

The turn-back feature is its great convenience. It allows for this auxiliary ironing board being where it is wanted all the time. Besides these features it is very strong and very nicely made from hard wood with rounded edges, tapering in shape. The iron part is aluminum finish to prevent rusting. It is not a

Turned Back out of Way.

cheaply constructed article, but one built for everyday use and for universal satisfaction.

NON-EXPLOSIVE METAL POLISH.

The liquid polishes as sold in tin cans or bottles are made from such materials as the following. Although in a liquid form, it does not necessarily follow that a liquid polish is less economical than pastes, because the efficiency of both is dependent upon the amount of stearic or oleic acid they contain, and a liquid such as below is as rich in this respect as most of the pastes, especially those kinds containing much mineral jelly and earthy matters which are practically inert, and can only be considered as filling material. Thus it is a fact that an ounce of fluid polish may possess more polishing potency than an equal weight of the paste. Proportions are: 16 lbs. crude oleic acid, 4 lbs. tasteless mineral oil, 5 lbs. kieselguhr, 1½ oz. lemon oil. Make the earthy matter into a paste with the mixed fluids and gradually thin out, avoiding lumps. Apply with one rag and finish with another.

PASTE STOVE POLISH.

A paste polish for grates and fenders which will not dry to a hard and shrunken lump in the tins, may be got with this mixture: 99 lbs. resin spirit, 12 lbs. ceresine wax, 10 lbs. Japan wax, 10 lbs. bone black, 10 lbs. plumbago, 2 lbs. powdered copperas, 1 lb. petroleum jelly. Liquefy the waxes, then cool and thoroughly mix the other ingredients with it, to produce a non-lumpy paste. To be applied with one brush or cloth and polished with another.

NEW FOUNDRY BUILDINGS.

Forwell Bros., Berlin, are preparing the plans for their foundry site and buildings will be erected as soon as possible on the lot in Woodside Park. The two main buildings of the foundry will be of brick; one 52x100 feet, and a second 35x100 feet. There is to be a stock shed 20x65 feet and a metallic supply shed 18x115 feet. These buildings will cover over 12,000 square feet.

STOVE ITEMS.

The James Smart Manufacturing Company, Brockville, have secured the contracts to heat the R. C. church and the Presbytery at Wyoming.

The short periods which in the early and later part of the year serve to connect the two great seasons of Summer and Winter trade, are usually somewhat depressing times. Just at the present we are giving a lingering farewell to the Summer. Grumbles and sighs are indulged in as the unsold Summer goods, the lawn mowers and the freezers, &c., are stowed away to await the return of the Spring, and as it is almost too early to put on show a full range of Winter goods, the time is very opportune for a special show of a few good selling novelties and catchy lines. When times are bad and the ordinary stock hangs fire it is a good plan to awaken interest with a few novelties which, having some unusual characteristic, are bound to arouse curiosity and arrest attention.

SOL-A-RINE

Walker "Pilot" Steel Range

OUR MOTTO :

"Quality will be remembered when price is forgotten"

Dealer's Profits. The dealer's profit on the sale of a **Walker "Pilot"** is frequently double what the ordinary range affords, and the price to the consumer meets competition.

Cut showing ***Walker "Pilot" Range*** with High Shelf and Reservoir. Note handsome appearance obtained by adding the ***Walker Hearth Construction,*** an entirely new feature in steel ranges.

Quality. The **Walker "Pilot"** Range is complete with all modern and desirable features, and is properly and honestly constructed of the best material, and has proved itself satisfactory wherever sent.

Sales Assistance. We assist the dealer in every possible way in the sale of the **Walker "Pilot"** Range, and are ready at all times to work with them for our mutual advantage.

This Combination of **Profits, Quality** and **Sales Assistance** will easily permit you to control the Range Trade of your locality, and to build up a business larger than heretofore thought of, and a money-maker that will make your heart glad.

The Walker "Pilot" agent is going to be **the** stove-man of your town, therefore it will be well to obtain agency before it is too late, and order on a sample range for your floor.

If you have not got a copy of our catalogue on file, send for it. It is free and shows other money-making lines.

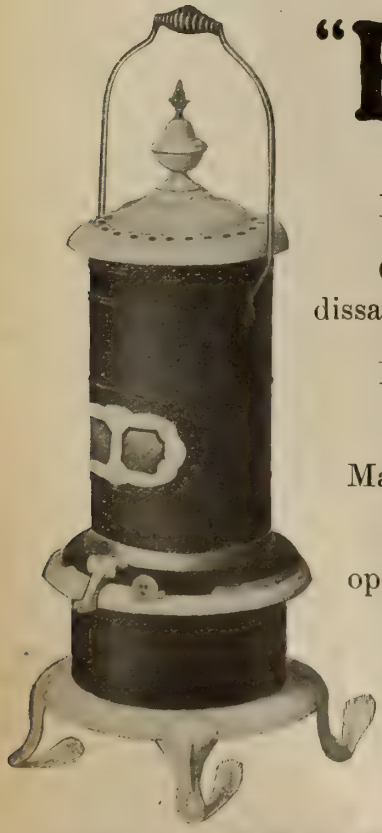
Our Guarantee Bond which goes with every Range

THE IMPERIAL OXFORD RANGE

Talks for itself

The Oven Has No Equal Scientific range construction has reached its highest mark in the Diffusive Flue, which not only heats the oven evenly but gives it perfect ventilation.

Advantages of the Draw-out Duplex Crate The Draw-out Duplex Grate used in the coal-burning range is remarkable in its utility, and minimizes the trouble of making repairs. No disturbance of the firebox linings is necessary. For wood-burning a bottom grate, front grate and grate lock can be applied to a coal-burning range.



Great Fire-Box Capacity The firebox is accurately proportioned to the oven size and gives all the heat that can be needed. The water-front is exceedingly powerful, and where a water-front cannot be used the reservoir supplied is specially designed to keep a large quantity of very hot water constantly on hand.

But—let us send you our handsomely Illustrated Catalogue.

WESTERN HARDWAREMEN.

SECRETARY McROBIE, of the Western Retail Hardware and Stove Dealers' Association, writes Hardware and Metal from Regina, giving some account of the progress which is being made in the work of organization. During the last three weeks he has been at work in Saskatchewan, and evidently he is finding the trade in the new Province as favorably disposed toward the association as are the hardware dealers in Manitoba. The Arcola line is now thoroughly organized, and work will be commenced now on the Prince Albert branch. Prospects in Saskatchewan are very bright.

JUDGES' SALARIES TOO SMALL.

MUCH surprise has been expressed in some quarters on account of the intended resignation of Hon. Justice Wallace Nesbitt from the Supreme Court, but in well-informed circles it is only the expected that is likely to happen, it being generally recognized that the salaries paid to Canadian judges are entirely insufficient for them to live according to the standard of the position owing to the increased cost of living, especially in the large centres of population. It is but a couple of years since Judge Nesbitt forsook the practice of law for the Bench, doing so only because he was promised that much larger salaries would be paid to occupants of judicial positions in the future.

When the recent increases were passed by the Dominion Parliament, however, it was pointed out by the MacLean Trade Papers that the increases were entirely too small. It is understood that Justice Nesbitt protested, and has finally found it necessary to resign from the Bench owing to his inability to secure a guarantee that the salaries paid to Canadian judges would be increased to a point where they would compare favorably with the remuneration given occupants of the Bench in Great Britain, the United States, and Australia. In all of these countries the scale of salaries is nearly double that paid to Canadian judges.

Since the announcement of Judge Nesbitt's determination to re-enter private practice three of the best known lawyers in Toronto are understood to have been offered the vacancy, but none of them could afford to accept at the present salary. It is to be hoped that at the next session of Parliament steps will be taken to still further increase the salaries paid to Supreme Court judges, as the position requires the ablest men produced in the Canadian law courts. Before his appointment to the Bench Justice Nesbitt was recognized as one of the ablest lawyers in Canada, and his income was said to have been fully $25,000 per year. It has, therefore, been a great sacrifice for him to occupy the Supreme Court position, and as he has not been away from his private practice long enough to lose his connection it is almost certain that he can look forward to an annual income of about $50,000 during the next ten years if he resumes the practice of law.

That the payment of higher salaries will result in the acceptance of judicial positions by the ablest lawyers is indicated by the newspaper reports stating that there are about forty applicants for a vacant Senatorship in the Maritime Provinces. The increased salaries paid to Senators and members of the House of Commons has certainly encouraged a larger number of men to seek these positions, and of the increased number of candidates a better and more representative class of men are certain to be selected. The same result would follow the payment of respectable salaries to judges, as while the honor of the position and the certainty of annuity after a long term of service is of great value, we cannot expect men capable of earning from $15,000 to $50,000 per year to give up this income for the salaries now paid to judges, the highest of which according to the new scale adopted is $9,000 per year. It must be remembered also that lawyers in private practice enjoy greater freedom, and have better opportunities for financial investment than occupants of the Bench. These points undoubtedly weigh greatly with lawyers when offered appointments to judgeships.

If the prestige of "British justice" is to be maintained Canada must pay her jurists salaries equal to the amounts which private corporations are willing to pay for similar service. In the past this has not been done, and the resignation of Justice Nesbitt, while a distinct loss to the community, will not have been without a corresponding benefit if it impresses upon the Government the necessity of adopting a scale of judicial salaries in keeping with the higher cost of living and capable of favorable comparison with the remuneration given judges in other countries.

PROBLEMS OF BUYING STOCK.

THE bane of the retail merchant is the slow selling article. Some merchants have the faculty of collecting a supply of this class of merchandise, which operates very materially against the profits of the business. A man of course cannot always tell what the demand for the goods he carries on his shelves will always be like, for he must take chances, and if he sold only those goods which are staple articles and which every other dealer handled, he would miss many opportunities to make money; but it is in estimating the size of the demand that he will be able to make for the goods that the secret of successful merchandising lies.

The average salesman introducing a new line is very prone to urge his customer to purchase more than he actually needs, for he figures that if the dealer has a large supply on hand he will make an extraordinary effort to push the goods. With this idea in view, special deals involving discounts for quantities are offered, and here is where the good merchant shows his calibre. He realizes that there is no money in tying up a lot of his capital for the sake of making an extra two or possibly five per cent., when he could invest the money in something which will turn several times in a year, and he will refuse to take advantage of these extra concessions and will buy conservatively.

The temptation is often very strong to load up on a certain article, but the man who has the courage and stamina to stick to the policy of buying only what he needs will have his capital in such shape that he has a big advantage over the man who is always looking for the extra quantity discount.

The advantage of taking a number of side lines into the hardware stock is that the merchant always has something to work on then. If he can't sell anything in the regular hardware department maybe he can put out a few clocks or a few watches, or some fine silverware or some glassware. There is no hard and fast limit set down for the hardware stock. Anything that he can sell legally the hardwareman has a right to handle.

MANUFACTURERS AT QUEBEC

Notes on the Annual Convention in the Ancient Capital.

IN certain respects the 34th annual convention of the Canadian Manufacturers' Association, which opened in Quebec on Monday, 18th September, was not attended with the full measure of success that usually characterizes both business and social functions of the organization. The registration list showed an attendance of only a little over 150 delegates, whereas 100 to 150 more were expected. Then the weather was decidedly unpleasant. On Monday there was a sort of combination of Scotch mist and genuine Canadian rain. On Tuesday the rain ceased, but the clouds and muddy streets remained.

But the moderate attendance and the weather did not after all seriously affect either the business transactions or the social functions of the convention. In spite of these things the convention was a success. The large proportion of the members of the association who came to Quebec evidently did so for the purpose of attending the business of the convention. Consequently the attendance at the business meetings was possibly as large as if the registration of delegates had been larger.

* * *

The pre-arrangements of the good people of Quebec were excellent. They could scarcely have been better, and the proof is that everything went off without a hitch. The handsome and spacious city hall was practically deeded over to the association for the purposes of the convention. The council chamber, from the windows of which could be seen the St. Charles River and the famous Laurentian Mountains, was set aside for the regular meetings of the convention while the committee rooms were reserved for section meetings and the secretary's offices. And what applies to the arrangements for business applies with equal force to the social functions. Mr. G. A Vandry, chairman of the Quebec branch, and Mr. Geo. E. Amyot, vice-president for the Province of Quebec, spared neither time nor pains, and much of the success of the convention was due to their labors. The association can scarcely forget the Quebec convention.

* * *

The stove manufacturers want a specific instead of an ad valorem duty. They contend that the Customs duty as it at present stands does not give them sufficient protection on the cheaper classes of stoves. On the better classes of stoves they are quite competent to meet competition from the United States or any other country. And this was the sum and substance of the business that occupied the attention of the Stove Manufacturers' section. And they all appear to be agreed as to its necessity.

* * *

The convention proper opened on Monday afternoon at 2.30. President W. K. George occupied with becoming dignity the imposing chair, or rather, throne, of his worship le Maire of Quebec. Secretary Younge, with equally becoming dignity, occupied a seat at his right, and the benign finance minister of the association, Treasurer Booth, sat at his left. while on the front benches, taking a fatherly interest in the proceedings, were ex-President W. K. McNaught, fresh from his victories at the Canadian National Exhibition; Vice-President Ballantyne, Montreal; ex-Secretary T. Russell, Toronto; Mr. George Amyot, Quebec, and other veterans.

* * *

President George did not waste any time in preliminaries, but at once got down to business, the report of the treasurer being the first item on the programme. Treasurer Booth does not present his report after the manner finance ministers do their budget speeches. He

Mr. C. C. Ballantyne, Montreal.
The New President of the Canadian Manufacturers' Association.

does not attempt to make things appear better than they really are. He did not mince matters when he said that while there was a balance in the bank of $4,250 at the end of the financial year, and that the association possessed a surplus of over $6,000, the expenditures had increased at a greater ratio than the membership, rapid as that increase had been. He was so earnest about this that he asked for an expression of opinion from the convention as to the advisability of increasing the membership fee. This led to the most important discussion of the afternoon. The consensus of opinion was in favor of something being done, but just what demanded careful consideration. It was felt that nothing should be done that would tend to impair the membership. As one delegate said, "What we want is members. It will have more effect with the Government when we are impressing our views upon it." As no alteration in the fees can be made for another year, the question was relegated to the executive committee for consideration. If the opinions expressed can be taken as a criterion, the increase in the membership fee will be largely borne by the larger employers of labor.

* * *

Secretary Younge's report was noted for two or three suggestions it made. One was to the effect that although the membership of the association had increased by 328 during the year "it was absolutely necessary for something to be done to increase the membership fee." In this it will be seen he concurred in the suggestion of Treasurer Booth. The other was recommending the appointment of a traveling secretary. In fact, he pointed out that the present staff of 25 employes needed enlarging, while the present headquarters offices were inadequate for the present requirements of the association.

* * *

The consensus of opinion among the members was favorable to Mr. Younge's recommendations, and that referring to the appointment of a traveling secretary was referred to the finance committee, who will in turn report to the executive committee.

* * *

The report of the parliamentary committee, whose duty is to keep an eye on Provincial and Federal legislation, showed that that committee had not slept—at any rate, when it should have been awake. And by keeping awake, some objectionable legislation had been prevented. There was one thing, however, which the committee had not been able to prevent, and that was the tax which British Columbia and Quebec had imposed on commercial travelers. The report deprecated the tax and the members of the convention who spoke in regard thereto endorsed its sentiments. Mr. George Amyot, of Quebec, was cheered to the echo when he declared that each part of the country should do business with the other, without the legislative barriers as that described in the report. Mr. Edward Gurney, of Toronto, declared that all trade legislation should be in the hands of the Federal Parliament. His sentiment was also warmly applauded.

* * *

Before 10 o'clock on Tuesday morning the convention was at work again considering reports. The report of the Fire Insurance Committee recommended that authority be given that department to

conduct an insurance brokerage for placing the insurance of the members of the association and was productive of a great deal of discussion. Mr. G. M. Marter strongly opposed the proposition, urging that they would be antagonizing the insurance companies, while, before the insurance branch of the association could place business, it would be necessary to become the agent of one or more of the existing insurance companies. The discussion was profitable as well as interesting. It was shown that in consequence of the Toronto conflagration increased rates were arbitrarily imposed throughout the country on risks that were altogether dissimilar from the class destroyed by the fire. Mr. McGibbon, of Montreal, made the assertion that rates in Canada are two to three times higher than in the United States, which, in view of the fact that the latter were their competitors, seriously militated against the Canadian manufacturer. The consensus of opinion was that a campaign of education in regard to insurance would be of great benefit to the members of the association and that a great step along this line would be made if Mr. Heaton, the manager of the fire insurance department, or his staff would visit their factories.

Mr. Fleury, of Aurora, Ont., pointed out that as a result of suggestions made to him by Mr. Heaton he was securing a much lower rate than formerly.

The Insurance Committee will be permitted to do what it deems best in regard to the brokerage proposal.

* * *

What is generally conceded to have been the best report submitted to the convention was that presented by the Railway and Transportation Committee showing that the efforts of the committee had been productive of results most beneficial to the members of the association. For example: On behalf of the Metallic Roofing Co. the committee had made representations to the Board of Railway Commissioners in regard to classification of metallic shingles, and the result obtained, according to the statement of the manager of the company who was present, was the saving of about $3,000 a year in freight rates.

One point in the report which occasioned some little discussion was in regard to the owners' risk condition and penalty clause imposed by the railways, and was raised through a question by Mr. W. S. Fisher of St. John. Several of the delegates expressed the opinion that the clause was illegal and instances were given in which, where shippers had refused to be governed by it, the railway companies had not enforced it. Although the matter has been before the board of railway commissioners for some time a deliverance has not yet been made upon it.

PERSONAL MENTION

Ontario.

Mr. McCurdy, of McCurdy Bros., Stratford, was in Toronto this week.

Suckling & Co., Toronto, are advertising the assets of the Dominion Fence Co. for sale.

James H. Randall, tinsmith, a well-known resident of St. Catharines, died suddenly last Monday.

Jos. Heard, Fenelon Falls, has returned from a long holiday in the country, much improved in health.

Frank Leslie, of P. Leslie & Son, hardware merchants, Alexandria, entered the ranks of the benedicts last Wednesday.

Thomas Elliott, formerly a hardware merchant at Perth, Ont., was a caller at the Toronto office of Hardware and Metal this week.

Charles E. Paton, of the firm of James W. Paton, Adelaide street, Toronto, has just returned from a ten days' holidays.

Mr. Short, manager of Revillion Bros., Edmonton, has been in Toronto for about a week. Mr. Short will also spend a few day in Montreal.

Samuel Graham, representing W. R. Humphreys & Co., Limited, cutlery manufacturers, Sheffield, has been in Toronto with his samples during the past week.

The Gutta Percha and Rubber Mfg. Co., Toronto, have gotten out a neat advertisement in the form of a clock illustrating their "Maltese Cross" brand of rubber.

John Lemmon, of the firm of Lemmon & Lawrenson, hardware merchants, Kingston, has purchased the interest held by the latter partner. The firm will hereafter be known as Lemmon & Sons.

W. G. Syffert, late with A. J. Colvin, has opened a hardware store at Galt, where he will carry a full and complete stock of guns and ammunition, stoves and ranges, small hardware, etc.

Rumors are current of the proposed establishment of a new wholesale and retail hardware store in Toronto. A firm of lawyers are said to be working on the securing of a charter for the company.

Mr. Turnbull, of Turnbull, Howard & Co., Brantford, was at the King Edward Hotel, Toronto, for a couple of days this week. Mr. Turnbull had been down in Montreal trying conclusions with the Westmount Bowling Club.

Thomas R. Wood, vice-president of the Ontario Lead and Wire Co., Toronto, died a week ago at the age of 65, being buried on Monday last. Mr. Wood had been quite active in the business during the past few years, and was well and favorably known to many readers of Hardware and Metal.

Other Provinces.

T. J. Farley and R. C. Ward, Wetaskiwin, are to open a hardware store at Lloydminster, Alberta.

W. S. Fisher, of Emerson & Fisher, St. John, N.B., has been on a business trip to Charlottetown, P.E.I.

J. S. Orr and W. Whyte, Wetaskiwin, have purchased a stock and are erecting a building at Daysland, Alberta, where they will establish a hardware business.

Arrangements have been made for the sale of the hardware business of MacPhail & Co., 651 Granville street, Vancouver, to Logan E. P. McAdam, late of Dunedin, New Zealand.

Quebec.

J. A. Boudrias, of Chateauguay, was in Montreal last week, calling on the jobbers.

Isaie Hardy, general storekeeper, of St. Bazile, paid a business visit to Montreal last week.

J. Allan Munro, of the Canada Paint Co., Montreal, has returned from his trip to the Old Country.

Geo. Boyd, of the Montreal Rolling Mills, has returned from a pleasant vacation spent at L'Achigan.

T. G. McClatchie, tinsmith, of Hemmingford, called on the Montreal jobbers and supply houses this week.

Chas. Milot, general storekeeper, of St. Monique de Nicolet, visited Montreal on a business trip this week.

A. Arel, of Beauharnois, was in Montreal last Monday in connection with his extensive contracting interests.

L. J. Moger, tinsmith and roofer, of St. Antoine, was among the outside buyers in Montreal during the week.

E. Ryan, lately with the H. S. Howland Sons & Co., has joined the sales department of Lewis Bros., Limited, Montreal.

Geo. J. Crowdy, Montreal manager for James Hutton & Co., is away in the Old Country. He is expected home early in October.

The Canada Paint Co. have completed arrangements to increase their facilities by the erection of a new warehouse on William street, Montreal.

K. B. Thornton, of the J. G. White Co., New York, and formerly of the Montreal Light, Heat and Power Co., spent a few days in Montreal this week.

W. C. Webster, Jr., of the firm W. C. Webster & Son, wholesale and retail hardware merchants of Coaticook, was in Montreal on business during the week.

G. P. Breckon, assistant manager of the Metallic Roofing Co., Toronto, accompanied by his wife, spent a few days in Montreal this week, stopping at the Windsor.

The Canadian Fairbanks Company have made arrangements for the publication of a monthly magazine to keep their customers and others in touch with the progress of their business.

C. S. Lowe, of the office staff of the Whitman-Barnes Manufacturing Co., St. Catharines, Ont., was in Montreal with the Athletic lacrosse team and played a splendid game for the Minto Cup challengers.

Mr. Ross, of Ross Bros., hardware merchants, Edmonton, was in Montreal this week, after visiting Toronto and New York. Like all westerners, Mr. Ross is very enthusiastic over the prospects of that part of Canada.

A. B. Allan, of Allan Whyte & Co., Glasgow, Scotland, was in Montreal this week. He is here to extend his Canadian business and spoke very hopefully of the future of the firm's interests in this country. Allan Whyte & Co. are contractors to His Majesty's Government, and own the Clyde Patent Wire Rope Works of Rutherglen, Glasgow. They are also manufacturers of wire rope for collieries, mines, aerial tramways, etc. Their representatives in Canada are: Wm. Stairs, Son & Morrow, Halifax, N.S.; W. H. Thorne & Co., Limited, St. John, N.B.; Drummond, McCall & Co., Montreal; and John Burns,

The Story of Our New Publication

The BUSINESS MAGAZINE

We have decided to start almost immediately the publication of a new monthly magazine for busy men and women, in which we will reproduce the very best articles contained in the magazines of the world—not dry statistical articles, but bright, clever, readable matter of special interest to business men.

Readers of Hardware and Metal know that every month a great many articles and sketches appear in the magazines, which they would like to read. They are prevented from doing so by the great number of the magazines and by the expense of securing them. Just think what an opportunity the Business Magazine affords them of getting the very best of these publications at a ridiculously small cost!

All the magazines of the world will be received month by month at our office. They will be distributed among the members of our editorial staff, who will make selections from them. These will be submitted to the managing editor of the magazine, who will cull out the unsuitable matter. Finally, before being sent to the printers, a council of the managing editors of the MacLean Trade Newspapers will be called to pronounce a final verdict on them.

The result will be a magazine without a dull page—a magazine that you can read with pleasure any time—a magazine that is the gateway to the best current literature in the world.

In addition to the articles which will be reproduced, those other articles which we are unable to print will be listed, so that every month readers will obtain a key to every article on a commercial subject that has appeared.

The Business Magazine will contain 150 to 160 pages and will be published about the first of every month. Its subscription price will be $2.00 per annum.

The MACLEAN PUBLISHING CO., Limited

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 22, 1905.

FINE orders, both for immediate and future delivery, have been taken this week, some wholesale houses reporting that they are now busier than at any other time during the year. They have never before had so many orders in a single week.

Prices in all staple lines are stiff, with an upward tendency, while a slight advance has been made in the price of brass and copper wire. Instead of a discount of 60 per cent. off the list, as has been reported in our current market quotations for some time, the ruling discount is now 55 per cent. net cash 30 days, f.o.b. factory. Hay wire is selling very strongly at present.

Country dealers are sending in good orders for horse blankets, sleigh bells, curry combs, skates and other winter goods. Indications point to a record-breaking business for the approaching season. Washing machines are also well to the fore in all orders which are being forwarded.

Ammunition continues to be the strong feature of the market, and rifles are going out fast. Sportsmen are eagerly preparing for a great season in shooting big game this year.

Axes—A brisk movement is going on all the time, now. Our prices are still: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—The demand keeps up well. Our quotations are as follows: Axe handles No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Business is improving with every week. We quote: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—The demand has decidedly improved, although the market still feels the effect of the recent cut price war. Even yet, lanterns are being sent out to fill orders booked months ago. In spite of the withdrawal of prices by prominent manufacturing firms, we still quote: Cold blast, $4.50; No. 0 Safety, $5.50.

Rivets and Burrs—The regular demand is experienced. All the staple hardware lines are selling very fast just now. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—We quote: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—Prices are very firm, and nails are in better demand than for some time. We quote: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—Are rather dead, and very few large orders are being received. Prices are $2.20 per keg, f.o.b. Montreal

Horseshoes—Fall business is coming on, as is shown by the increasingly large orders flowing in. Our prices are: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

THE WEEK'S MARKETS IN BRIEF.

Linseed oil has advanced 1c. in Montreal.

Brass goods have not yet made their expected advance.

Tin has declined half a cent on the Montreal markets.

Canadian crude oil has advanced 5c.

Scrap rubber is quoted half a cent higher.

Brass and copper wire are now quoted at 55 per cent. discount instead of 60 per cent.

Sporting Goods—Ammunition continues to lead the market in sporting goods, though skates are coming rapidly to the fore. We quote as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Conditions remain unchanged. The season is somewhat backward. There has been no change in prices.

Cordage — A fairly active market is maintained. Prices as quoted in our current quotations in the back.

Cement and Firebrick—Good jobbing orders are being received, but no large inquiries are reported. Prices are: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—A splendid flow of orders indicate a big demand in all parts of the country. Our prices are: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—Though orders are being shipped regularly, the business is not so large as in previous seasons, the inference being that consumers are all supplied. Our prices are: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Retailers are becoming alive to the fact that there is a good season ahead for skates, and many inquiries are being received from all parts. Prices vary from 25c. to $2.50, according to quality.

Sleigh Bells—These are also good sellers at the present time. We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We give the same figures as previously. Jute, unlined $4.50: 3-4 lined, $9.50; full lined, $12: 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24: Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—Sales are not yet very brisk but many inquiries are being received. Prices range from $15 to $35 per dozen pairs, according to quality.

Promptness is one of the best of qualities in both merchant and clerk. It is a good idea, when practicable, to be a little ahead of time with our duties. None, of us know what the morrow is going to bring forth, and if anything happens which takes us away from business for a day or two, things will run much smoother if work is well in hand.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 22, 1905.

WHILE there is nothing exceptional about the volume of business being done, the jobbing houses are well satisfied and are not making any complaints. They look for a very busy time from now on, but have no desire to encourage overbuying by booming business. The crops have been very satisfactory and buying has been as large as conditions would warrant so far, the growth being of a healthy nature rather than of the type of a boom.

Sporting goods continue to be one of the best selling lines and the approach of the shooting season will find the local stores well stocked with guns, rifles and ammunition. There has been a scarcity in some classes of imported shells, however.

Builders' hardware, cement and roofing papers are in strong demand, the volume of business in this branch having been very great this year.

Washing machines, apple parers, step ladders, etc., are all being bought in large quantities, and lanterns are also in active demand.

Axes, skates, sleigh bells, horse blankets, etc., are being called for and trade in these lines will increase during the coming month.

With the exception of copper and brass wire all prices remain the same. The discount on these lines has been cut from 60 to 55 per cent.

Sporting Goods—Rifles and shotguns are selling well and ammunition is moving actively despite the difficulty in securing imported shells there is no scarcity.

Washing Machines—This line is moving more freely.

Chain—Fall trade is beginning to pick up. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders— Step ladders are in strong demand and a large business is looked for next month. We quote as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—A fair business is being done, but not so large as a month ago.

Wire Nails—Trade is very large, but stocks are ample for all demands. Prices are the same.

Cut Nails—There is a very satisfactory trade being done. Quotations are: $2.40 per keg f.o.b. Toronto.

Horseshoes—Good business is being done and a large Fall trade is looked for. Our quotations are: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Axes—Trade is good, but next month will see more activity.

Cutlery—Trade is increasing and case goods particularly are in demand.

Skates and Sleigh Bells—Large orders are booked for future shipment, an increased trade being indicated by the orders in hand.

Lanterns—Many good sized orders are being received for early shipment.

Apple Parers—Trade in this line continues active.

Horse Nails—Trade is active at unchanged prices.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—All the mills are rushed and stocks are being called on heavily.

Cordage—Sorting orders are coming in. Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Our quotations continue as follows: Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is no change in the market and business continues satisfactory. We quote: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse, Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—The demand is fair, but not so large as during the warm weather. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 20c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A good business has been done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—The market has settled somewhat to a steadier basis. The unhealthy competition between rival wholesale buyers has met with a check since our last report, having the effect of checking the unwarranted advances so noticeable of late. Prices have, in consequence, for the moment halted, and we are quoting previous prices, firm and steady. It is not at all unlikely that a downward tendency will be manifest at an early date. We quote:

Hides, inspected, No. 1 per lb.	....	0 12
" " " 2 "	....	0 11
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected	....	0 14
" " No. 2	....	0 12
Lamb skins and pelts, best city slaughter	....	0 85
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, per lb.	0 16½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 22, 1905.

COPPER is as firm as ever, this week, and there is still a great scarcity of ingot casting copper. Some stories are going the rounds regarding the alleged shipment of copper to China, to await a more pressing need for it in this country and in the United States. This may or may not be true—probably not—but it is certain that something is being done to lessen the available supply. There is practically none offering for immediate acceptance.

Lead has been steady throughout the past week, and there has been no disposition to change the prices.

Tin is hardly as strong as it was at our last reports. People seem to be nervous on account of the decline, but the fact remains that there is not much tin here, and pretty good prices are obtainable. It will probably recover in a short time, and, at any rate, no weakening is expected.

Pig iron has been rather quiet this week, but some orders of fair size have been placed. Many foundries are said to be short of stock, and a better demand is looked for in the near future.

Galvanized sheets are a feature of the market, and are gaining strength quickly. Spelter has jumped up, and as it is an important item in the manufacture of galvanized iron, the result has been felt in the higher prices paid by jobbers this week. In the United States, Apollo sheets have advanced twice during the week, and they are bound to go up on the local market in a very short time.

Canada Plates—No new features have developed during the week, and the following prices are firm: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—A shortage is still reported, though it is suspected that this is a result of artificial conditions. Current prices show good strength, and it is likely that they will hold for some time. We quote: Ingot copper, 17 1-2c.; sheet copper, 24¾c.

Ingot Tin—This metal is somewhat weaker than at our last reports. There is a feeling, however, that it will recover shortly from its temporary stagnancy. We give prices: 35 1-2c. to 36c. per lb.

Pig Lead—Continues quite firm at the following prices: $3.70 to $3.80 per 100 lbs.

Boiler Tubes—Good business is reported at unchanged prices. We quote as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—A quiet, but satisfactory volume of business is being done. We are still quoting:

LAFARGE (non-staining) CEMENT

for setting, pointing and backing Limestone, Granite or Marble where freedom from discoloration is desired. Send for descriptive catalogue.

Drain Pipes, Sewer Bricks,
Fire Bricks, Building Bricks,
Portland Cement,
Road Paving Bricks and Blocks.

Tool Steel—We give prices: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—Our prices have not changed. A fairly brisk business is reported by dealers at the following prices: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—We give prices as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The firmness of galvanized sheets is one of the strongest features of the market. We are quoting: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—No change has been noted and our figures are still as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—There is still a great scarcity of this article, although conditions are improving a little. We give still our last week's price of 16c. per pound.

Tin Plates—The weakness of tin ingots is not felt by tin plates as they did not advance as strongly as ingot tin during the recent tin boom. We are quoting: Cakes, $3.75; charcoal, $4.00.

Ingot Zinc— This market is decidedly stronger and although we do not give any change in price this week it is considered very probable that such a thing will take place shortly. We still quote: 6 1-2c. to 6 3-4c.

Scrap Metal—Copper scrap is the same as at our last report and is quite as firm. There is rather better demand for cast iron scrap, but wrought is very inactive. The local mills are not asking for any at present, and it is not expected that conditions will improve much for some time yet. Old rubbers are now bring-

ing a better price, being quoted at from 6c. to 6 1-4c. per pound. Our prices are as follows: Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed scrap, 75c. to 90c. per 100 lbs.; old rubbers, 6c. to 6 1-4c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street east,
Toronto, September 22, 1905.

OUTLOOK for Fall business is very promising as the large consumption continues unabated. Trade is very good in black and galvanized sheets and the call for lead is very active. In ingots there is not so much doing. While there are no particular shortages, stocks on the whole are anything but heavy. In both bar and pig iron the mills are working at their fullest capacity to supply the steady demand.

Pig Iron—Stocks are very light and some mills are booked ahead for months being out of the market completely. Quotations continue as follows:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	....	18 50
" No. 2, "	....	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	21 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Mills are all running at full capacity and demand is very heavy. We quote as follows : $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—There is a fair demand with prices firmer.

Tin Plates—Demand is active with prices unchanged.

Galvanized Sheets— The demand is very strong. Prices are advancing very sharply in outside markets.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—General activity rules. Stocks are light, and many dealers short. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—There is an active demand. Prices are steady: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—The market is quiet. Prices continue very firm. Our quotations are as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Conditions are unchanged and the market is quiet.

Old Material—Copper and brass are very firm and stocks are very light. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9 1-2c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5 1-2c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Anthracite is meeting with an increased demand. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, September 21, 1905.

ONE of the characteristic buying rushes seems to be on in the pig iron market, reports from all the leading distributing centres showing a heavy movement.

In Pittsburg the purchase on the part of the Steel Corporation of a lot of 10,000 tons of Bessemer pig for prompt delivery has been followed by some large sales, aggregating 65,000 to 75,000 tons of Bessemer and basic pig, the bulk being taken by a large western Pennsylvania steel plant. Eastern Pennsylvania steel mills have again entered the market and have taken considerable quantities of basic pig, the price advancing squarely to $16, delivered.

Chicago reports large transactions in foundry iron, aggregating 25,000 tons, which includes one lot of 10,000 tons of charcoal iron to large car wheel makers. Cincinnati notes some round sales. In Buffalo one furnace interest placed 13,000 tons, while Pittsburg notes the purchase by one company of 10,000 tons of foundry iron. It is estimated that the sales of foundry iron in the New York district, although individually none of them runs above 2,000 tons, will foot up to 30,000 tons during the week. The greater part of this iron is for delivery during the last quarter of this year, and the first quarter of 1906.

Prices have stiffened in all directions as the result of this movement.

It is understood that the Steel Corporation will need 40,000 tons of outside iron for October. As yet no purchases have been made, and it is not yet sure whether the iron will be taken in one block or will be bought piecemeal.

While the largest orders for steel rails which were in the market last week, including the 160,000-ton order for the New York Central, have not yet been placed, some goodly contracts have been booked by the mills. They total up to over 100,000 tons, there being included in them 19,000 tons for the Tidewater Railway, 17,000 for the Reading, 10,000 tons each for the Norfolk & Western, the West Shore and the Oregon & Western, and 7,500 tons for the Appalachiola & Northern. New England roads have come into the market recently and inquiries are at hand from a number of southern systems.

Railroad buying is greatly in evidence, too, in bridge material. The leading interest reports that there are

in hand inquiries for 100,000 tons of fabricated material, the greater part of which is for railroad bridges, some of which are large undertakings.

The scarcity of steel is becoming more pronounced.

Additional work seems to have come to the lake shipyards, report having it that the Steel Corporation has ordered three additional large boats.

Pittsburg reports that further important business for the steel car builders is pending. One system is expected to give out orders for 32,000 cars in 1906.

In the lighter lines satisfactory reports come from the wire trade. The merchant steel trade is in excellent shape, and the bar mills generally are very busy. In the sheet trade complaint continues to be made in regard to prices, which fail to reflect the rise in steel, so that the situation bears heavily upon those mills which do not control their own raw material.

In spite of the large tonnage placed recently in merchant tubes, which includes one very large order, prices remain irregular and unsatisfactory.

The cast iron pipe trade has been on the qui vive about the contract for the New York high pressure service. It has not yet been let.

If prospective builders only realized the advantages of "Metallic" building materials, they would use nothing else.

Wood is not only becoming more expensive all the time, but is the most inflammable material that can be used; slate is objectionable because it quickly loosens up and permits a maximum of leakage.

But "Empire" Metallic Shingles form a striking example of the perfected roofing which is proof against rust, fire, rain and lightning and contains the elements of durability in the highest degree.

Can you imagine any more acceptable proposition to submit to your customers? Will it not pay you to educate them regarding "Metallic" goods? You'll not have to answer complaints if you do.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts.
"Metallic" Siding (stone, brick, etc.)
"Impervia" Fireproof Windows
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Material of every description.

403

LONDON METAL MARKETS.

From Metal Market Report, September 20, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 48s. 3d., and Glasgow standard foundry at 46s. 9d., making prices as compared with last week 3d. lower for Middleboro and 6d. lower for Glasgow foundry.

Tin—Spot tin opened firm at £146, futures at £145, and after sales of 160 tons of spot and 280 tons of futures, closed firm at £146 for spot and £145 5s. for futures, making price as compared with last week 2s. 6d. lower on spot, and 5s. lower on futures.

Copper—Spot copper opened firm at £69 2s. 6d., futures £69 2s. 6d., and after sales of 300 tons of spot and 800 tons of futures closed firm at £69 5s. for spot and £69 5s. for futures, making price as compared with last week 5s. higher on spot and 7s. 6d. higher on futures.

Lead—The market closed at £13 15s., making price as compared with last week 2s. 6d. lower.

Spelter—The market closed at £26 10s. making price as compared with last week 10s. higher.

Nova Scotia Trade News

Halifax, N.S., Sept. 20, 1905.

NO change worthy of note has occurred in the hardware trade since last report. Business generally is very quiet. It was expected that with the Exhibition on in this city buyers from outside points would take advantage of the unusually low rates on the railways, and come in to make purchases, but so far these expectations have been disappointing. Very few of the regular customers have placed their orders.

* * *

Arms and Ammunition—Some good sales have been reported. The sailing vessels which are fitting out at this port for the Pacific, have made quite heavy purchases of cartridge shells, guns and ammunition.

* * *

The fishing boat races promoted by the Provincial Government, which took place off this harbor during the latter part of last week, were very successful. The object of the races was to improve the class of boat engaged in the industry. The large wholesale hardware firm of Stairs, Son & Morrow, which is interested in the development of the fishing industry, presented a very fine spirit compass to the Togo, one of the winning boats, and at the presentation of prizes on Saturday Rear Commodore Bell announced that Messrs. Stairs, Son & Morrow had generously offered to supplement next year's prize list by one hundred dollars.

* * *

W. B. Arthur, who formerly was in the hardware business in this city, has returned from a trip to Montreal, where he closed arrangements with Caverhill, Learmont & Co., wholesale hardware merchants, as their representative in the Maritime Provinces, with headquarters in Halifax.

* * *

Matheson & Co., Limited, of New Glasgow, N.S., have under construction at their works a complete gold mining outfit for Mings, Newfoundland. The plant will consist of crusher, engines, boilers, tools and concentrating table. The plant is for the Goldenville Mining Co., in which St. John, N.B., people are largely interested. A shaft has been sunk to a depth of 150 feet, and the tests which have been made are very gratifying. This is the first mine in Newfoundland where gold has been found in paying quantities, and the Matheson mill will be the first one ever erected there.

* * *

General Manager Mitchell of the Maritime Coal and Railway Company, says that the company has in contemplation the erection of a big steam plant at the mines for the purpose of supplying Amherst with power. The power will be generated at Chignecto and conveyed by wires a distance of six miles. It is expected that at least 2,000 horse-power will be available for distribution. The proposition if carried into effect will be of valuable aid to a number of the manufacturing industries of the town. The output of the coal mines of the company is now about two hundred tons daily, and the number of men employed there is 150.

* * *

Prices quoted here follow:

LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 22, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

ACTIVITY marks all branches of the wholesale hardware trade and some houses are working overtime to fill orders. There are not many price changes of importance. Glass is selling at lower prices, a reduction of 2c. per gallon has been announced in linseed oil and petroleum has been advanced 1-2c. per gallon. Wholesale houses are bringing in large stocks before the close of navigation and numbers of orders are being booked for delivery after the lake routes are closed. The trade have been carrying light stocks during the last year or more and now that a year of prosperity seems assured because of the bumper crop there is a tendency to buy freely. The result is seen in the heavy buying of the last three weeks.

Lanterns—Wholesale prices are steady, but the retail trade is still in trouble with destructive department store competition. We quote:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Prices are quoted as follows:

Barbed wire, 100 lb	$2 85
Plain galvanized 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	2 85
Staples	3 35
Oiled annealed wire 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Business is very active. The price is steady since the recent reduction to $2.75 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots 3c.	discount.
" " small lots 2½c.	"
Hex " case lots 3c.	"
" " smaller lots 2½c.	"

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is very active at following unchanged prices:

Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—The shooting season opened on the 15th inst. and already there are numerous assorting orders for supplies, owing to the very heavy demand. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—For small quantities the price is 20 cents per lb. Concessions are obtainable for large quantities.

Iron and Steel—The market is active

and prices are steady. We quote:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

16 to 95 "	17.30
6 to 100 "	

British Columbia Trade News

Vancouver, B.C., Sept. 15, '05.

NOT only is the Dominion Exhibition bringing increased activity and prosperity to New Westminster this year, but there are a number of very important industrial enterprises being established, or extended, which will add materially to the permanent prosperity of the city by the banks of the Fraser River. One of these, a tannery, is almost the first institution of the kind in the district. Certainly it is the first large tannery in the Province. A smaller one has been operated in former years at New Westminster, but the new institution is to be of considerable proportions and of capacity equal to the larger plants in the east. The Fraser River Tannery Co., which is erecting the plant, is expending $60,000 in all. The buildings are well on the way, and part of the plant is installed. Other machinery is to arrive, and by the end of October or first of November, it is expected that there will be active work going on.

The new saw mill of the Small & Bucklin Lumber Co. is nearing completion on Dockyard square. A very large plant has been erected, all necessary buildings for a complete lumber business, wharves for steamers, and also covered sheds for shipping by rail. The machinery put in is all of the most modern and complete style, and the mill will have a very large output. It will be running in the course of three or four weeks.

The Brackman-Ker Milling Co. are erecting large wharves and warehouses on the river front, and it is expected that before the Dominion Fair comes on vessels will be loading and discharging there. This will sonsiderably increase the shipping facilities of the river port, and with the improvements of the channel of the Fraser river being carried out with the big dredge King Edward, and in contemplation later, the long-deferred hope of royal citizens may be realized of making New Westminster once more a port for sea-going vessels.

* * *

Preparations are well ahead at the Exhibition Grounds for the Dominion Fair, which begins on Sept. 27. New buildings have been erected and accommodation provided for anticipated large exhibits. The entries have been pouring in at a very rapid rate, and in every line a very representative exhibit is expected. From the east, many manufacturers have signified their intention to be represented with their goods, and space has been asked for. Not much room will be left after all allotments are made, though with the careful preparations ample accommodation has been provided for all exhibitors. One of the principal features will be exhibits of products from various districts of the Province, each district sending a district exhibit covering the range of production and industry. Mining and fishing, as well as the lumber manufacturing, are also to be prominently displayed, so that visitors from other parts of Canada or elsewhere will be assured of seeing not only what the country is doing, but what can be done here. Weather conditions being favorable, and indications point to that, there is now no question of the success of New Westminster's Dominion Fair.

* * *

Vancouver is interested in the proposal of the Australian Commonwealth to charge duty on cost of goods made in Canada, plus freight to point of shipment by reason of the fact that a big portion of Canadian goods sold in Australia come to Vancouver for shipment over the Canadian-Australian line of steamers from this port to Sydney. Another way in which she is interested is found in the fact that all the Canadian manufacturers are practically centred in Ontario. The long freight haul, if duty is collected on cost with freight added, would prohibit shipment of many lines now made in the east. If these were made in Vancouver, the freight haul would be avoided, and to a certain extent the difficulty obviated.

* * *

The development of coal properties on the Yukon promises to replace wood as a fuel on all the river boats, and to a large extent in Dawson. There is a coal mine at Tantalus, on the Upper Yukon, and several of the White Pass steamers are now using it with good results. Down the river, at Coal Creek and Nulato, there are mines being worked, and the coal is sold to Dawson trade. Below Eagle, on the Yukon, another mine is also being opened. In the past there were many wood camps scattered along the river to supply the steamers, and also to ship wood to Dawson. These may in time be altogether superseded by the development of the coal measures of the north. The N. C. Co.'s steamers on the river have been equipped with oil burners for some time, the company bringing the crude oil from San Francisco.

* * *

Vancouver Board of Lrade and City Council are interesting themselves very greatly at the present time in the project of inducing industries to locate here. The provision of a large supply of electric power, at reasonable rates, has had the effect of making it possible for small industries to locate without investing large capital in steam producing plant. It is further possible, by use of electric power, to establish plants in locations where the use of steam power would be an objection. A special committee is handling the proposition.

* * *

The renewal of the street lighting contract in the city of Vancouver has raised in the mind of Mayor Buscombe the possibility of having a municipal lighting plant, and with it saving money for the city. He has been going into the matter very thoroughly, and is impressed with the wisdom of the plan if present prices are maintained. He also considers that the city could very well undertake to supply the citizens with the incandescent light at reduced rates. The former lighting contract, now about to expire, cost the city at the rate of about $90 per light, for all night service. The new bids, two of which were received, one from the B. C. Electric Light Co., and one from the Stave Lake Power Co., bring the price down to about $40 per arc light per year, both being based on electricity generated by water power. If the city goes into business it would purchase electric energy from one or other of the companies. The B. C. Electric Co. is the one now in business, and the Vancouver Power Co., which recently completed its waterpower plant, is subsidiary to it. The Stave Lake Power Co. has construction now going on on its plant.

* * *

Over a thousand men are at work on the Spence's Bridge-Nicola branch of the C.P.R., and the sub-contractors expect to get their work done before the snow flies. The building of this branch opens up half way into the Similkameen district from the north. On the V.V. & E. in the southern end of the Similkameen district work is being pushed, the line running from Grand Forks to Princeton, and when that part is finished it is intended to run right along to the coast, which will be reached in about three years. From Midway to Keremeos is now under contract, and work is being pushed on the grading. Over 1,500 men are now employed in this work, and the number is being added to constantly. The contractors claim it is one of the heaviest railway contracts ever let in the Northwest, only the lines of the C.P.R. through the Rockies and the Great Northern through the Cascades alone excepted.

* * *

A Seattle company, the Asphalt Paving Co., has the contract of re-surfacing the asphalt-paved streets of Vancouver, being several thousand dollars below other bidders.

* * *

Railway Commissions, Transportation Commissions, Tariff Commissions, Fisheries Commissions, all are to meet in British Columbia in the near future, and there is perhaps still further commission business to be sprung on the devoted Province before an end is made of Royal Commissions. In the work of all of them, however, British Columbia has an interest, and in some of them she is deeply interested.

WESTERN FAIR AT LONDON

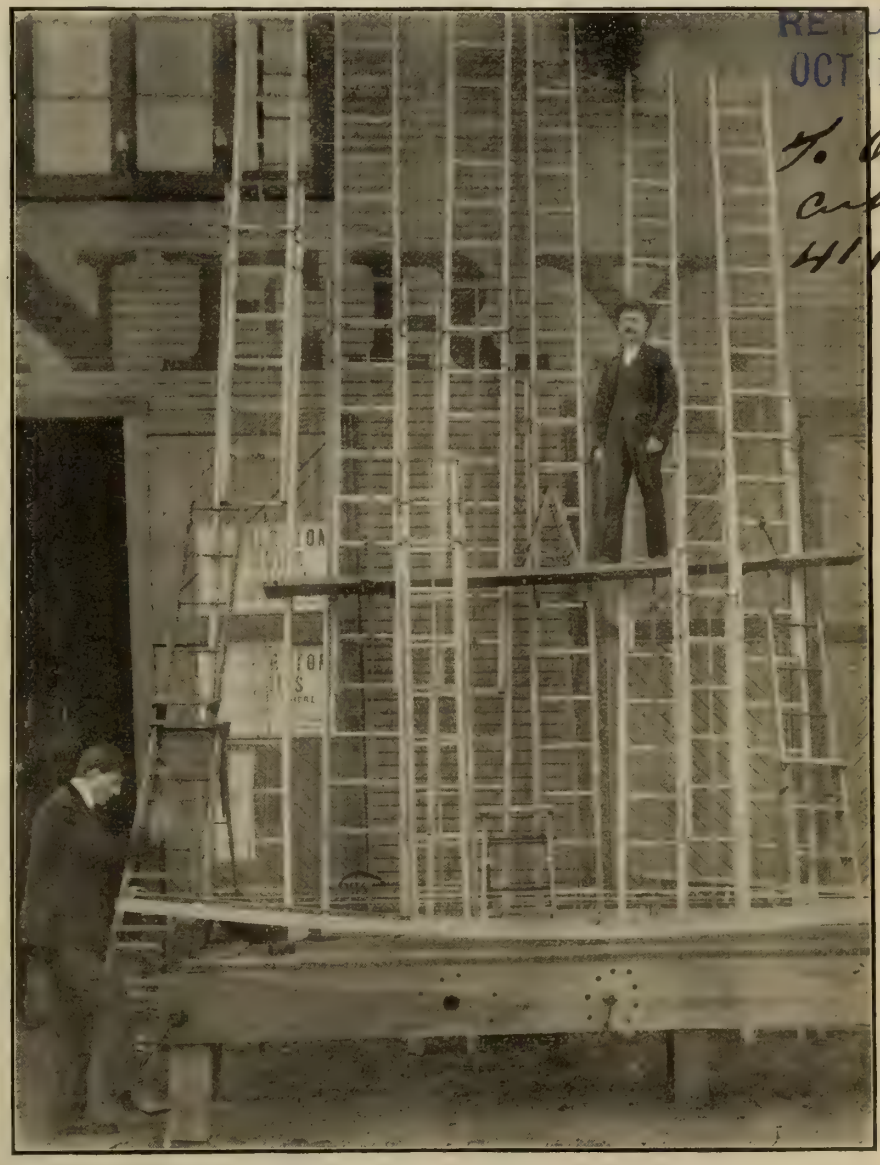
AMONG the thirty-eight Fairs that have been held in London since the institution of the Western Fair it may safely be said that none has been attended with a greater degree of success than the one that came to an end on September 16.

Much of that success must, of course, be attributed to the beautiful weather that prevailed without a break until the Friday evening when Jupiter Pluvius gave vent to his pent-up energy and made those once thronged Fair grounds a drooping and a dripping wilderness devoid of human life save for the occasional figure of a stout lady making record time for the pavilion.

Who cared, however? The Fair was practically over, for Saturday was the day for exhibitors to pack up and look pleasant. Wednesday and Thursday were the big days on which the success of the Fair depended and on those mornings anxious-visaged directors could be observed scanning the heavens with as much interest as Galileo ever displayed, though of a different kind. Joy succeeded anxiety, however, and the number that attended the Fair on those days was greatly in excess of the corresponding figures of any previous year.

In the Main Building there seemed to be a slight falling off in the number of exhibits but from the aesthetic point of view they perhaps reached a higher standard than last year.

The piano industry had as usual the largest number of representatives. The furniture industry was also well represented. Two soap and two chocolate firms had displays. It seems a pity that London manufacturers do not display a greater interest in the Western Fair. Surely it is good advertising for the Western Ontario field and it would certainly help London. Yet several prominent industries were totally unrepresented.



The Stove Building was the scene of some excellent exhibits, six stove companies being represented there. The Machinery Building had its usual complement of farm implements and machinery very similar to last year, and the same can be said of the Carriage Building. The Agricultural and Horticultural Buildings contained an admirable display of farm produce, fruit and flowers. This was really one of the best feaeures of the Fair. As to the exhibition of paintings,

"I would that tongue could utter
The thoughts that arose in one,"

but we must leave that section to the art critics. A good deal of the life and fun of the Midway was lacking this year. The determination of the directors to admit no shows of questionable character or in the nature of fakes necessarily caused a good deal of cutting out. The vaudeville show included some new and thrilling acts and the fireworks were excellent and went off without a hitch.

The Waggoner Ladder Co., Limited.

A knot of interested visitors was always to be seen at the exhibit of the Waggoner Ladder Co., shown now the fifth year at the north end of the Machinery Hall. The chief feature of the exhibit was the Waggoner Extension Ladder. A selection of these of different lengths and types was placed against the building where they showed to excellent advantage, but the greatest interest was shown in a workman of the firm who, with his bench and appliances, worked away as if in the factory putting in the steel wire reinforcement which constitutes one of the important points of merit in the ladder. The cut herewith shows the operation. The ladder is bent with a windlass, the high carbon steel wire strung tight with another windlass and fastened securely at both ends, then stapled firmly into a groove at the back of each side rail. This wire has a strength of 2,000 lbs. to each wire and enables the ladder to be made with about half the weight of timber otherwise required. With the celebrated Waggoner Steel Safety Lock this makes probably the very best ladder produced anywhere. Crowds stood around the bench all the time watching the work and the company report their sales the largest they ever made at the Fair, every implement agent and hardwareman who saw the exhibit asking to be allowed to handle the goods.

Western Exhibition—Display of Waggoner Ladder Co., London, Ont.

Another very useful and attractive article exhibited by this company was the Davis Clothes Reel for the yard. This is very simple and useful. It carries 130 feet of clothes line cable and occupies a space 16 feet in diameter. It saves the need for shovelling a long line of snow from clothes lines in winter and is very

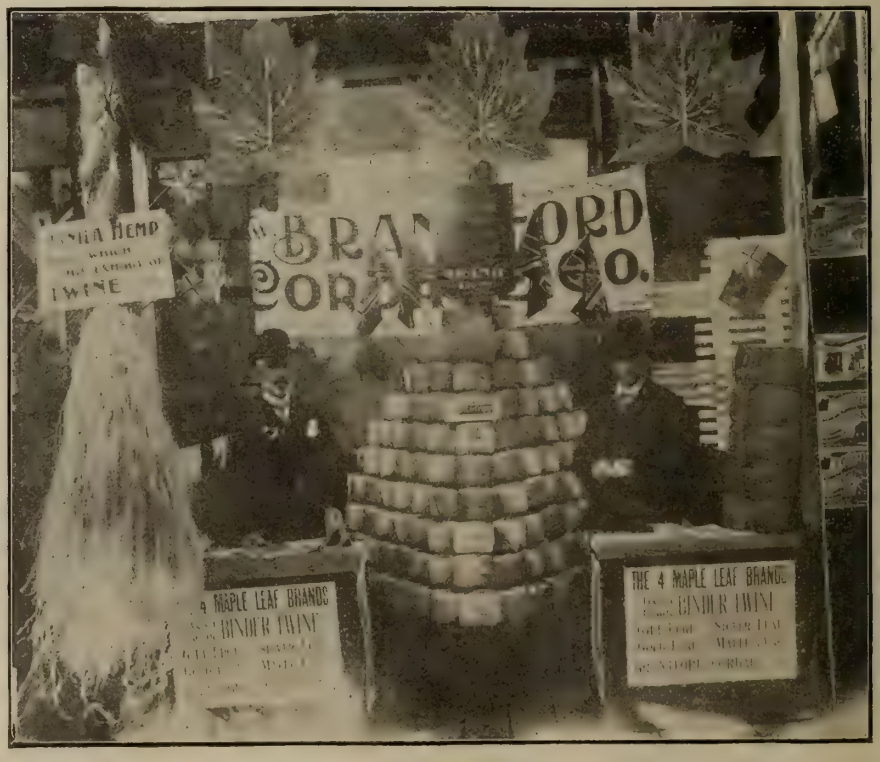
handy the year round. The company give liberal terms to dealers. E. H. Briggs & Co., Winnipeg, represent the company for the Northwest.

Western Exhibition—Showing made by Dennis Wire and Iron Works.

Dennis Wire & Iron Works Co. Limited.

An exhibit that found a host of admirers was that of the Dennis Wire & Iron Works Co., Limited. The front was railed off with lawn fencing, a handsome aluminum bronze gate providing an entrance. Inside on the walls and floor a complete range of the company's wire and iron goods was shown. A wrought iron piano lamp with scarlet shade threw a soft light over some handsome pictures on wrought iron stands that gave the finishing touch to the display.

We would strongly impress on the hardware trade the opportunities they have for obtaining large orders for this class of goods and thereby earning substantial commissions for themselves. The hardware merchant always knows when iron or wire work is required for a bank, church or public institution in his own town. It is not necessary that he should stock the goods. All that is required is that he should use his influence to get the order placed and once this is done his profits are earned just as if he had sold the goods over the counter.



The Dennis Wire & Iron Works Co. make all kinds of brass church work, bank and office fittings, fire escapes, elevator enclosures, iron and wire fencing, iron stable fittings, flower stands and hanging baskets and stands, wrought iron fenders and fire irons, iron screens, etc. The company have a handsome catalogue which they will be pleased to mail on receipt of a postal.

Brantford Cordage Co.

The sole representatives of the binder twine industry were the Brantford Cordage Co. They were located in the Machinery Hall and were a centre of attraction to the farmers. The company had spent great pains and displayed excellent taste in the construction of their exhibit and they had their reward, for not a farmer passed without stopping to examine the pyramid of "Gilt Edge," and exchange some remarks with Mr. White and Mr. Neilson, the company's popular representatives, who were in charge of the exhibit. The "Gilt Edge" brand (650 feet) has now become a household name among farmers on account of its superior and uniform quality. But that applies to all the four brands of "Maple Leaf" binder twine. In the manufacture of these brands every detail is carefully guarded. The fibre used is the longest, strongest and cleanest obtainable. There is complete system and supervision throughout the factory and every detail in the processes of preparing, blending, spinning and balling is carefully watched by trustworthy experts. The bale of finished twine is solid value. It represents 50 lbs. of binder twine. There is no paper or waste material to help make up the weight. Then the bale is corded with 20 feet of good rope made in the factory at Brantford.

It is a remarkable fact that notwithstanding the very adverse conditions in the binder twine industry, the Brantford Cordage Co. have been selling more binder twine each successive season. There is only one explanation and that is superior quality.

It should not be forgotten that in addition to binder twine the Brantford Cordage Co. make all kinds of cordage. The company's representatives will shortly be on the road and will have a proposition of exceptional interest to make to the trade, both in rope and twine. The latter would therefore do well to await their arrival before placing orders.

Western Exhibition Brantford Cordage Co.'s Exhibit.

Moffatt Stove Co.

The Moffatt Stove Co. had a really fine display in the Stove Building. It had a frontage of over 50 feet and excellent judgment was displayed in grouping the various lines of stoves and heaters. Crowds of people stopped to examine the handsome Canada National ranges and other lines, and the company's representatives were kept busy from morning till night. The Classic National range as shown in the model kitchen was also a centre of attraction. It is an exceptionally handsome stove and appeals specially to those who desire a stove

which combines all the latest conveniences together with beauty of design. There were also exhibited Base Burners, Oak Heaters and National Hot Blasts. The last is fitted with patent duplex grates and double heater. Mr. Westman is fortunate in having the sole agency for London for these handsome stoves and ranges.

Hobbs Manufacturing Co.

The exhibit of the Hobbs Manufacturing Co. was admitted on all hands to be one of the most beautiful in the whole Fair. It was located at the north-east corner of the Main Building and was truly a work of art. The north side of the stand was devoted to stained glass windows, the artistic merits of which were undeniably great. On the other side were displayed a wide range of beautiful decorative glass. The famous Maximum light window glass was a prominent feature of the exhibit. The company claim that this is the only daylight-increasing window glass combining lenses and prisms, and is not to be confused with prismatic or any other glass. The Hobbs Manufacturing Co. of London are the sole agents in Canada for the Maximum Light Window Glass.

This company make a specialty of art glass, electro glazed, and also set in heavy metal bar. The latter provides great strength and durability as compared with glass set in ordinary lead. The company some time ago installed a very expensive special plant which enables them to turn out the glass with perfect finish and great rapidity.

Another line they are making a specialty of is the mitred or cut plate glass. They are the only firm west of Toronto making this kind of glass. They also carry a heavy stock of window glass and all kinds of fancy and figured glass for building purposes.

The Western Milling Co. will erect a 20,000-bushel elevator at McLeod, Alta.

The announcement is made that on January 1st next a change will be made in the old established hardware firm of R. P. Butchart & Bros., Owen Sound. A slaughter sale is now in progress.

RETAILERS TO ORGANIZE.

A Montreal despatch says there is a movement on foot among the retail merchants to form an association embracing retail merchants of every description throughout the Dominion, with a central governing body. They will establish agencies in each district and the executive officers of each local board in a Province will constitute the Provincial council, the officers of which will in turn form the Federal Executive of the Association of Retail Merchants of Canada.

NEW COPPER WELDING PROCESS.

Scientific circles are interested in the discovery of a process for welding copper, which has been made by a Winnipeg blacksmith. It is said the process has been thoroughly tested and found perfect, and that copper can be welded to copper or to other metals without impairing the electrical conductivity and other properties of the metal. The process is said to be very simple and no more costly than the welding of steel. The work can be done with a forge, blowpipe or any apparatus which will heat the metal cherry red.

PAINT, OIL AND BRUSH TRADES

PAINT TRAVELERS' CONVENTION.

A MONSTER convention of travelling salesmen of the Sherwin-Williams Paint Company is billed to be held at Montreal during the first week of November, about 200 of the most successful and intelligent commercial men in America being expected to be present. The gathering is an annual feature of the company's business procedure, the salesmen from every section of Canada and the United States being brought together for conference at some central point. Last year Atlantic City was the meeting place but this year Montreal is to be the rendezvous. The large Canadian plant of the Sherwin-Williams Company will be inspected and much of an educational value is certain to result. Following this convention the Canadian travellers will confer together during the second week and the plan of campaign during the coming year will be laid out. Mr. C. C. Ballantyne, the new president of the Canadian Manufacturers' Association, will be the host in his capacity as head of the Canadian interests of the Sherwin-Williams Company.

THE EFFECT OF COLORS.

ATTENTION has been called to the fact that the selection of wall papers is not merely a matter of aesthetic consideration. In these days of highly-wrought nervous systems, due to the rush and strain of American living, the effect of colors on the nerves must be taken into account, and, bearing this fact in mind, the following rules are given :

The most restful wall paper is of one tint, without any pattern ; this is good for nervous people. Have you ever, when ill in bed, reduced yourself to a state of nervous irritation by trying to join a big sunflower or something to its stalk, which has wandered away in the pattern ?

Red is supposed to be rather bad for nerves, but is warm and cosy, especially if patternless.

Browns and drabs depress sensitive folks, while a rich, clear brown is said to be quieting and soothing.

Green is splendid for the eyes, and ought to be in writing rooms and libraries.

Clear, but not too vivid, a yellow produces exhilaration and self-confidence, we are told, while violet and lavender depress the spirits.

Too much white is glaring and comfortless, and all pale blues are delightful to the eye.

MAKING TURPENTINE IN B. C.

Operations in the making of turpentine have commenced at Victoria, B.C., the plant of the Monarch Wood Extraction Company being used in the extraction of turpentine and other products from green native fir. The plant was manufactured at the Victoria Machinery Depot and is in charge of Mr. M. Calkins, who proposes to enlarge it as soon as the results warrant. The raw material is found in green native fir. That rich in pitch is preferred, and the company is offering $4.50 a cord for suitable supplies.

PETROLEUM IN QUEBEC.

Survey parties returned from exploration work in Northern Quebec report finding a lake, the shores of which were soaked with petroleum. The oil was said to be bubbling up through the water which was 50 feet deep. If the pressure of the water were removed it is estimated that the petroleum would shoot upwards over 200 feet. The discovery will be further investigated.

WINTER'S EFFECT ON PAINT.

THE weakening effect of rust on steel work and metal surfaces is a source of expense and annoyance to those who have not adopted thorough methods of protection. It is the heat of the Summer's sun that brings about most rapidly those changes which result in the loss of elasticity and protective power in protective coatings. The rain and snow storms of Winter, with their excess of moisture, naturally result in the corrosion of metal surfaces on which the protective coating has been thus weakened by the heat of Summer.

Paints applied in the Fall dry about as quickly as in the Summer, yet the complete oxidation of the upper portions of the film is not hastened as it is in the hotter days of the Summer. Therefore the original elasticity is maintained longer and the coating is much more durable. The clear, dry weather and the absence of sudden showers of the Fall season, provide conditions most favorable for the proper application and drying of paints.

Particular attention should be given to the selection of capable painters, the right kind of brushes and good paints. Great care should be used in selecting good paints that will hold practically their original shade and resist corrosive agencies for a long length of time.

Notwithstanding the large color house which the Canada Paint Co. erected last year, in close proximity to their present works in Montreal, they have, owing to pressure of business, been compelled to purchase another property on William street, and will immediately proceed to extend their present facilities.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, September 22, 1905.

THE state of the paint trade during the past week has been somewhat erratic, some days showing a remarkable flow of orders, and others being noted for their scarcity. On the whole it may be stated, however, that a fair average amount of paint and varnish is being shipped. No local conditions have occurred to affect the price of staples one way or the other. There has, however, been a firming in the price of white lead, and in fact of all lead products. Retail hardware dealers are free buyers of this staple, largely due to the feeling that an increase in price will be the result of the coming into effect of the recent changes in the tariff, which took place on the 15th of this month. The advance already made in lead products covers this duty, however.

Linseed oil has shown strength during the week, and ruling prices at present are 1c. in advance of what we quoted last issue.

Turpentine—The advance of turpentine has been checked this week and we give the same prices as before. Our quotations are as follows: Single barrel 91c. per gallon. Two barrels or over, 90c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—A recovery from the decline recently published is to be shown this week. The following prices are firm: Raw, one to four barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. f.o.b. Montreal. Net 30 days

Ground White Lead—No further advances have occurred, those already noted covering the new conditions inaugurated on the 15th of September, by the total working of the tariff changes. We give the following prices: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—The demand is fairly active. We quote: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)— We quote prices as follows: Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2. 5 1-4c.

Putty—A normal business is being done. We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Prices are still unchanged. We are quoting prices as follows: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—All lead products are pretty active, after the inauguration of the new duties on these goods, and red lead naturally shares in this activity. We give prices as follows: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—The advance made by some firms has not yet become general. We quote: Pure white in barrels, $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints— Business is of fair volume and the prices asked are the same as all season: From $1.20 to $1.40 per gallon.

Castor Oil—Firmness characterizes the market, which is quite active. We quote: 8 1-2c. to 9 1-2c., according to lots.

Refined Petroleum—Reports from the United States show that the price of both crude and refined oils has been advanced by the Standard Oil Co., but that has not as yet affected the Canadian trade. Under the circumstances, however, the prices must of a certainty soon go up.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 22, 1905.

PRICES continue without much change slight stiffening being noted in many of the lines quoted. Turpentine is stronger than last week, owing to the steady buying. Linseed is also strengthening, and while the mills at Baden are crushing some seed and will be ready to ship during the coming week, there is little possibility of low prices. The tendency will still be upwards, as the home product will command higher prices than the imported article.

Crude oil in Canada has advanced in response to the jump made in the American markets, but the refined petroleum has not advanced yet. Higher figures are expected daily, however, and a very large volume of business is being done at the low figures still ruling. Rush orders for delivery before the close of navigation are also common.

The glass situation is unchanged and prices continue unchanged, although one Toronto firm lost $9,000 worth of stock on the Virginian wreck and another house lost $1,500 worth.

A little of everything is being bought and the total amount of business done in paints, varnishes, etc., is very large.

White Lead — Ex Toronto, pure

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Canadian crude oil has advanced 5c. and an increase in refined is expected. We quote: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current market quotations.

WINDOW GLASS—MONTREAL.

Efforts are now being made to rescue the steamer Virginian and if they are successful some small quantities of glass may be well enough preserved to put on the market. Another favorable condition is the report that no further strike is likely to occur in the Belgian glass fields. The rumor which was given some credence a few weeks ago is now believed to have been a hoax.

Stocks are now arriving in small quantities and more shipments are expected in the next few days. The advance made last week, however, continues firm, and no falling off is to be expected for some weeks. We quote prices: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

A POINT IN PAINT MAKING.

THE influence of temperature on the consistency of paint is not always sufficiently appreciated, either in the factory or the painter's shop, says an exchange. On the whole the manufacturer is less liable to deviate from the standard of composition on account of differences in the consistency of his raw materials caused by variations in temperature than the painter is when the latter thins his paints himself, because the manufacturer works to a definite formula and uses the same relative proportion of the various ingredients Winter and Summer. The painter, on the other hand, mixes his paints by judgment only, his sole criterion being the ease with which the material can be spread with a brush, and this necessarily implies that the proportion of the various thinners varies according to the temperature and other local conditions. What manufacturers have to bear in mind, however, is that if they send out in Winter a material compounded in a manner suitable for Summer use, or vice versa, there is a strong inducement offered to the user to tamper with the material. This fact is well known to makers of enamels and enamel paints, and at least one well-known firm of makers of a renowned specialty take the simple precaution of recommending their customers, should they find the enamel somewhat "stout," to stand the can in a pail of warm water before use. Simple advice surely, and calculated to save time in investigating painters' complaints.

ZINC PLANT AT FRANK.

Zinc treating works at Frank, Alberta, will be in active operation shortly and the Canadian Metal Company are preparing to treat zinc ores of all grades from the mines in British Columbia. The company owns its own mines but will also handle the output of independent mining companies.

GLASS FACTORY AT CAYUGA.

American glass manufacturers are said to be behind the proposition to establish a glass factory at Cayuga. Excellent glass sand is said to exist in large quantities near Cayuga while the supply of natural gas being piped through the district by the Dominion Natural Gas Company makes available a cheap fuel suitable for manufacturing purposes.

Article XV.

IRON PIPE CONNECTIONS.

FOR the benefit of those who are not constantly working on iron pipe, and who are not familiar with all of the devices used for making final connections between two sections of work,

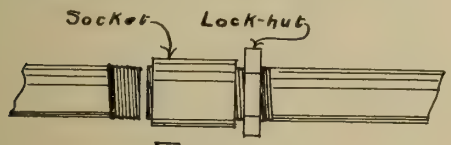

Fig 1

or of the particular adaptations of each of them, it is thought that a short discussion in connection with the accompanying illustrations may not be amiss.

Figure 1 shows a "socket and lock-nut connection, which is made by threading one piece of pipe a sufficient length to allow a lock-nut and socket to be freely screwed on until the end of the pipe comes through to the outer face of the socket, so that when the two pieces of pipe to be connected together are placed opposite each other, as shown in figure 1, the socket may be unscrewed off the long thread on to the short one, until it is perfectly tight on the latter.

The lock-nut is then unscrewed until it is within three or four threads of the socket, when the space between the two is tightly wound with cotton wick, which has first been well oiled. Then the lock-nut is still further unscrewed, until it is made tight against the end of the socket, and a certain amount of the cotton wick having been squeezed into the thread and between the lock-nut and socket, makes a good joint at that end of the latter.

Figure 2 shows a lock-nut connection

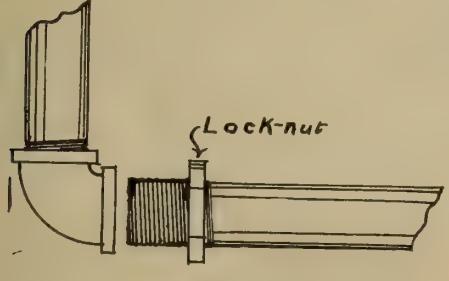

Fig 2

which is used where a socket is not required, as for instance where fittings such as elbows or T's are to be connected together. In this case the "running thread," as it is termed in the steam-fitter's parlance, is made a little more than twice as long as the ordinary thread, then a lock-nut is screwed up to the "butt," the running thread is then screwed into a fitting twice as far as it would go ordinarily, when, if it be screwed back into another fitting until it is right in the latter, there will be several threads of the running thread still remaining in fitting into which it was first screwed.

After the thread on the opposite end of the pipe has been "made up" tight the lock-nut is then screwed up tight to the face of the fitting, the fitter having first introduced the cotton wick before referred to.

Regarding the connection shown in figure 2 it may be mentioned that, where possible, it is better to use a "T" than an elbow, as the running thread has a tendency to strike the back of the latter, though, when necessary, the elbow may be used.

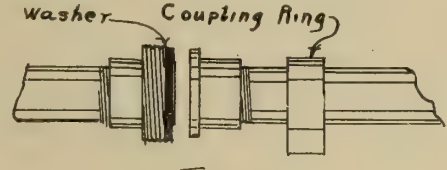

Fig 3.

Figure 3 represents a "union," which is made in three pieces, one piece each for the ends of the pipes to be joined together, and a coupling ring, which in the illustration is shown lying loose on the pipe to the right of the coupling. The means of connecting the coupling is to first place between the two pieces screwed on the ends of the pipes a washer of leather, rubber, lead or other soft substance, and then to draw them together with the coupling ring, which, by screwing up on the thread of the end farthest away from it, draws the two ends together and tightens them against the washer.

This style of connection does very well for gas, or water at an even temperature, but where there is a constant variation in temperature the expansion and contraction in the metals is liable to cause the washer to become loose, and in that way to leak.

The latter objection is overcome in the connection shown in figure 4, which is called a "right-and-left connection." It is made with a socket having in one end a right-hand thread, and in the other end a left-hand thread, one pipe having a right thread and the other a left thread to correspond, and they are put together as follows:

Screw the socket up on one pipe as far as is necessary to make it tight, then draw a chalk mark on the socket, and one on the pipe, both being in a line. Then slowly unscrew the socket, counting the number of revolutions which it makes, and mark down the result. Repeat the operation on the other

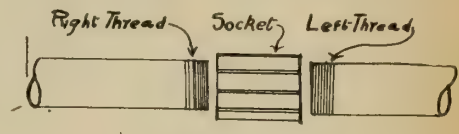

Fig 4.

thread and mark down the revolutions in the same way.

Now assuming that the right thread made six revolutions and the left thread made only four revolutions, the socket would have to be screwed two threads on the right thread, leaving still four threads or revolutions to be turned before it would become tight, and if both ends are then drawn together and the socket turned four revolutions it will become tight at both ends.

The great advantage of this connection is that it is iron to iron when "made up," and will be as safe as any other part of the piping system.

Elbows are also made with a left thread, so that using a piece of pipe between two fittings, the latter taking the place of the socket, the same results may be obtained.

The connections mentioned so far are those which are used on all sizes of pipe up to 2 in. in diameter, and that shown in figure 5, which is known as a "flange" joint, is made of two flanges, one of which screws on each end of pipe to be joined together. A thin washer is placed between them after they have been screwed up tight on the pipes, and then they are drawn tightly together by a series of heavy bolts and nuts arranged around the outer edge.

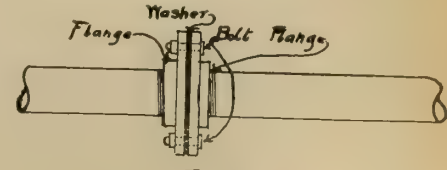

Fig 5.

HEATING AND VENTILATING HOSPITALS.

IN considering the question of the successful heating and ventilating of hospitals, Mr. B. E. Taylor, in an article in a recent issue of the Brickbuilder, presents the following views:

The successful heating and ventilating of a hospital is a vital problem, and

the only absolute rules that can be laid down are those treating, not of manner or detail, but of practical results. The requirement is for all northern latitudes from 3,000 to 5,000 feet of air per patient each hour, warmed indirectly to at least 70 degrees F., whatever the outside temperature. This means an expensive plant and an enormous coal consumption, also every precaution in the way of double run of sash or double glazing, vaulted walls, &c., to assist as much as possible in preventing the loss of heat through unnecessary radiation. In warmer climates construction can be simpler and cheaper, and the radiation can be less with more "direct" work, relying largely on natural circulation for ventilation. Some authorities maintain with considerable force that the sick wards should not be maintained at an unvarying temperature, that nature in its continual change of many degrees from noon to midnight shows that there is a necessity in this direction. If this varying condition is necessary in maintaining health in those who are well, why not in restoring health ? The perfect heating plant will be in a special building by itself or one having the laundry in a second story. It should be installed under one of the hospital buildings only as a temporary expedient when the finances absolutely preclude a special building. High pressure steam should be installed in a complete, perfected plant, to be used for power, laundry machinery, electric light, ventilation, and sterilizing, as well as for heating. If the institution is too small to employ an experienced engineer, a low-pressure steam boiler can be installed for heating, and a small high-pressure boiler can be used for the other purposes enumerated. In small hospitals it will generally be found best for economical reasons, both as to installation and maintenance, to install a low-pressure system. This will give no power for laundry machinery, which in a very small plant must be omitted, and it will give no high-pressure steam for disinfecting, sterilizing, or for inducing draft in the vent flues, all of which are quite necessary, but are impossible without considerable expense. The sterilizing can be done quite as successfully by gas, and in the Summer the ventilation can be by means of the windows and doors and special flues in toilets, heated by Bunsen burners. Whenever possible, it is wise to install a small high-pressure boiler in addition to the low-pressure heating boiler for the various purposes named above. Some of the most expensive and elaborate schemes of ventilation are often found to be perfect in theory, but are very defective in actual use. It takes coal to run a perfect system of heating and ventilation, and the engineer is apt to try to show his great worth by saving coal and by cutting off the electric fans as much as possible. In an institution inspected some time since, where the superintendent was very proud of his ventilating scheme by which the foul air was drawn up into the loft by electric fans and discharged through roof ventilators, it was suggested that sometimes these fans were found entirely cut off, with no ventilation at all. He was sure that his never were, and went up to the loft to investigate, and found, what was apparent from the stagnant air in the wards, that they were not running. While inspecting last year one of the finest and newest hospitals in a remote section of the country, I found very small hot air inlets and vents and foul air everywhere, and apparently no ventilation at all. Expressing to the engineer a desire to make a study of his heating and ventilating plant, he informed me that they had the most complete and expensive scheme in the entire west, laid out by the best engineers, and that the results were perfect. Replying to my statement that the air seemed bad and the ventilation poor, he said, "These fans will do it and do it quick. Why, you can imagine how thick the air gets in the wards by morning. You can almost cut it with a knife. I start the fans, and in half an hour the air is as pure and sweet as outdoors." To run the fans half an hour, morning and night, may be ventilation, but it ought not to be so considered. What is needed is not fresh pure air in two half-hour periods per day, but all the time. In a small hospital situated in a broad expanse of green lawns, the necessity of taking the air for the heating coils from an elevation is not as necessary as in the city hospital, where the air at the ground level is full of dust and dirt and all manner of impurities. Under these ideal conditions the introduction of air through wire mesh covered openings directly to the stacks serves the purpose very well, but a dust setting chamber that has the bottom hinged for cleaning is a safeguard, and the stacks should have slides so placed that every portion of the rough dust collecting castings can be thoroughly brushed and cleaned. When the basement under the pavilion is used as a plenum chamber, as is quite commonly the case, the entire room should be finished as smooth as possible with a plastered ceiling, smooth pointed walls covered with a coat of limewash and a coat of cheap waterproof enamel, with a smooth cement concrete floor sloping to a catch basin and drain, so that it can be thoroughly cleansed and purified with a hose. Usually the heating and ventilating flues are entirely inaccessible, and are therefore never cleaned. The register faces are screwed in place and never removed. They are generally so constructed as to be specially fitted to catch and hold dust and filth and be almost impossible to thoroughly cleanse, and the flues are loaded with filth that can never be removed. The best practice is to omit, as far as possible, the register face entirely, and thus to open both the heating flue and the vent flue to inspection and dusting. When the heating flue enters the room, as it should, at least eight feet from the floor, there is no danger of its being used by patients to throw rubbish into, and the vent flue opening at the floor is much more easily adjusted without a register. The mixing valve under the control of the nurse can be arranged to the amount and quality of the air admitted.

MR. WIGGS' BRITISH TRIP.

MR. W. H. WIGGS, of the Mechanics' Supply Co., Quebec, has written a brilliant and thorough account of the recent trip of the Canadian Manufacturers' Association to Great Britain and France, which the Quebec Chronicle secured for publication while the association was holding its annual meeting at Quebec during the past week.

Mr. Wiggs' impressions, written in a characteristic, clear, descriptive vein, deserve the earnest attention of all interested in England. A representative of Hardware and Metal had the pleasure of reading advance proofs and nothing better, clearer or more comprehensive has been written to commemorate this memorable tour. Minute details are made doubly interesting told by this keen observer. This work was accomplished on the return trip and Mr. Wiggs deserves the heartiest thanks from the association for his self-imposed task. Incidentally he considered Canada afforded more scope for general advancement than England, and his curt remarks regarding vastly different conditions in England than in Canada are entertaining. Mr. Wiggs prepared for the manufacturers a few pleasing souvenirs, to remind them of their Quebec visit and his immense building on St. Peter street was thrown open to all. The trip has put him in splendid shape, and he is again at the helm with renewed activity.

EARLY GAS LIGHTING.

It was not until 1792 that William Murdoch began his investigations into the properties of gases given off by various substances, which eventuated in the establishment of coal gas as an illuminating agent. In 1798, being then employed in the workshop of Boulton & Watt, he fitted up an apparatus for the manufacture of gas in that establishment, with which it was partly lighted. By 1816 gas lighting had become common in London. So rapid was the progress of this new mode of illumination that in a very few years it was in general use throughout the United Kingdom.

NEW VENTILATING SYSTEM.

A LOUISVILLE man, H. E. Thompson, has invented a ventilating skylight which is composed of two parts, movable cap with stationary bottom, operated by means of lever, spring motor, electricity and weights, or by hand. The cap fits in both ventilating and non-ventilating position, and is thereby held firmly against accidental displacement by pedestrians, trucks, or other disturbing agents thereon.

Mr. Thompson, in speaking of the device, says : "The object of my invention is to afford a ready ventilation, exclude rain, dust, etc., and will not shut off the light passing through the closure. To automatically open or close all ventilators throughout the building, and at the same time to accurately locate undue rise of temperature in building, register number of building, number of floor, number of apartment, number of room, and degree of heat contained therein, and can be regulated to any degree of heat. My device will meet these requirements, as is shown diagramatically in this cut. The operation of the device will be readily understood from the foregoing—that is to say, a person on the outside by means of a suitable instrument inserted in notch, will bodily shift the cap as desired, while if one is on the under side, he will readily do the same by means of lever. Upon the breaking out of a fire, the combustible connections, which may be located at any suitable points in the building, will enable thermo-electric fire alarm device to permit the weight to drop and change caps vice versa, as may be desired. Since the opening in the caps register with the prisms when the open-

ings in the ventilators are closed, it is evident that light is permitted to enter the building, notwithstanding rain, dust, etc., are excluded. Also, since the edges of the caps extend over the hinges, as shown, ample protection of the latter is assured. Said caps or covers are suitably pivoted on links, and to levers provided with handles the latter are pivoted to the stationary bottom."

The inventor solicits correspondence and requests that mention be made of the name of this paper.

LEAD VS. IRON PIPE.

IF we lived up to our name we plumbers should know little or nothing about iron pipe work, since the word plumber means, primarily, "a worker in lead," and the day is not far past when the plumber's skill as a craftsman was judged entirely by his ability to construct every required form of lead work, says J. M. Healey in a paper read at the banquet of the Indiana Master Plumbers' Convention. Latterly machine-made traps and bends, and the substitution of cast iron in place of lead soil pipe, have changed in some degree the art of the plumber, although it still holds good that lead work is the distinctive province of the plumber. The changes of which I speak have come to stay, and most of us would not, if we could, go back to the primitive methods of hand work. We are willing also to admit that lead soil pipe, because of its weight, was liable to sag and lose its shape, and that a source of danger lay in its liability to be punctured by nails or gnawed through by the pestiferous rat. Cast iron soil pipe is not subject to these dangers, and, happy thought, it must still be jointed with a lead caulk, with the chances all for cracked hubs or open joints if a tinker attempts to do the caulking. The plumber is still needed to run a stack of soil pipe, and he must be a good plumber if the stack is to be run in good and workmanlike manner. For water supply pipes, range boiler connections, and exposed wastes and overflows, we still maintain that lead pipe, not iron pipe, is the proper material. There is something more than trade jealousy back of our contempt when we apply the epithet of "iron-pipe plumber" to the tinker who tries to break into the trade by the back door of the screwed fitting, rather than by the front door or the wiped joint. Iron pipe is not a suitable material for the purposes I have mentioned for several reasons which will readily occur to anyone who stops to give the matter a moment's thought. In the first place, iron, when unprotected, is liable to rust, thus contaminating the water which flows through supply pipes of this material, or, when iron pipe is used for wastes or overflows, endangering the whole system by stopping up of the pipes with rust, or by offering a means for the escape of sewer gas through scarcely visible but none the less dangerous rust holes. The use of galvanized pipe on supplies is to be condemned, because of danger of poisoning the water. Experience has shown this to be a very grave danger, and one to which the plumber should not permit the householder and his family to be subjected, no matter how great the desire to practice a false economy. Another weak point of iron pipe, which is all too often overlooked, is its peculiar liability to suffer destruction by means of electrolysis. Iron pipes, offering, as they do, a good conductor for stray currents of electricity, are very often eaten away in a surprisingly short time causing useless leakage of water, and if the iron pipe happens to have been used for waste purposes, offering a ready escape for sewer gas into the air of the house. No, my friends, our old friend, the lead pipe, should not be suffered to give way to the new-fangled notion of the iron pipe with screwed joint. I say this, not out of any desire to block the wheels of progress, but out of an honest conviction that no substitute for lead pipe has been found so manifestly superior as to threaten the "lead pipe cinch" of the plumber, about which we hear so much. For exposed work, nickle-plated supplies and wastes are deservedly growing in favor, while for high-class residence work, brass soil and waste pipes are finding a limited use. With this condition of things, however, we should have no quarrel, for on this class of work a tinker does not get a chance to bid. But for all-round utility in the plumbing of all sorts and conditions of houses, lead pipe still remains the plumber's old reliable stand-by, and I predict that it will be many years, perhaps many generations, before the plumber will cease to be, as he has always been throughout the thousands of years in which he has plied his honorable craft, a worker in lead.

SMOKE-TESTING APPARATUS.

G. NEWHOUSE, Leeds, England, has invented a new apparatus which he describes as follows: (1) An apparatus for applying the smoke test to drains and the like, comprising a smoke chamber surrounded by a water jacket and having below a false bottom for smoke producing material, an inlet for air under pressure, said smoke chamber being separated from a coned outlet by a perforated partition, as above set forth. (2) An apparatus for applying the smoke test to drains and the like, comprising a water jacket encircling a smoke chamber, a non-return valve to and a coned outlet from said chamber, a perforated support and perforated partition in said chamber, and an air compressor mounted on said water jacket, the lever handle of which is fulcrumed on the jacket, as above described. (3) An apparatus for applying the smoke test to drains and the like, comprising a smoke chamber enclosed by a water jacket, an air compressor mounted on the jacket and arranged to supply air to the underside of a perforated false bottom to the smoke chamber, and a handle or sling secured upon the jacket, whereby the apparatus may be carried, as above described. (4) In an apparatus for applying the smoke test to drains and the like, a smoke chamber having a coned outlet with intermediate perforated partition, said chamber and cone being encircled by water jacket as above described.

WATER FOR THE FARM.

THE farmer is a large user of water, for no farming operations can be carried on without it. The installation of a water plant for farm purposes—for use in the market house and barn—is, therefore, one of the first essentials to successful farming. This, however, should be but the first step, for a water plant that gives running water in the barn can afford the same facility in the kitchen at small additional expense. No farm wife need be told of the superior merits of running water in her kitchen over the old-fashioned well, or the hardly less archaic hand pump. The latter has, of course, some conveniences over the former, but it entails weary work, and adds a quite unnecessary burden to the many labors that fall to the wife an the farm.

But assuming that running water has been brought into the farm kitchen, the question may well be asked, Why stop there? Why not a bathroom; why not a separate bathroom for the men help? Why not shower baths and all the conveniences that modern plumbing has brought to a relatively high degree of efficiency? All these things should follow as a matter of course, and no doubt would do so could the former be convinced as to their utility, and be satisfied that their installation would not cripple his financial resources. The latter point is apt to have more weight than the former. There is unquestionably a large field for business in this direction. —American Homes and Gardens.

INVERTED BURNER POPULAR.

A FEATURE of the coming winter's trade will be the inverted burner, says the Birmingham Hardwareman. This new member of the incandescent family will give a decided impetus to the incandescent industry. Hitherto the electric light has had a strong pull over gas by reason of the pleasingly artistic and variously ornamental methods of its installation, but now that the inverted gas burner has arrived the rivals are equally matched, and the fight for supremacy will be keener than ever. The inverted burner lends itself admirably to artistic treatment, some inverted lights in a photographic window being repeatedly mistaken for electric. The lights were suspended with flexible metallic tubes, which possibly had something to do with the illusion. Flexible tubes are particularly suitable for shop window lighting, as when the window is out for dressing the burners may be unscrewed and removed, and the tubes hung up out of the way, a very manifest advantage over fixed pendants or brackets. The mantle of the inverted burner, too, has a much longer life than the orthodox pattern, owing to the security of its attachment, and this should be a strong selling point in its favor. An inverted burner should be fixed and lighted over the counter or in the window in order that the effect of the light in its downward concentration may be seen by the customers. It is the ideal light for table work of any kind.

NEW MINERS' SAFETY LAMP.

A Paris correspondent states that French science is busying itself just now with perfecting the illumination of the working seams of mines. Efforts have been directed towards producing a safety electric lamp, and one was recently submitted to the Academy of Sciences by the inventor, M. Tommasi. His incandescent globe is enclosed in a glass cylinder, and there are several acting arrangements for the inlet and the outlet of air, which is also effectually excluded by the breaking of the globe. The exclusion of air, of course, instantly extinguishes the lamp.

POINTS

VITAL INTEREST
to
YOU
about
The NATURO Closet.

It is new and creates attention wherever introduced.

This attention is productive of business, because:

The numerous good features possessed by it are easily apparent.

Its construction tends to promote health.

It is accessible to children as well as adults.

It cannot become wet or soiled.

It is fast superseding the old-style closets in the estimation of architects and contractors.

It combines all the good qualities of other closets with many unique to itself.

Our advertising of it brings trade to the store of our customers.

MUELLER COMPRESSION WORK

Special Grade Bibb

c-235

The spattering of a compression bibb can't be prevented by the plumber, yet he may be blamed for the nuisance if he happens to install a bibb of that sort.

Mueller Compression Bibbs are so designed that they deliver the water in an even solid stream. When one is installed nobody can be blamed with putting in a spattering nuisance.

Mueller Compression Bibbs are made in standard, extra and special grades, in plain or hose patterns and in all styles of pipe connection. The bibb illustrated is the special grade, plain pattern and S.O.T. style.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

SOVEREIGN RADIATORS.

AN interesting exhibit made at the recent convention of the National Association of Master Plumbers and Steam Fitters, at Winnipeg, was that of Sovereign Radiators manufactured at Guelph by the Taylor-Forbes Co. The accompanying illustration gives a slight idea of the beauty of the exhibit, it being impossible to reproduce the picture in such a manner as to do justice to the technical features of the Sovereign line. The radiators were closely inspected by the majority of the delegates, the general expression of opinion being that the quality of the castings could not be excelled, and that for beauty of design the "Sovereign" would more than hold its own with any radiators made. The screwed nipple connection was also very favorably commented upon. Mr. H. R. Flett, Toronto representative of the company, was in charge of the exhibit, and his personal popularity had much to do with the fact that the Taylor-Forbes display was one of the centres where a crowd of jolly delegates could always be found.

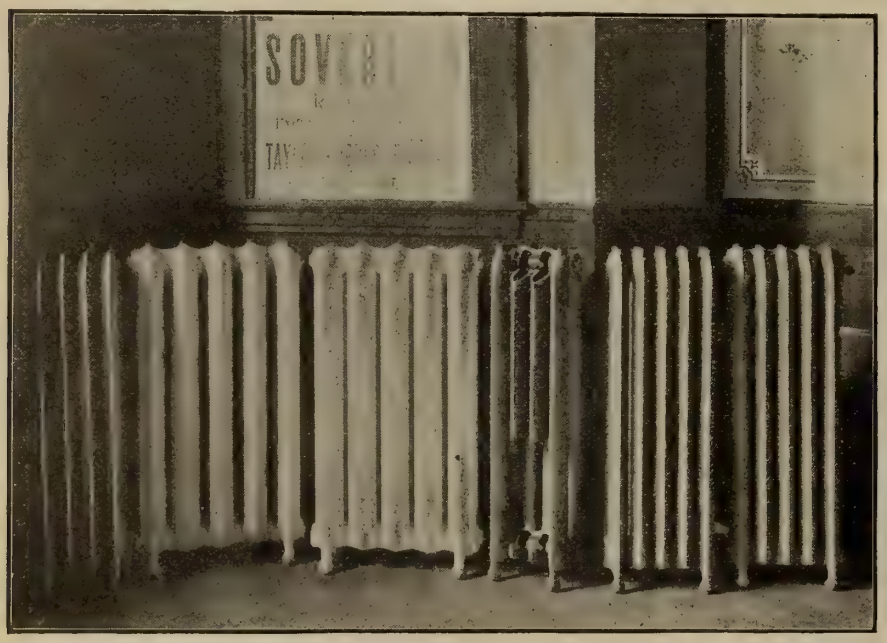

Exhibit of "Sovereign" Radiators, made by the Taylor-Forbes Company, at the National Master Plumbers' and Steamfitters' Convention at Winnipeg.

MORE HEAT FROM A RADIATOR.

IN many rooms the radiator is either too small or the steam pressure is too low to maintain a comfortable temperature in severe weather. If the tenant is enjoying the many advantages afforded by central station electric lighting service, the matter can easily be remedied. Take the fan that kept you cool all summer and set it where it can blow against a large part of the radiator's surface. Turn it on at low speed, or at high if necessary, and your cold room will soon be thoroughly warmed. The philosophy of the thing is that steam at a low pressure carries much less latent heat than steam at a high pressure, and therefore warms the radiator so poorly that only a slight draft of air arises around the pipes, and condensation is slow. With the fan in operation there is a forced draft against the radiator that conducts a great deal more heat away from the iron, cooling it so that much more condensation of steam occurs inside it. The heat thus snatched from the reluctant radiator is held in the circulating atmosphere of the room, which is soon changed from cold to warm at a trifling cost for electric energy.

"BOB" HARRISON RESIGNS.

MR. R. W. HARRISON, of Harrison & Robertson, Toronto, has resigned from the Board of Directors of the Toronto Master Plumbers' Association. Mr. Harrison is very popular and is well known to the trade generally because of his active work at conventions, he having been one of the Canadian delegates to the National Steamfitters' Convention at Atlantic City in June and one of the Toronto representatives at the Winnipeg convention, being chosen Ontario vice-president of the National Association of the Master Plumbers and Steamfitters of Canada at the latter gathering.

Mr. William Mansell, of the Purdy Mansell Company, has been elected to the vacancy on the board created by Mr. Harrison's resignation.

NEW PLUMBING FIRM.

Messrs. Cunningham & Humphries have commenced business in temporary quarters on Mechanics street, Paris. Mr. Cunningham was formerly with Glennister & Co., Paris, while Mr. Humphries had several years experience as a plumber at Brantford.

ELECTRICITY IN FARMING.

Among the latest of the many novel adaptations of electricity is its application to the raising of ducks on a farm in New Jersey. Even the eggs are examined in an electric egg tester. The incubators are ventilated by electrically driven exhaust fans, and it is said that since this application healthier and livelier ducklings are hatched than before. An electric motor mixes the food (something over a ton a day) for the full-grown fowls. Electricity also assists in a novel way in the fattening of the ducks for market. In the words of the owner: "Frequently during the night one duck would become frightened at something, and set up a quack. Before long the whole 5,000 would be at it, and keep on scurrying about in their coops all night. This would materially reduce their weight, even in one night, and was also decidedly unpleasant. I put a small electric light in each coop, and kept it burning all night. Ever since then the ducks have been getting a good night's rest, and their market value has considerably increased."

PLUMBING GOSSIP.

Mr. James Boxall, Lindsay, was a visitor to Toronto this week.

Mr. R. G. Sturgeon, Peterboro, called on Toronto supply houses this week.

W. J. Cluff, of R. J. Cluff & Co., Toronto, was in Montreal on Tuesday.

T. G. McClatchie, of Hemmingford, visited Montreal on business this week.

A. Majeau, tinsmith, of Joliette, paid a flying business visit to Montreal last Monday.

John Howie, plumber, of St. Johns, called on the local supply houses during the week.

Thomas Norris, of Norris & Lockerby, Galt, spent a couple of days in Toronto this week.

J. J. Foley, of the American Brass and Copper Co., New York, was in Toronto this week.

Andrew and R. Wright have returned to Toronto from a holiday trip to Niagara-on-the-Lake.

Mr. Carslake, of Carslake & Lockerby, Collingwood, called on Toronto supply houses this week.

L. J. Moger, tinsmith and roofer, of St. Antoine, was in Montreal this week in connection with his business.

J. Gray, plumber, will remove from 121 Queen street east to 244 Church street, Toronto, on October 1st.

Mr. John Wright, 403 Yonge street, Toronto, is holidaying at Niagara-on-the-Lake, where fishing is reported good.

F. Smith, Stratford, has disposed of his plumbing business to Messrs. McDonald & Henry, plumbers, of Mitchell. The new firm will conduct both businesses in future. Mr. Smith is undecided as to his future plans.

Mr. H. R. Flett, Toronto representative of the Taylor-Forbes Co., has returned from a two months' trip to British Columbia and the west. Everywhere he met with a favorable reception when talking "Sovereign" radiators.

E. A. Rogers, of the James Robertson Co., Toronto, returned a few days ago from a two months' trip to Manitoba and British Columbia. Mr. Rogers reports that there is an unlimited amount of business available in the west, but it must be gone after. The St. Paul supply houses cover the territory well.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 22, 1905.

SUMMER resorts are now practically deserted and, with the return of holiday pleasure-seekers, business in the plumbing trade is receiving quite an impetus. Many good sized contracts have been let for repairs and extensions to heating equipment, and naturally, many needed repairs to sanitation are being undertaken at the same time. Cold weather is not so far away now, and there is a big rush to prepare plumbing systems to withstand the rigor of an eastern winter.

The supply houses are kept busy shipping orders for pipe to all parts of the Province, the demand being unusually big.

Lead has continued unchanged, and is very steady. There is no prospect of any further drop in the immediate future. Brass goods maintain their high figure, due to the steadiness of coppers. There are sensational reports of large shipments of copper having been made to China in order to shorten the supply. It will be brought back when needed. This rumor lacks confirmation, but it shows the tendency of the market.

Range Boilers—Good sales are reported. Our prices are: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Lead products are much steadier than last week, and prices are unchanged. We quote: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

Iron Pipe Fittings—All kinds of pipe and fittings are in great demand, and are being used in extensive repairs to heating and plumbing, especially in Montreal city. Our prices: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—The brisk demand continues, and prices are very firm with an upward tendency. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch. $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—The price lists, as revised last week, are still holding good. Sales are reported in good volume. Prices are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—No change has occurred in the price of solder, which is still reported as follows: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 22, 1905.

HEATING contracts are now the feature of the trade, some very large ones being closed and supply houses finding the call for goods remarkably active. Boilers, furnaces, radiators, piping, etc., are all in strong demand and prices are very firm. With the exception of cast iron steam fittings, stocks are plentiful.

Old prices rule on all lines and brass goods have not yet taken their expected jump upwards. Other lines are all firm with buying active. Soil pipe is still scarce.

Lead Pipe—Prices hold firm and buying is very active. We quote: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Shipments are behind owing to foundries being unable to fill orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Stocks are reported scarce in steam pipe fittings. Demand is strong and prices firm Quotations continue as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers— Talk of advance is current, but the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Buying continues active, prices being quite

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

Cloth bound, Price, postpaid **$1.00**

The American Hardware Store

A Manual of Approved Methods of Arranging and Displaying Hardware.

By R. R. WILLIAMS, Hardware Editor of the IRON AGE.

This book is descriptive of the best methods of accommodating and displaying the large variety of goods which are carried in stock in representative American and Canadian hardware stores. Copiously illustrated, and worth many times its cost to every progressive hardware dealer.

Cloth bound, 6¾ x 9¾, 576 pages. Price, postpaid. **$3.00**

firm. We quote following prices : 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe — Stocks are normal and prices continue steady. We quote : Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—A strong demand exists with prices firm at the old figures. Our quotations are as follows: Bar solder, half-and-half guaranteed, 19 1-2c., refined 18 1-4c., and wiping at 17 1-2c.

Enameled Ware— Demand is very active and producers are kept busy. We still quote the following prices: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50, special, $15.50; 3 inch rim, first quality, $19; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality $19, special, $17; 3 inch rim, first quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.

FAIRBANK'S VALVES.

Fairbanks valves will be used entirely in the equipment of the new chocolate plant being erected in Montreal for the Walter M. Lowney Company, a contract having been closed between the Canadian Fairbanks Company and Lumsden & Van Stone, contractors, Boston, to this effect.

The Fairbanks Company have just completed an order for the Canada Car Company for Fairbanks valves, covering their entire equipment. The Canada Car Company are using 160 lbs. steam pressure and carrying 153 super-heat. All gate and globe valves on their steam lines were fitted with special metal rings and are giving excellent satisfaction.

A SIMPLE OIL FILTER.

One of the most satisfactory of oil filters is "home made," requiring only two cans and a supply of cotton wicking. The cans are placed on different levels, and the upper one filled with the oil to be filtered. The cotton wicking is saturated with clean oil, and suspended over the edge of the upper can, forming a capillary syphon. The end of the wicking should be allowed to touch, or lie on, the bottom of the upper can. The capacity is only limited by the size of the cans, and the number of wicks used.

Business Changes

Ontario.

L. B. Tape, agricultural implements, Ridgetown, has sold out to F. A. Gosnell.

James A. Childs, blacksmith, North Toronto, is advertising his business for sale.

The Mouterdes Electric Accumulator Co., Limited, Montreal, have been incorporated.

Manitoba and N. W. T.

The Calgary Natural Gas Co., Limited, Calgary, have been incorporated.

The Pass Power & Lighting Co., Limited, Frank, have been incorporated.

Robert Laughton, hardware merchant, Leavings, has been succeeded by R. & R. Laughton.

James Murphy, blacksmith, Minnedosa, has sold out to G. R. Charleson.

KEEP A LIST OF LEAKS.

DID you ever seriously try to make a list of the holes through which possibly little bits of profit were constantly dribbling away ? Overbuying is a leak. An extra five off for taking a quantity is a saving, but if the quantity lasts you a period of four times as long as the time it takes to get a fresh supply from your market, you have lost the profit on a part of your capital unnecessarily tied up. And if that loss of profit exceeds your saving, it is not necessary to have additional proof that overbuying may be a leak. Stowing away goods likely to sell on sight, where they cannot be seen, is a hole through which leak profits that might have been made had the goods been properly displayed. Failing to care for goods, so that they get shop-worn and must, therefore, be sold at reduced prices is another leak. Holding of seasonable goods until they become utterly out of style, rather than getting rid of them by taking a small loss, is still another leak.

Letting windows go unwashed and unchanged is a decided leak. Not only are you thus losing profit on sales that might be directly caused by particular displays in the windows, but you are also failing to improve an opportunity right at hand in the form of those windows to give passers-by most convincing reasons for coming into your store. Letting your bills go unpaid until too late to secure discounts that may be offered James A. Childs, blacksmith, North discounts are so small but that they afford a profit over and above the interest that would have to be paid were it necessary to borrow money with which to pay the bills.

The Imperial Engine Co., Limited, intend to commence the manufacture of rotary engines at Cayuga shortly.

WALTER GROSE, MONTREAL — Sales Agent for the Dominion

A Superlative Line of Heating Apparatus

The Oxford System

Wide-Awake Dealers Like Our Products because they yield as big a margin of profit as the common kind of goods and give such satisfaction to the customer that his trade is riveted to their stores.

Why Oxford Boilers are Superior The Oxford Hot Water Boiler is a marvel of scientific construction. The sloping walls of the upper part of the fire-pot give unequalled exposure to the action of the heat; the double-sized first water section with bell-shaped flues adds further to the heating capacity, which is greater than that of any other boiler yet made, figuring on the amount of fuel consumed.

Metal to Metal Joints Throughout All connections are made with our Oxford Steel Push Nipple, and the use of gaskets or washers is completely obviated. You will immediately perceive the great benefits derived from this new method of construction.

A Perfect Grate The triangular revolving grate with hollow bars gives all the air-space necessary without allowing any fuel to be wasted. It is very easily dumped and by releasing two screws any bar can be removed through the ash-pit.

Oxford Hot Water and Steam Radiators

used with the Oxford Boilers form a heating system whose efficiency has no equal. They are built of cast-iron, rust-proof, and have unusual strength. Every loop is tested to 120 pounds cold water pressure both before and after being assembled. They are joined with the Oxford Steel Push Nipple, obviating the use of gaskets or washers and, therefore, all possibility of leaking.

Our Guarantee All Oxford Radiators are sold under guarantee of proper construction or replacement of defective castings. WE SELL ONLY TO THE TRADE, and will protect your interests in every way.

STAG-HANDLED CARVERS.

MAKERS of stag-handled carvers appear to think that there is some likelihood of the public taste reviving in this class of work. At one time, in spite of the somewhat clumsy appearance of these goods, it was the fashion for a certain section of the community to use them in preference to anything else, but their reign was by no means as long as the manufacturers could have wished. The output of Sheffield not so very long ago was extraordinary in this department, and many retailers were led to stock them somewhat heavily. Then the demand fell considerably, and they could not be got rid of even at reduced prices, the result being that a quantity remained on hand. Now it seems there is a better call for them, though it is not, so far as can be gathered, a general one. The demand may turn out to be purely local, though the makers incline to the belief that it will spread. The one great point in their favor is of course their preservation, the white handles being so liable to stain with wear.

WHERE THE SOIL IS ROCKY.

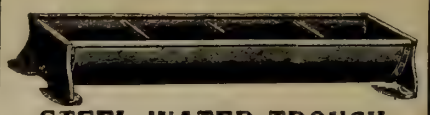
VIRGINIA, as everybody knows, is a State of wonderful and diversified agricultural wealth, but there are portions of it where the farms appear to be composed chiefly of rock, and the thin top dressing of soil requires frequent treatment with fertilizers in order to produce any kind of crop.

As the result of a trade a man from Ohio came into possession of a store in a small town in one of the rockiest of these sections. His first proceeding was to take an inventory of his stock on hand. Much to his surprise he found there was not a plow in the store. He immediately despatched an order for a dozen plows to the nearest wholesale supply house, 50 or 100 miles distant.

The next day he "hitched up" and took a drive over the neighborhood, noting the general outlook and making enquiries among the residents.

On returning to his store he sent this message to his wholesale house:

"Cancel order for plows. Send me a ton of blasting powder."—Youth's Companion.



KNIFE CLEANING TABLETS.

Tablets superceding machines and boards as they are applied direct to the knife, and also good as a razor strop application, are as follows: 8 lbs. hard yellow soap, 2 lbs. water, 2 lbs. kieselguhr, 1 lb. rottenstone, 1-2 lb. flour emery or pumice. Shave the soap, put in a pan and gently melt with the water, stirring well, then add the powders, previously sifted together, stir and run out in trays or moulds.

CEMENTS FOR CAST-IRON PIPES.

A good cement for cast-iron pipes is as follows: Roman cement, 48 lbs.; white lead, 16 lbs.; litharge, 4 lbs.; rosin, 2 lbs.; old linseed oil, first boiled with half its weight of rosin, sufficient to make a paste. Mix equal weights of quicklime, Roman cement, pipe-clay, and loam to a paste with linseed oil. Melt together rosin and tallow, and then add plaster of Paris to consistency.

HARDWARE MEN: Our

STEEL WATER TROUGH

s a seller—something the average farmer has been waiting for.

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

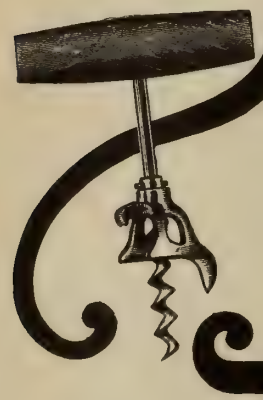
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.



THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

THE MACLEAN PUBLISHING TRADE JOURNAL PUBLISHERS MONTREAL AND TORONTO

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M. E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid. - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

The Fisk
Detachable Motor Tire

Better than any "air pressure" tire because of its safety. It can't creep or roll or come off, no matter what happens.

Better than any other "fastened" tire, because of its simple and easy adjustment, its circular air chamber which keeps the inner tube from injury and because of its flat and solid base which adds to its comfort and safety.

HARDWARE STORE WINDOW DISPLAY

By L. J. A. Surveyer, Montreal

ONE of the great secrets of success in a retail hardware business is the attractive displaying of goods to be sold. An artistically arranged window has been the foundation of many a man's succes. A good window display will invariably attract the attention of passers by. A love for the beautiful, novel, elegant and lovely is always appreciated by the public. After admiration follows the desire of possession. Time spent in the thoughtful consideration of how best to arrange a shop window so as to make it attractive, is time and labor never wasted.

For some reason hardware merchants do not seem to devote as much attention to their show windows as the dry goods dealers and clothiers. No business possesses in itself greater facilities and a greater variety of materials for fine and attractive display than does the hardware business. The window is, as it were, a vestibule to the customers.

Rated by His Window.

The hardware merchant who wants to make his store well known will find no better help than a correctly dressed window. In his window are seen his taste, thrift, cleanliness and business methods, and he is rated accordingly. No matter where the proprietor may be, his window is always there, exposed to the public gaze, and continually inviting the public to the store. When competition is keen, a dealer has to try different ways to gain trade. In time gone by the customer would seek the retailer, but to-day it is the opposite and the dealer must look for the purchaser. Hence the advantage of having seasonable and well cared for show windows, which will serve as a continual reminder that goods are up to date and the proprietor is progressive.

An Attractive Window is Not Costly.

A hardware window can be made attractive in many ways. One of the main points is cleanliness. An attractive, artistic window does not cost any more for rent or taxes than the repulsive, ugly show of a dusty pile of goods. A display, however simple, should be true, and have the merits of neatness and taste. The badly kept window draws no attention to the store. It is the one with the novel, striking ideas and catchy display which takes the public eye and never fails to increase trade.

Some hardware merchants believe that to have an attractive window is a costly and difficult thing. There is nothing hard about it. He who thinks so should begin by making a small display of a certain line of goods on the counter, and if satisfied, should place it in his window, and he will soon learn that, to use an old proverb, "There is nothing like trying," and that "Thoughts beget thoughts."

Window Decorations Always Pay.

Hardware merchants are now admitting the fact that window dressing is most important to the retailer as an advertising agent. There are still some who do not cultivate it. There are some stores in the city and some in suburban towns where no attention is paid to shop windows. The dusty and smoky plate glass remains uncleaned and fly specked for months and even years. The result is that trade is stagnant, and the store gets no new customers, clerks get discharged one by one, and finally the placard "Store and Fixtures for Sale" is hung up. In the writer's 18 years' experience in the retail hardware business he has met with no case in which window dressing did not pay according to the attention devoted to it. This testimony is believed to be universal among progressive business men. To the ambitious retail hardware clerk there is no better passport to success and advancement to be found than to be an artistic window dresser. There are numbers of clerks who are able to do something in that way. Anyone capable of selling goods behind the counter can become an expert window dresser if he gives a little time and thought to it.

Increased Sales Traced to Exhibits.

When the writer engaged with the present firm some 16 years ago, no attention whatever had been paid to the show window. The bottom was flat, covered with an old piece of carpet, and with no decoration in the sides or back of the window. A few articles were thrown in now and again without being changed or the plate glass cleaned. People were never seen looking in because there was nothing there to draw attention and hardly anything worthy to look at. After giving the object in view a few thoughts, the writer went to work and if the verdict and congratulations of a great many persons may be used, the window may be called a success. No matter at what hour of the day, or specially in the evening, people are seen looking in the window.

Window Display of L. J. A. Surveyer's Store in Montreal.

Never has much time or money been spent to make it look attractive. Judgment and ideas were used; old boards, empty cases, are what the platforms are made of. They were then covered with cambric. A point was made to have glass kept scrupulously clean, and all goods displayed, polished or dusted with a cloth. Since then business has increased. Stock was augmented as well as the staff. Almost every day customers would come in and ask for goods "same as in the window." It has been noticed that persons asking for some line of

goods kept in stock with which the clerk was not familiar would be told, "We have not got them." The customer would answer, "But I saw them in your window."

An ill dressed window shows lack of enterprise and poor business methods, and it is an eyesore to the place where it is located. A little attention given to the window each week has proved to be a good investment.

The Relation to Local Advertising.

A newspaper advertisement merely indicates that one has hardware of a certain kind for sale. A good window display does not only do the same, but at the same time and at far less cost, stimulates curiosity and creates a desire to possess the article displayed. There are many persons who, when they intend to purchase a certain class of hardware, invariably seek the window where the goods are well arranged. A few hours of a clerk's time each week is all that is required to do effective advertising by window dressing. The cost is economical.

It is desirable to show the same kind of goods in the window as are at the time advertised in the newspaper. To the large advertiser his window should be a supplement to the local paper, over which it has the advantage of presenting at once the object the purchaser might happen to need. If well displayed in the window the customer follows out his inteneion to purchase, and the sale is made. There are many people who do not take or have time to read a newspaper advertisement, who, while passing a store, would stop and look at the window, if it is attractive. Attention paid to the store window is one of the best advertisements. Many merchants in various lines of business are unanimous in one sentiment, and that is, a show window well dressed is the storekeeper's card to the passer by.

The writer believes in having more than one article shown at a time. Let the seasonable goods occupy the best place in the window, but this does not prevent the showing of other lines as well, without spoiling the effect of the seasonable or special display. On the contrary it seems to help the special goods to sell faster. One reason for believing this is that two years ago a sale was made to out of town people on account of the show window. They came to this city to purchase all that was required for a country villa they had decided to build. They entered the store and the first words uttered were, "You have a general display of goods in your window. We have been walking around town, but nobody seems to have such an assortment as you display in your window. I hope that we will find everything that we want here!" They did.

A sale of over $500 was made, and they have been regular customers for smaller purchases ever since. Another reason for believing in general display is that it is more attractive and interesting to the masses. If a window should be quite small it would be preferable to display but one specialty or a few lines of goods, making the display according to the size of the window.

Delegates and Supply House Representatives at the Canadian Master Plumbers' and Steamfitters' Convention at Winnipeg, 1905.

Marking Prices on Goods.

Marking prices on goods depends very much upon the locality and the class of trade the hardware merchant has to deal with. If the store be located in a wealthy thoroughfore, goods ticketed in window would not be so important as if the store were situated among the working class. The writer believes in putting prices only on seasonable goods and other articles the merchant wants to push. Too many price tickets in a window takes away the effect of the special goods ticketed. Experience has taught that no more than six or seven prices of goods should be given in a miscellaneous hardware show window. Most people, especially women, believe that when a few articles only are ticketed, they are cheap and bargains. If the display were of only two or three kinds of goods it would be advisable to have prices marked.

Utilizing an Employe's Skill.

In choosing an employe to take charge of show windows, let it be suggested that the one to be selected give evidence of possessing judgment, taste and a trained eye for quick comprehension of how to arrange, distribute and shape a variety of articles so as to present a pleasing exhibition. Before a clerk begins to dress his window he should plan out what he is going to do and have at least three principal objects in view:

1. To display goods kept in store.
2. To draw the attention of the people to the store.
3. To make the exhibit such that it will excite in the people the desire of possession.

If a window is arranged correctly it is a silent and continuous salesman, and sooner or later purchases are made. Goods bought are spoken of to acquaintances, and goods seen in the windows are remembered long after they have been taken out. A clerk with an ordinary amount of intelligence and some ambition, who is not afraid of work and who will take a little pains, will gradually learn to make a good display and become a source of revenue to his employer. The writer has often noticed while dressing his own windows how quickly thoughts would come to his mind and thus enable him to make a finer display than he had planned.

In the hardware business there is gradually opening a wider field for window dressers. In some lines of trade here in Canada they employ persons who make a profession of window dressing. One large department store has a young man who gets $2,000 a year for dressing the windows. If other lines of business can afford to spend so much money for the care of their windows they must have found it a paying investment. Why should it not be the same with the hardware show window?

It is unofficially reported that the Joggin Coal Mining Co., of Nova Scotia, is about to erect a large coal-handling plant at St. John, N.B., the intention being when it is completed to bring coal in to that point from Joggins and there ship it to Montreal in the cars which will be emptied in St. John this winter.

CANADA'S TRADE FOR 1904.

Canada's aggregate trade for the fiscal year ending June 30th last amounted to $470,151,289, being $2,581,749 less than for the previous fiscal year, but showing a gain of $222,512,669 when compared with the best year under Conservative administration. The imports totalled $266,834,417, an increase of $7,622,614 over the preceding twelve months. The exports amounted to $203,316,872, a decrease of over $10,000,000 in domestic and foreign goods combined and of $7,559,493 in domestic products only. Of dutiable goods there were imported $157,164,975, a gain of $1,056,522, and of free goods $109,669,442, an improvement of $6,566,092 over the previous year. The latter item is most satisfactory, indicating as it does increasing importation of raw materials for manufacturing purposes. Following is a statement of imports and exports in detail:

	1905.	1904.
Aggregate trade	$470,151,289	$472,733,038
Total imports	266 834,417	259,211,803
Total free goods	109,669,442	103,103,350
Total dutiable goods	157,164,975	156,108,453
Total exports	203,316,872	213,521,235
Imports by countries—		
British possessions	$ 73,662,290	$ 73,675,411
Foreign countries	193,172 127	185,536,392
Great Britain	60,538,811	61,960,909
United States	166,040,890	156,997,180
France	7,201,679	6,289,362
Germany	6,642,139	8,028,544
Exports by countries—		
British possessions	$113,576,548	$128,951,548
Foreign countries	57,595,213	52,104,130
Great Britain	101,958,771	117,591,376
United States	75 563,015	70,713,078
France	1,511,298	1,597,928
Germany	1,146,654	1,819,223

THE "SUGGESTION" SYSTEM.

HOW to get the benefit of your employes' brains as well as the output of their hands is the problem which has been solved by the National Cash Register Company at its factory in Dayton, Ohio. The means of solving the problem is the "suggestion system," which has been in effect at the Dayton factory since 1894, and which has in recent years been adopted to a greater or less extent in other factories.

The scheme of securing suggestions from employes has been carried out to a very complete extent at the N. C. R. factory, and arrangements have been made by which any suggestion from any member of the organization is easily and quickly brought to the attention of the authorities. The employes have taken hold with marked enthusiasm, and each year thousands of suggestions are received. For handling these and all complaints as well, a department of complaints and suggestions has been organized.

Any employe desiring to make a suggestion for the betterment of the tools, methods or output in his own or another department, writes it out on a slip of paper and drops it into a suggestion box; or, if he prefers, he writes it out on a manifolding autographic register, retaining the original copy and leaving the duplicate copy in the register. In all cases an employe signs his name to a suggestion, and also the name of the department in which he is employed. The suggestion boxes and autographic registers are distributed in all departments, and suggestions are collected from them twice a week by a representative of the Complaint and Suggestion Committee. Upon the receipt of a suggestion it is given a number, entered in a book provided for that purpose. The secretary of the committee then refers it to the head of the department to which the maker of the suggestion belongs, or to the party most directly interested, not disclosing the name of the suggester. It frequently happens that the suggestion concerns more than one department, in which case it is investigated through all of the departments, and its bearing on each considered. The original suggestion is never sent with the correspondence during the investigation, but it is retained in the office of the committee and a copy is made for investigation purposes, or the subject matter is embodied in the correspondence.

If, upon investigation, the suggestion proves practicable, it is put into effect and the originator is notified by letter, which authorizes him to receive one dollar from the cashier in payment for the suggestion. If, on the other hand, the suggestion is rejected, the author is duly notified.

Where possible the reasons for the rejection are given and in either case the suggester is encouraged to try again. At the end of each quarter the best suggestions are selected from those adopted during the three months past, and forty-four quarterly prizes are awarded. The amounts of these prizes vary from time to time. At present the value of the quarterly prizes is $750. Twenty-five prizes aggregating $450 are offered to the employes in the making division. Twelve prizes aggregating $200 are offered to the employes in the office division, and seven prizes aggregating $100 are offered to the members of the selling force. The prizes in both the making division and the office include a first and a second prize for foremen, heads of departments and assistants. They are eligible to compete for these prizes only.

A few examples of the suggestions may prove interesting. In the Indicator Department, where are printed the metal parts of the register which indicate the amount of a transaction recorded, it had been the practice for years to mix certain kinds of ink by stirring them in a bucket, then straining through a cloth. One of the women employes thinking this could be done better and more economically by machine, devised an apparatus, drew the plans and turned them over to the company. As a result the ink is now quickly and cheaply strained by a machine.

In the Typewriting Department the

girls are constantly suggesting ways of saving time and labor, and in the office divisions new schemes for counting and recording are constantly being worked out. As one specific instance of how great a saving one suggestion made, it might be well to cite a suggestion recently made by which the expense of supplies for a certain kind of register is reduced nine cents per machine. This means a saving of $1,200 a year at the present time.

The pecuniary value to the company is not the only valuable result of the system. Under its encouragement the employes are taught to think for themselves and become more efficient workers. At the same time the man or woman who has originality is brought to the attention of the management, and in this way is placed in direct line for promotion.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Ames Buggies.

A VERY neat catalogue has been supplied us by F. A. Ames, Owensboro, Ken. The blue grass region has long been famed for the quality of horses it has grown, and if the Ames buggies are any criterion of the style of work done in the Southern States it is certain that the carriages are fully equal to the Kentucky thoroughbreds. The catalogue is entitled "Buggies Bred in Old Kentucky," and copies can be had on request.

Household Specialties.

A neat little catalogue of household specialties has been sent us by the Rollman Mfg. Co., Mount Joy, Pa., all of the lines shown being certain to meet with a large sale, amongst them being meat and fruit choppers, cherry cedar peach stoners, potato cutters and apple cutters, the latter tool being an exceptionally neat arrangement, which gracefully slices the apple and digs out the core at the same time. All of these tools are well illustrated, and interesting descriptions are given descriptive of the manner of cleaning the various tools.

An Amusing Picture.

Goodrich Rubber Goods are the feature of an amusing picture being sent out by the B. F. Goodrich Co., Akron, O. The picture is entitled "The Goodrich Rubber Man's Vacation," and is an annual event, the company adopting this method of bringing their goods before their customers. Copies of the picture can be secured by any reader of Hardware and Metal who mentions having seen the offer in this paper.

Tinsmiths' Machinery.

Crimpers and groovers are tersely described in the neat folder issued by the Indianapolis Elbow Co., Indianapolis, Ind., manufacturers of the Globe Rural Free Delivery Box and other hardware specialties. The 20th Century Groover for hand use is illustrated, and a short article is also given descriptive of its working advantages. Wheeler's Patent Lightning Pipe Crimper is also written up in the folder and prices on both of these lines are given. Cuts of Wheeler Slip Roll forming machines and circular shears of Wheeler pattern are also given. Hardwaremen and tinsmiths who desire copies of pamphlets describing these machines can secure them by mentioning this paper in their letter of inquiry.

Ormsby's Fireproof Goods.

Fireproof windows are the chief subject of the beautiful catalogue of 88 pages and cover just issued by A. B. Ormsby, Limited, Toronto and Winnipeg. Fireproof doors, shutters and skylights are also illustrated and a good deal of descriptive matter is given in addition to drawings and photographs illustrative of the various classes of work done in this line. From the number of cuts reproduced, showing buildings which have been erected in Toronto's wholesale district since the great fire of a year ago, it is seen that Ormsby's Fireproof Windows are in great demand, the water sprinkling apparatus being also very extensively used. Metal window frames glazed with wire glass are considered to be entirely fireproof, and their general adoption shows the favor in which they are held by architects and builders. Tin armored fireproof doors, fireproof shutters, skylights, etc., and corrugated iron sheets, cornices, ventilators, etc., are also thoroughly described. Mention Hardware and Metal if you send for a copy of the catalogue.

AND NO DISCHARGE

Bang the hammer of a loaded Iver Johnson against the table; throw the revolver around as carelessly as you would a handkerchief; handle it as roughly as you may, and there can be positively no discharge—don't do this with *any other make of revolver* if you value your life.

You can't fire it unless you pull the Trigger

IVER JOHNSON REVOLVERS

are the *only* revolvers absolutely safe from accidental discharge—*as safe in the home as the kitchen stove.* The reason lies in the fact that the hammer *never* touches the firing pin, and the firing pin never comes in contact with the cartridge except when the trigger is pulled *all the way back.*

Our Booklet, "SHOTS," mailed free with our descriptive catalogue, *proves* these claims and describes Iver Johnsons with complete illustrations. May we send it to you?

IVER JOHNSON SAFETY AUTOMATIC

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply you.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

THE MAN ON THE JOB.

ONE hardware dealer in a town of moderate size takes the following somewhat unique method to get in touch with the various special lines his business makes it necessary for him to handle, and secure an occasional good advertising suggestion with very little trouble. Each employe at the time he is hired is required to file a paper stating what he has worked at in his past life and what the line of business into which his place of birth first brought him. These files are frequently consulted, and when some special line of advertising is to be prepared the assistance of these clerks is called for. For instance, when the copy is being made up for the sale of plows or some other line of agricultural machinery, all clerks who have been reared on a farm are called upon to give in a list of the chief difficulties which beset the farmer in the use of the plow; its usual defects; the points where, under special conditions, it seems to fall short of satisfactory service. If the subject is builders' hardware the carpenter's son is at a premium; for drillers' tools, a clerk who has some personal knowledge of practical well-drilling is a bonanza. The idea is to get the advertising written from the standpoint of the consumer, one of the difficult things for the manufacturer or dealer to do. It takes the man who has been on the job himself to know just what his successors want and what they frequently find; and no one else is on the job of plows quite so well as the fellow who has stood between the handles "when the wind was strong."

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

IT is understood that the Nova Scotia Coal & Iron Co. are proposing to establish a shovel factory at North Sydney, N.S. Picks and miners' tools would also be manufactured for the trade in the Maritime Provinces and Newfoundland.

The Elk Lumber and Manufacturing Co. will build new mills at Hosmer, B. C.

The Manning Wood Fiber Co. of Toronto established a factory at Owen Sound.

The C.P.R. have decided to immediately construct a line of railway into the town of Macleod, Alberta.

William Gray & Sons, carriage manufacturers, Chatham, intend establishing a branch factory at Winnipeg.

Red Deer, Alberta, ratepayers have voted to spend $10,000 to aid the erection of a flour mill and elevator at that point.

Berlin is endeavoring to induce the London Machine & Tool Co. to move from London. Various inducements are being offered.

A company has been incorporated at Truro to build a railway to Parrsboro and to Maccan.

The Dominion Geological Survey staff is trying to locate an iron belt in New Brunswick similar to the one discovered in Nova Scotia.

One of the largest American farm implement companies is negotiating for a site and power, intending to locate a large plant at Fort William.

W. J. Pendray's large silk works at Victoria, B.C., are to be enlarged and $45,000 will be spent on a new plant to be established at Sehl's Point in Victoria, B.C.

A new woodenware factory has been established at Hampton, N.B., to manufacture pails and tubs. The capital stock is $24,000, and W. J. Brown, Hampton, is general manager.

R. M. Brown and J. G. Milne of Toronto propose to establish a grist mill at New Liskeard, and may also install an electric plant to furnish the town with power and light.

The C.P.R. is erecting a new machine shop at Peterboro, covering an area of 100 x 60 feet. It is considered necessary for the repairs of locomotives in service between Montreal and Toronto.

The Welland Electric Power Transmission with headquarters at St. Catharines contemplate running power lines to Hamilton and Toronto. The company is backed by New York capital.

Canadian General Electric Co. have secured option on large tracts of land adjoining their present site at Peterboro and propose to spend between $30,000 and $40,000 in increasing their plant.

It is the reported intention of the Lake Superior Corporation's Algoma Steel Company to build a fifty-ton charcoal iron furnace at its plant at Sault Ste. Marie, Ont., especially to take care of the output of the company's charcoal kilns.

The company which is to undertake the development of the Kaministiqua Falls near Port Arthur has let contracts to the Canadian General Electric Co. for erecting equipment worth about $200,000.

The Case Threshing Machine Co., Racine, Wis., are planning to erect a mammoth factory at Winnipeg, in order to supply the Canadian trade. A site has already been secured on the shores of Lake Winnipeg.

Despite the doubling of the import duty on agricultural machinery entering Australia, one of the largest consignments of reapers, binders, threshers and harvesters ever shipped from Vancouver left last week for Sydney.

The Newfoundland Government has about completed the laying of a cable from Canso to Port Au Basque, Nfld., to give the colony telegraphic communication with the mainland independent of the service of the Anglo-American Co.

The rumor that the Steel Trust intends to locate in Canada has been revived. Sandwich is to be the site of the new plant. According to a Detroit despatch land is being acquired along the Detroit River and a very large plant will be established.

The Manitoba Peat Company's plant at Fort Frances has commenced operations. The plant is operated by electricity and contains a large amount of machinery and several storage sheds. The company owns about twenty square miles of peat bogs in the vicinity.

The C.P.R. has ordered rolling stock from the Angus shops at Montreal amounting in value to $3,000,000. The order includes 25 parlor, sleeping and dining cars, 90 passenger coaches and 3,000 freight cars. Twenty-five additional locomotives are already on order.

The Fowler Canadian Co. propose erecting large additions to their factory at Hamilton, the cost of which will be between $50,000 and $60,000. The company now employs about 150 hands and the new additions are made in order that they may enter the beef slaughter business.

It is reported that the Baylis Pulp & Paper Co., of Binghamton, N.Y., have purchased three hundred miles of spruce timber on the River Ste. Anne, thirty miles from Quebec city, at a cost of about $1,000,000. The company will establish pulp and paper mills in that vicinity to cost $700,000.

The Hart Corundum Wheel Company and the Canadian Corundum Company of Hamilton have amalgamated under the name of the Canadian Hart Corundum Wheel Company, with a capital stock of $75,000. The applicants for the charter were the following : Charles D. Warren, Toronto ; C. S. Wilcox, George F. Webb, Harley E. Sherk, directors, and Andrew S. Devine and F. H. Whitton.

The trade returns for the last fiscal year as compared with 1904 show a re-

markable decline in the imports into Canada from the United States of the leading implements for farm use. It may be significant that no complaint was made by the western implement representatives while the Tariff Commission was sitting at Winnipeg, although several other manufacturers were heard from. Taking the ten most important items of import for farm use, which must of necessity be the most important in the consuming west, one finds that the total in 1904 was $4,006,534, while in 1905 it was only $2,804,425, a decrease of $1,202,109, or about one-third. In nearly every item there was a decrease, showing the general trend in the direction of home purchasing.

Companies Incorporated.

The Martin-Senour Co., capital stock $50,000, purpose to manufacture and deal in paints, colors, chemicals, varnishes, oils, glass and all ingredients and products thereof.

Boston Varnish Company, capital stock $50,000, for the purpose to manufacture and deal in paints, chemicals, varnishes, oils, glass and all ingredients relating thereto.

The Canadian Glass Manufacturing Co., Montreal, capital stock $25,000, purpose to manufacture and sell all kinds of glassware, and all material and machinery connected with the same.

The General Brass Works, Toronto, purpose to deal in brass goods, share capital $50,000. Directors are James William Baby, Alfred William Ecclestone and Alexander Watt, all of Hamilton, Ont.

The Sherwin-Williams Co., of Ohio, have been registered in Ontario to carry on the business in paints, oils and colors. The company have appointed A. J. Russell Snow, of Toronto, solicitor, to be their attorney.

Canadian Swensons, Lindsay, share capital $1,600, for the purpose of dealing in all kinds of machinery, etc. Directors to be Henry Rustad of Cresco, Iowa, Isaac Ernest Weldon and William Henry Kennedy of Lindsay, Ont.

The Canadian Tap and Die Co., Galt, purpose to carry on business connected with screw-cutting tools, machinery, etc. Share capital to be $40,000, directors William Morley Preston, Galt, and Franklin Edward Snow and Frank Orrin Wells of Greenfield, Mass.

B. F. Sturtevant Company, of Massachusetts, have been registered in Ontario to manufacture and sell steam heaters, fans and other engines, electric and other motors, etc. The company have appointed John Colon Grant, of Toronto, manager, to be their attorney.

The Oshawa Heat, Light and Power Co., Toronto, purpose to manufacture and supply gas and other artificial light for heating and cooking, etc. Share capital to be $100,000, and the directors are Peter Ryan and Robert James Goudy of Toronto and Loftus Edwin Dancey of Goderich.

The Manson-Campbell Co. have been allowed to increase the capital stock of the company from $300,000 to $500,000.

The Canada Fence Company, London, Ont., purpose to manufacture and sell wire fences and wire goods, share capital to be $40,000. Directors are William Samuel Bryers Barkwell, James Emsley Sutton of London, and Donald McLachlan of Glencoe.

No. 23. OSHAWA, ONT. SEPT. 30, 1905

METAL ROOFING, LATHING and REINFORCED CONCRETE

Three Winners

It is a well-known fact that any construction made entirely of iron or steel is practically immune from the effects of lightning, as the amount of electricity accumulated in the case of a lightning stroke is allowed to distribute itself over the large surface of the roof and to flow off (as water) to the earth at many places, with greatly reduced intensity.

Conditions are quite similar in connection with buildings made entirely with armored concrete—that is, concrete reinforced with expanded metal, etc.—as the discharging current will find the roofing iron and distribution rods of an armored concrete roof struck by lightning a good conductor of electricity, so as to flow off to the more substantial girder iron with which the roofing iron is connected by expanded steel mesh.

Now, as experience has shown lightning not to be discharged to the earth in a concentrated jet from the place of striking, but to have a tendency to distribute itself on all sides if possible, the electricity will be diffused throughout the roof traversed by the net-work of iron reinforcement. The electricity being greatly reduced in intensity will have an excellent opportunity of flowing off to the ground through the metallic conduit used as a reinforcement and the steel superstructure, thus being communicated to the foundation which, in turn, transmits it to the earth.

This shows that neither artificial lightning arresters, nor other appliances of a like nature, will be required for the protection against lightning on a structure consisting of steel or iron construction or reinforced concrete.

BUILDING AND CONSTRUCTION

IMPROVED FIRE PROTECTION.

A GREAT development has recently taken place in all kinds of equipment to prevent fires, but perhaps the most novel and certainly one of the most effective of these is the water curtain which has been more or less in use for about four years. The first attempts were necessarily crude, but now the experts think that they have the water curtain down to perfection.

The great Toronto fire a little over a year ago showed conclusively the great danger there is of buildings taking fire from those which are burning in the immediate vicinity. Especially in lanes and narrow streets, the air becomes superheated so that a vacuum is formed which will crash the window glass in adjoining structures unless it be kept cool. This may also be done by a stream of water from a hose striking the heated glass, which immediately breaks and creates a back draught, thus drawing in the fire. Almost all big fires in a crowded district spread in this manner.

The idea of a "water curtain" to protect against danger of this kind has grown so fast in the past three or four years that it is now reduced to a science, and only this week a Hardware and Metal representative witnessed the testing in Montreal of what is claimed to be the latest and most complete water curtain on the American continent. This curtain has been installed by the H. G. Vogel Co., whose Canadian office is on St. George street, Montreal, and it completely envelopes the great fur warehouse of L. Gnaedinger, Son & Co., on the corner of St. Peter and Recollet streets of the same city.

This particular curtain is in three sections, one of them covering the front of the building on St. Peter street, while the other two protect the Recollet street side. They can be operated singly and independently of each other. Each section is connected with the city water main by a large galvanized pipe, from which smaller pipes of the same material are projected along the tops of the windows, in the four upper storeys. It is claimed that in a high building like this the two lower storeys will require no further protection than is afforded by water dripping from the upper part of the building. At each window is a brass sprinkler head, which perforates the pipe and is so arranged that water spouting from the pipe strikes a concave surface which splashes the water over the whole window. It is obviously impossible for these windows to become heated, and they will consequently refuse to break and let in the back draught which draws the fire after it.

In the case of buildings with wooden cornices, another pipe is laid along the cornice, and sprinkler heads placed at intervals keep the cornice soaked during the progress of a fire in the vicinity. It is obvious that a building with metal roof and cornices, whose exposed sides are equipped with a water curtain, is practically immune from fire from the outside. The force is supplied from the city water mains, but, should these give out, a steamer may be placed in commission and equally good results obtained.

In case of fire on the inside of the building automatic sprinkler systems have been introduced in many of the large warehouses and factories, so designed as to almost immediately extinguish fires which are the result of spontaneous combustion or other causes. A series of pipes, located on the ceiling, with sprinkler heads at intervals of eight feet or thereabouts, form the automatic sprinkler system. The sprinkler heads are plugged with a substance which melts at a relative low temperature, allowing the water to escape automatically and extinguish the fire. As the hottest part of any room is near the ceiling, no fire can get much headway before it is stopped by this ingenious device.

Among the Montreal business houses who have adopted the automatic sprinklers are S. S. Carsley Co., Henry Morgan & Co., W. R. Brock Co., Limited; C.P.R. Angus Shops; Canada Car Co.; Ogilvie Flour Mills; Thos. Robertson Co., Limited, and the Canada Paint Co.

The net result of the adoption of these precautions has been a reduction of between 50 and 75 per cent. in insurance rates. That this system is being extensively adopted is proven by the success attending the efforts of the H. G. Vogel Co., whose business is, exclusively, the installation of automatic sprinklers and water curtains.

BUILDING NOTES.

A labor temple is to be erected at Brantford.

A new Town Hall to cost $10,850 is to be built at Arcola, Man.

A new skating rink is to be built at Fort William by the Y.M.C.A.

The town of Qu'Appelle, Saskatchewan, is to build a Town Hall.

The Bank of Commerce is to erect a new bank building at Vancouver.

The Quebec Bank is to build a $20,000 branch bank building at Montreal.

T. L. Kinarde is building six brick houses in Hamilton to cost $9,000.

The Disciples Church at Ridgetown is being enlarged at a cost of $2,500.

Thornton & Douglas, Hamilton, are building a factory to cost $13,000.

The J. Bertram & Sons Co., Dundas, are to erect a large foundry building.

E. J. O'Neill, Guelph, is to erect a large cement warehouse in that city.

The Welcome Soap Co. are building an addition to their factory at St. John, N.B.

A $20,000 concrete bridge is to be built across the Rideau River at Ottawa.

W. F. McLaren, Hamilton, has secured a permit to erect a brick residence to cost $4,500.

Copp, Dixon & Co. have decided to rebuild their wood working factory at Sackville, N.B.

J. A. M. Atkins, Winnipeg, is to enlarge his office building by the addition of two stories.

James Wilson, Stratford, Ont., is to erect a model apartment house in that city next spring.

A stock company is being formed to erect a large summer hotel costing about $40,000 at Orillia.

R. Alexander, Vancouver, is to erect a $10,000 residence. Parr & Fee are the architects in charge.

A new brick planing mill 80x160 feet and costing $20,000 is to be erected at Sarnia by W. F. Lawrence.

A new gymnasium to cost $10,000 is to be erected in connection with the Baptist College at Woodstock, Ont.

Mrs. Fairbanks, Vancouver, is to erect a $3,500 building at Seventh and Westminster avenues, Mount Pleasant.

Campbell & Morris, Winnipeg, are to erect a business block in North Winnipeg, the block to be four stories high.

John Aitcheson has prepared plans for a modern apartment house, containing six dwellings, to be built in Winnipeg.

Burton & Smith, Brandon, are to erect a $40,000 hotel at Saskatoon, the building being 75x60 and to contain 49 bedrooms.

J. A. Brown is making extensive alterations in the New York block on Granville street, Vancouver, the work costing $20,000.

H. A. Wright, Phoenix, B.C., has secured the contract to erect a new City Hall in that town, the cost to be $4,345, including the plumbing.

William Ker, Hamilton, is to build two brick residences to cost $1,800 each and Frank Depew of the same city is to build two brick houses to cost $3,800.

W. Noble & Co., Hamilton, are to build five frame dwellings to cost $4,500 and D. Brown is to build two brick houses in the same city to cost $4,000.

Messrs. McLachlin Bros. of Arnprior will construct a concrete dam and steel bridge across the Madawaska River. The cost of the undertaking will be about $75,000.

The Jenckes Machine Company, of Sherbrooke, Que., have commenced work on their new factory buildings at St. Catharines, Ont., the contract having been awarded to Newman Bros.

Mr. Tuckwell, Winnipeg, has purchased a site in Fort Rouge West, where he will erect a private school next year. The Children's Aid Society has also purchased a site for a home in the same locality.

E. B. Dean, Vancouver, has secured a permit to erect a frame block to cost $40,000. Another permit issued in the same city was to A. McDonald for the construction of four buildings to cost $8,800.

Buildings being erected in Dauphin, Man., this year are valued at $132,000, an excellent growth for this western town. In all 70 buildings have been erected, most all valued at between $1,000 and $4,000.

The Thornton & Douglas Co., manufacturers of clothing, etc., Stratford, Ont., have purchased a large site in Hamilton, Ont., upon which they will erect a three-story factory building 110x60 feet.

MANUFACTURERS' ASSOCIATION AT QUEBEC.

Notes on the Annual Convention in the Ancient Capital.—Continued.

The Manufacturing Grocers' section had a knotty problem to solve, or rather, try to solve. They struggled with the proposed amendments to the pure food law, and after discussing it all morning decided to have another meeting a few weeks hence in Toronto. The particular problem to be solved is what constitutes pure food. If that which is injurious was the question it would not be so difficult, but when there are certain ingredients used in the manufacture of an article with a view to cheapening it, which are beneficial rather than otherwise, the wise ones are at sea. In a word, what is the standard of purity and who is to determine it? Philosophers never had a more difficult task when they essayed to determine "what is truth."

* * *

While there were a number of woolen manufacturers present, the different branches of that industry were not "strongly manned." The section, however, met and after transacting routine business adjourned to meet again shortly. The tariff is of course the chief matter of concern to the woolen manufacturers, and their attitude is the same as it has been for some time.

* * *

In the evening Quebec did itself proud. The weather outside was disagreeable, but the arrangements for the entertainment of the guests were so elaborate and complete that within the town hall, where the public reception was held, the unpleasantness of the outside was forgotten. From the sidewalk to the main entrance of the hall was erected a canopy which effectually sheltered the guests as they alighted from their carriages. Over the main entrance in letters of electric light was the word "Welcome." The corridors were hung with bunting and the Union Jack and tri-color flags, while in front of the gallery in the council chamber, where the reception took place, were the words emblazoned in electric light, "Soley les bien venu." The ladies with their bright and pretty dresses of course very much added to the scene. Addresses of welcome were made by Mayor Parent and Mr. G. A. Vandry, and responded to by Mr. W. K. McNaught, after which President W. K. George delivered his annual address. It was a masterly effort. Dancing followed the speech-making.

* * *

On Tuesday evening a reception was tendered the party at Spencerwood by Lieut.-Governor Jette.

* * *

Mr. J. M. Taylor of the Taylor-Forbes Co., manufacturers of hardware, lawn mowers and radiators, Guelph, Ont., is, with Mr. John Bertram, Sr., of the Bertram Engine Works, Dundas, the oldest member of the executive council of the Canadian Manufacturers' Association having been a member thereof for 17 years, although he is only a young man of 39. During the convention in Quebec last week his many friends presented him with a handsome "loving cup," the presentation taking place on Wednesday evening at the Chateau Frontenac.

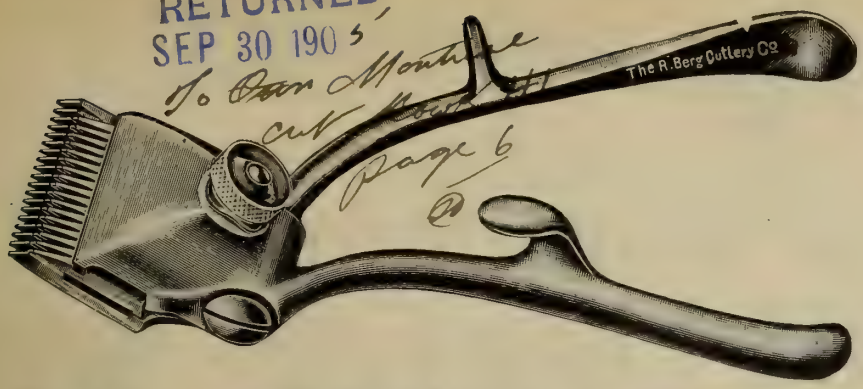
* * *

The chief interest in the election was, of course, centred around the contest for the vice-presidency. There were two aspirants for this office, namely, Mr. J. O. Thorn, of the Metallic Roofing Co., Toronto, and Mr. Harry Cockshutt, of the Cockshutt Plow Co., Brantford. Both gentlemen have been energetic workers in the interest of the association and both had a large number of friends. Mr. Cockshutt, however, was the choice of the convention for the office, the holder of which naturally steps into the chief executive office the following year. Mr. Cockshutt has just returned from a six months trip to Australia, while Mr. Thorn has been in Winnipeg for some time on business and is still there.

* * *

The banquet on Wednesday night at the Chateau Frontenac was particularly unique in one respect and that was in regard to the speeches delivered. Certainly at no previous banquet of the association was there such a galaxy of brilliant speakers. Hon. Mr. Lemieux, the Solicitor-General of the Laurier Cabinet, delivered an address the eloquence of which will not be forgotten by any one privileged to hear him. Then there was the silver-tongued Sir Wilfrid Laurier, the Hon. Mr. Fitzpatrick, Attorney-General of the Laurier Cabinet, Hon. R. L. Borden, leader of the Opposition, Lieut.-Governor Jette, to say nothing of the excellent addresses delivered by such members of the association as President Ballantyne, ex-President Geo. Drummond, and Mr. Edward Gurney

MANUFACTURERS ENTERTAINED.



Those members of the Canadian Manufacturers' Association who attended the convention recently held in the city of Quebec will not easily forget the great hospitality extended them on all sides, and the members of the reception committee of the local branch, namely, Messrs. Vandry, Amyot, Morin, Wiggs, Moisan, Ross, and others, deserve credit for the way in which they carried out their programme. Several of the leading business establishments were handsomely decorated, including Z. Paquet's large departmental building, (G. A. Vandry manager), and the large block of the Mechanics' Supply Co., (W. H. Wiggs owner), where appropriate mottoes were displayed .

The leading local paper, the Morning Chronicle, published a most interesting two-page account of the C.M.A. trip to England and France, under the heading "Personal Reminiscences," by Mr. W. H. Wiggs. Mr. Wiggs also sent to every delegate a series of picture post cards, with views of Quebec thereon, and in addition to this threw open the large showrooms of the Mechanics' Supply Co. to the members of the convention, and many of them availed themselves of the opportunity to visit this up-to-date establishment.

C. M. A. TRIP TO BRITAIN.

Mr. W. H. Wiggs, of the Mechanics' Supply Co., Quebec, informs us that any member of the association desiring a copy of the Morning Chronicle, giving a lengthy account of the association trip to Great Britain, can obtain the same by sending him a post card.

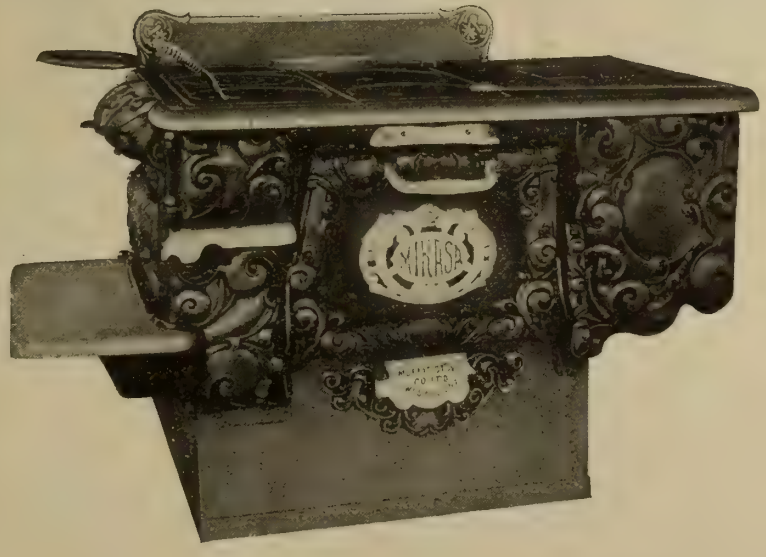
STOVES AND TINWARE

A CANADIAN TIN PLATE INDUSTRY.

FOR some months past readers of of the daily papers have been periodically treated to glowing accounts of the success attending the promotion of a new industry to operate at Morrisburg, Ont., under the name of the Canada Tin Plate & Steel Co. As a friend of all Canadian industries, Hardware and Metal has spent some time in carefully investigating the status and prospects of the new firm. In the course of our inquiry many of the largest manufacturers consuming tin plates and Canada plates (the proposed output of the new concern) have been interviewed, and their views incorporated in this article may be taken as a fair indication of the position maintained by the Canadian interests involved.

The home of the tin plate industry is in Wales, a country which is admirably adapted for the production of this article, having the necessary tin, iron and coal in large quantities. Even the great republic on our southern boundaries was content to import Welsh tin plates until a population of sixty millions seemed to warrant home production, and the Pittsburg district, with its great deposits of iron and coal, gave every promise of success. But, before the Americans could compete with foreign manufacturers, imported tin plates were discriminated against by a specific duty almost equivalent to 70 per cent. ad valorem. The American industry, thus protected, has been steadily growing, but even yet its success is scarcely assured.



Canada now has a population of, say, six millions, and is consuming a fair quantity of tin plate. As the Canadian tariff puts no duty on this article, it can be delivered to our manufacturers at a moderate expense, and it is estimated that the annual consumption of tin plate, Canada plate and sheet steel, in Canada, amounts to about $4,000,000. It is now proposed to supply this demand with goods "Made in Canada."

Whether this can be done successfully is seriously questioned by the experts whom we have consulted, the chances of success being greatly impaired by the unusual site chosen for the new company's mills. If they were situated at Sydney, in close proximity to the coal and iron mines, there would be some hope of ultimate success. But the town of Morrisburg has been chosen for no other apparent reason than that the promoter of the company holds a franchise from the municipality granting, free of cost, 700 electric horse power, free light and water, and exemption from taxation, for twenty years. It is understood that he intends handing over this franchise to the company for a consideration.

As the only advantage possessed by Morrisburg is water power, and the raw material required will have to be carried so far, we are forced to the conclusion that tin plate cannot be economically manufactured there. Conditions are very similar to those which attended the disastrous attempt to manufacture glass in Napanee some years ago. Labor will be expensive; it will mean a serious item to pay long-haulage freight on raw materials, and shipping facilities for the finished product will be by no means good. This combination of circumstances will necessitate some kind of Government assistance, and it is thought that the Morrisburg company will make a strong bid for support from that quarter.

This assistance may be given in two different ways. The company officials will probably propose that a bounty be paid on the product of the mills, but this is an idea which the Government can scarcely entertain, as the recent withdrawal of the bounty on steel rails seems to indicate a departure from that policy. In any case, the bounty must be regarded as merely preparatory to the establishment of a protective duty, which would be inevitable. The second and more probable method of assistance is a duty which, to be of any advantage, will, according to a conservative estimate, have to be at least 30 per cent., thus giving a protection of 20 per cent. against the British product.

And this is where the difficulty arises. Such a duty would jeopardize some of our oldest and most important inter-

Cut showing cast iron flue back, guuranteed for twenty years. Steel or sheet iron flue backs rust out in a few years on account of the creosote, and condensation of smoke from the stovepipe and chimney.

THE "MIKASA" NATIONAL STEEL RANGE
IN CABINET FORM

The "Mikasa" cannot be beat in its class. The rivet work on the back of the range is just as perfect as on the front.

We guarantee that not one ounce of malleable iron is used in our fire-pots or other parts of the range, except where tensile strength only is required.

The pouch feed door is extra large, and will allow you to feed the fire when the top is covered with vessels.

Our oven bottom patent truss is rivetted in such a manner to the oven bottom that it impossible to warp, crack or change its surface in any way.

Key-plate top, sectional cover, reversible duplex grate, balanced oven door, and large ash pit, are some of the many practical and selling features of the "Mikasa" Range.

MADE ONLY BY **THE MOFFAT STOVE CO., Limited, WESTON, ONT.,** WINNIPEG CALGARY

"Made in Canada"
For Forty Years

Trade C Mark

To The Trade

PLEASE NOTE: That every box of Horse Shoe Nails manufactured or sold by us, has our name and registered trade mark (the Gothic letter "C") on same. Any imitation of either on a box of Horse Nails is illegal, and a penal offence in Canada.

The "C" Brand Horse Nails are sold by us with an absolute guarantee, that every nail is perfect and ready for use, or if found otherwise, they will be exchanged free of cost, or purchase money refunded on application.

Our process of manufacture differs in many respects from other makers, and with better results.

We use exclusively the best obtainable charcoal steel nail rods made especially for our requirements in Sweden, the quality of which has the greatest tensile strength (average 54,000 lbs. per square inch), and durability of any material of which we have any knowledge or used in the world for this purpose.

Our nails are of the best proportions according to size and work required; have hardened bevelled points which will penetrate easily into the hardest hoofs, without either split or bend in driving. The heads will not break off in the most severe frosty weather, or from hard usage on hard roads or stone paved streets.

The combination which "C" brand nails have of great toughness and durability, enables the clinch to hold the shoe on firmly until worn out, or its removal is required.

We claim they are not surpassed in quality, pattern or finish by any other horse shoe nails made in the world, and therefore will be found the most economical for the farrier to use, as compared with any lower priced article made by the "cold process" or of cheaper material.

When asked to purchase second quality nails, now being pushed in Canada, please do not forget that our "C" brand is made in Canada by Canadian labor, and therefore your preference is respectfully solicited by ordering the "C" brand.

We make one quality and have only one price, namely, 4, 10 and 7½ per cent. **discount f.o.b. Montreal.**

BASE BURNERS

ARE NOW IN DEMAND

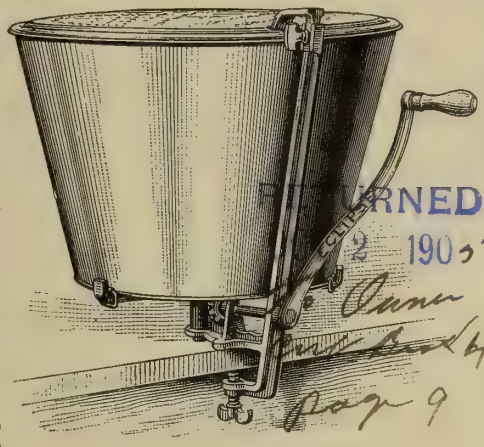
The base burner you want to buy is the base burner that will sell—the one with some individuality.

The GRAND IDEA is just a little different from anything else on the market.

A LITTLE BETTER AND A LITTLE MORE UP-TO-DATE.

The **GUELPH STOVE CO.,** Limited

Guelph



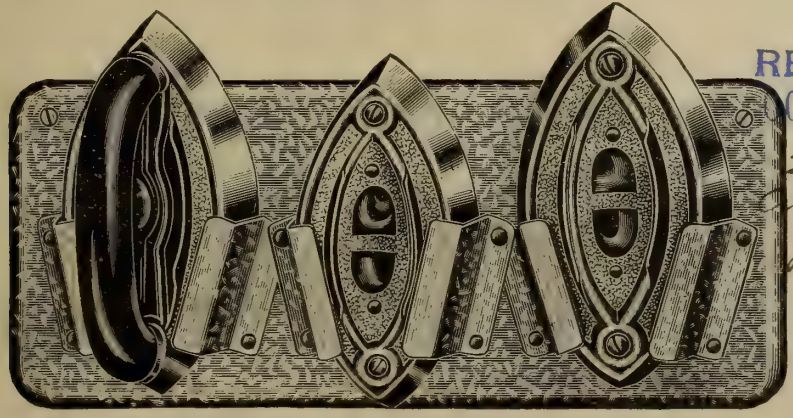
ests, and would raise prices over the whole of Canada for the benefit of one institution, which, to say the least, is merely an experiment. The principal manufacturers whose raw material is tin plate, or Canada plate, are a unit against such an imposition, and it is said that the Canadian Manufacturers' Association will strongly oppose it before the Tariff Commission.

Perhaps the greatest opposition to the scheme comes from the canners of the Dominion. It is a well-known fact that, in the case of many canned goods, the chief cost of production lies in the cans. Therefore, it may easily be seen that any increase in the cost of tin cans, which would be the result of a duty on tin plate, will be prejudicial to the interests of the canners. It is freely stated that to them a small duty on tin plate will be serious, while one adequate to protect the new industry would be nothing short of ruinous. It would permit the American canners to dump their products on our markets at a price which the Canadians could not touch. As a matter of fact, both the canners and manufacturers of general tinware are experiencing fierce competition from the American goods even now.

Briefly, the opinion of the trade who are interested in tin and Canada plate and sheet steel may be summed up in the words of W. E. Ramsay, Montreal representative of the Pedlar People, who thus expressed himself: "If there had been any need of such a thing in Canada, it would have been established long ago by Old Country firms. In the event of the Canada Tin Plate Co. starting a plant at Morrisburg, it is patent that they will approach the Government with hat in hand and ask for a high protective duty on their products. It will mean a serious blow to every producer of sheet steel materials, tin plate products, etc., and will consequently increase the price to the consumer, especially in the Northwest, where wood seems to be scarce and sheet metal products are generally used in construction. An observer has only to look back ten years (that is, since the Fielding Tariff and British Tariff became effective) and consider the great expansion that has taken place in the plants using tin plate, Canada plate and sheet steel as their raw material, to see the effect that this tariff has had on trade in general. It certainly means that if the duty is increased on the product of the proposed Morrisburg mill a few favored persons will become millionaires at the expense of every other citizen of the country."

ECLIPSE BREAD MIXER.

THE accompanying cut shows a new bread kneader, made by the Summer Mfg. Co., No. 229 Franklin street, Boston. Its novelty consists in the tinned dasher being held firmly by a set screw to the frame, which is attached by a thumb screw to the table. The can is held by three wire loops to a spider, which is revolved by a gearing underneath.



Eclipse Bread Mixer and Kneader.

The manufacturers claim: First—The dough is thoroughly kneaded, and the quality of bread is most excellent and always the same. Second—The kneading is done in three minutes, and there is but little strength required to turn the handle. Third—It works equally well with but one quart, as with eight quarts, of flour. A trial invariably proves its excellence.

NEW SAD IRON RACK.

W. H. Glenny & Co., Rochester, N.Y., have put on the market the new sad iron rack which is illustrated herewith. It is 6 x 14 inches in size, and retails for 25c., allowing of a good display of irons in stores and also proving a ready seller. It is made from very heavy galvanized sheet steel, with three pockets of sizes in proportion to the three sizes of the standard sad iron.

Glenny's Sad Iron Rack.

A huge ten-story warehouse is to be erected in Winnipeg by a company of English capitalists. Darling & Pearson, Toronto, will be the architects. The plans call for a building of about 115 x 250 feet, and from ten to fifteen stories high, the building being fireproof throughout.

Our "Famous" Oil Heater is a proved success, and you will have no dissatisfied customers with it.

Burns with a clear white flame.

Throws out an intense heat at a cost of about one cent per hour. Makes no odor whatever.

Can be carried from room to room, and is so simple that a child can operate it.

Cold air is drawn from off the floor and discharged, thoroughly heated, from top of heater.

Has seamless copper tank which never leaks. We can ship promptly. Advertising matter free.

SANITATION IN MUSKOKA.

LAST week the Provincial Board of Health returned from an inspection of the hotels and private residences in the Muskoka Lakes District, over six hundred buildings being inspected during the trip, about one hundred of these already having installed septic tanks. These were found to be giving excellent satisfaction, but in other places some very dangerous sanitary systems were found, and the owners were ordered to install septic tanks if they desired to occupy the same premises next season. It is altogether likely that over one hundred new tanks will be installed during the coming Winter and Spring, a work large enough to keep a fair number of plumbers busy for several months.

The Board of Health is doing a valuable work in enforcing proper sanitary regulations in Muskoka, the great danger to those who annually seek health and recreation in the cottages and camps on the numberless islands in Muskoka being the defilement of the water supply. General safety depends upon the enforcement of a rule that all garbage and wastes be destroyed by fire or distributed on or under the surface of the ground where it cannot pollute the sources of water supply. Public opinion will endorse the board in preventing slops and drainage from emptying or being thrown into the water. The soil is known to eat up impurities, but as pure water is one of the chief necessities of man—in health resorts particularly—it is dangerous to speculate on the probable presence in the water of agencies capable of destroying the impurities.

Not only is there need for inspection and action by the board in Muskoka, but also in the farming districts and the smaller towns the evils of bad sanitation are evident. Residents in rural communities are beginning to recognize this fact, and modern plumbing is being installed in numerous farm houses and village residences. The energetic work of the board is encouraging this movement, and the result is the establishment of plumbing shops in the smaller towns and an increased business for the manufacturers and supply houses. The Board of Health has the active support of the plumbing and hardware trades in the public work they are engaged in.

THE BANE OF TRADE.

IF you were to ask a number of the most progressive hardware merchants in the country their opinion of the evils existing in the trade, it is almost a certainty that nine out of ten would reply that the worst feature of the entire hardware business is the credit system. More particularly is this the case in districts where the dealers are compelled to depend to a large extent on the farmers' trade. And perhaps the hardware merchants are more peculiarly affected by this condition than those of any other trade, owing to their important dealings with the farming community.

How then is this evil to be dealt with? Is it possible for a country merchant to eradicate the credit abuse altogether? These are questions fraught with the greatest interests of the retail trade, and they must be approached very thoughtfully and very cautiously.

In the first place, the writer is of the opinion that it would be impossible for the dealer in a country town to altogether abolish the giving of credit, but by the exercise of prudence and tact — two qualities which are essential to the successful business man—he can at least adjust some of the difficulties that have been puzzling him. Moreover, in order to secure the best results, he will need all the determination he can muster, and he must not expect to see an immediate improvement in his affairs. Indeed, in some cases it may take two or even three years to accomplish his purpose. That will depend upon the man as well as his surroundings.

Perhaps you would like to turn to strictly cash selling. If so, you must be prepared to practically rebuild your business. Your constituency will be an almost entirely new one. You must appeal to a very different class of customers. Are you prepared to do this, to make such radical changes in your methods?

Again, you may decide to follow, regardless of consequences, some definite policy on credits, hereafter, and if you prove to be as good as your word, it is more than probable that you will lose some of your customers, and your business will need considerable re-shaping before you get back the trade you have lost.

But there is, nevertheless, a feasible plan, and one which has been found successful in many cases. You must decide that you will collect your money earlier in the fall than you have been doing, and follow that plan persistently. When the crops have been harvested and the wheat exchanged for coin of the realm don't let your friends, the butcher, the baker, and the candlestick-maker, get in ahead of you, but wake up and act at once. Furthermore, when your country customers come to you for credit next spring be firm and courageous enough to tell them, with all possible tact, that you are expecting settlements on such and such a day in the fall. Then they will not be surprised when you call upon them to square their accounts, before they have had time to get rid of their year's earnings.

If you will but follow this policy with patience for a few years you will be surprised at the additional respect you will command among your customers, and the additional respect they will feel for themselves. And you will perhaps notice, first of all, that you are being more respected by the wholesale trade. The jobbers have a not unnatural affection for the man who always takes his discounts, and this will be manifested in occasional "snaps" they will give you on odd lines, which will help you to draw trade.

Is this a pleasant picture? Would you like to enjoy the privileges of a cash buyer? Then show that you have determination and persistence, and that you can be tactful in your dealings with customers. Try our plan and see if it will not help you to put down the bane of trade.

PROVINCIAL CONVENTION.

Notices are being sent out advising the members of the coming convention of the Provincial Association of Master Plumbers and Steam Fitters, which will be held in Toronto on Thursday, October 26th. The Executive Committee will meet on Wednesday evening. The date chosen is Thanksgiving Day, and as the railway rates are favorable there should be a full attendance. Meetings will be held in the Association rooms at 21 Richmond St. West.

WATER POWER DEVELOPMENT.

NO matter what may be the outcome of the investigation now being made by the Waterways Commission nor what be the ruling of the Whitney Government in the matter, as to power distribution and its cost, it cannot be gainsaid that the one important consideration as effecting the country at large rests in the matter of the cost of power to the consumer. We have an unalienable birthright in the matter of our water power and no private corporation or political bias should be allowed in any way to act detrimentally to the country's best interests in the matter. Everything points to Canada's industrial supremacy through her advantages in limitless water power. A critical time has been reached in water power development in Canada, particularly as concerns Ontario, from the work that has gone on at Niagara Falls. Millions of money have already been expended and more millions of cash outlay will be required before any appreciable revenue can come to the companies who have shown their faith in the country and in the future of electrical distribution while placing such enormous capital and they should—and there is every reason to believe they will—receive an adequate return for their investment. But as relating to the country's future, it is imperative that the cost per electrical horse power per year be figured to the lowest possible basis. It is strongly advisable that all the water power development on the Canadian side be used in Canadian industries. It is said that sufficient demand does not exist in Canada to serve as a suitable market for the enormous power being developed. Let the companies supply that power at a rate which they well can and still have a fair profit, and the market will arise. Nothing could be more certain.

If the power companies attempt to charge what it is rumored they propose doing in Toronto, and it is to be surmised charges on a like basis within lesser or greater radius of the source of power, it will mean the death knell to electrical power and the hindering and holding back of a wave of industrial activity that fostered at this time would mean everything to future manufacture.

There is another point in connection with the power development problem, and that is its effect on the future of electric traction and hence on transportation. Sufficient advance has been made within the last two years in alternating current motors for electric railway service to place their utility and future position beyond the shadow of a doubt. It is also known that for short distances and numerous runs, the cost of electric transportation is greatly below that of steam. Thus we have a bright outlook regarding cheap transportation, which is an all-important factor to manufacturers and should mean more than would appear at a glance to the manufacturing interests of Western Ontario. Already numerous electric lines operate successfully from town to town, but this is only a beginning and the future will see not only passenger traffic, but heavy freight haulage as well handled by the responsive and powerful electric cars.

Regarding the cost of water power and the saving to manufacturers in Canada from the adoption of electric power industries, Hon. Adam Beck asserts that at present the consumers of the 120,000 H.P., expressly reserved for Canadian users, are using steam, for which they pay not less than $4,000,000 to $5,000,000 per annum, and when the time comes that the steam users of the Province consume 475,000 H.P., which will be available from Niagara, they would pay for that quantity of power generated by steam and coal, not less than from $16,000,000 to $17,000,000 per annum. Mr. Beck believes that within a radius of 200 miles of Niagara Falls power should be delivered at the rate of $15 per continuous horse power per annum for the 120,000 H.P., and when there is a demand for the 475,000 H.P. it should be available at $12 per H.P. year. This would mean a saving to the users of coal of $3,000,000 in the former case and not less than $11,000,000 in the latter. This enormous saving would have its effect in cheapening production, or making possible the payment of higher wages. At all events, the amount is such that all effort towards the saving of the same should be made by the manufacturing interests of the country.

SEASONABLE SUGGESTIONS.

In storing left-over Summer goods care should be taken to guard against rust.

* * *

Dealers who make a specialty of sporting goods should display footballs, fire arms, ammunition, camping outfits, and other similar goods in their windows.

* * *

The few days of cool weather we have had have started the sale of lanterns, coal scuttles, ash sifters and other winter goods. Dealers who haven't stocked up should do so now.

BUSINESS AND SPORTS.

ON another page is given a record of the games played by the Toronto Master Plumbers and Steamfitters Baseball Team during the past season, the record being published not only for its value as a news item but also because it draws attention to one of the most important and valuable features in connection with the organization of Master Plumbers' Associations.

Too often men of one calling who gather together at business meetings of an association find the strain of competition affecting their relations. One hot word leads to another until a critical situation exists and the organization is in danger of disruption. Where intelligent men meet and discuss business matters there is bound to be controversy as all men are not so constituted as to think alike. The difficulty is to bring about a fraternal feeling of give and take, where arguments can be weighed without being biased by the recollection that the speaker is a competitor for business.

The good fellowship resulting from association with business competitors at picnics and banquets is the force required to overcome the differences spoken of. When men get away from business on a Saturday afternoon to watch a ball game, or go out to some resort for a day's picnic, they are likely to forget their business troubles and by getting together in groups participating in or watching the various sports acquaintanceships become more intimate and a spirit of comradeship is engendered which is not soon forgotten. The experience in Toronto is that the periodical good times conducted under the auspices of the Master Plumbers' Association have been the means of cementing together in bonds of friendship the supply men, the journeymen and the members of the association. So strong is this feeling that despite what differences may arise in business affairs, there is no danger of the various organizations getting very far apart. If one body, through any cause, became disorganized a new association would spring into existence immediately.

The ball and hockey teams of the wholesale houses do an equally valuable work and the time given for recreation on Saturday afternoons by jobbing houses is not lost. By learning to work together on the ball field the employes learn to work together when at work. Supply houses and retailers alike can profit by encouraging the growth of a fraternal feeling between their employes and their competitors. There is a distinct connection between business and sport.

THE CENTRAL CANADA EXHIBITION AT OTTAWA

THE eighteenth year of the Ottawa Central Canada Fair has been concluded and the Exhibition had prosperity unfolded to it in every way. The weather was fine and the best days of the Fair were perfect Autumn specials—clear and cool, and just enough of the radiant September air in them to stimulate everyone. The Fair again accentuated the growth of the manufacturing and commercial interests of the Dominion, and especially did it illustrate the importance of Canada's capital as a centre of activity growing in importance from year to year.

Ottawans are justly proud of their exposition. They are, to begin with, proud of their city as a political centre, and there is, in addition, a tone about Ottawa that is peculiarly its own. For instance, there are the traditions of Confederation, the distinct atmosphere of Federal politics, the life of a capital—like Washington—a little world within itself; in fact Ottawa has fashion and memories entirely its own. All these elements combine to give the place a tone, and all this is more or less interlaced with the Exposition.

The beauty of the city is remarkable, with the Parliament buildings and the magnificent Chaudiere Falls, all with their incidental attractions, shaded by the development of man-made accessories.

When it is remembered that on the best Fair day 45,000 people passed the turnstiles, a small city in itself as far as numbers are concerned, Ottawa and its Fair may be said to be hand in hand in their drawing powers.

Never has Ottawa seen a better Fair, and never have the results vindicated it so strongly by the sheckels in the exchequer. Secretary McMahon and all the officials are again worthy of congratulation, for the different departments were most creditably managed.

Shurly & Dietrich Fine Saws.

Admirably placed at the right hand side of the main entrance was the exhibit of saws of all descriptions made by the well-known Canadian manufacturers, Shurly & Dietrich of Galt. This firm need no introduction to the public for their saws are a credit to the country and to the firm who make them. The display was similar exactly to the one which won the gold medal and high honors at the World's Fair and to describe it would require much space. It took the form of a handsome cabinet or arch pillared on each side by massive bannister-like posts which gave the appearance of a vacant arch. Filling up the space in the face of the arch were saws of all sizes and kinds including the huge circular saws, the finest band saws for big saw mills and all the varieties known to mills and men. The smallest hand and meat saws were there also and all so beautifully shining and attractive that the visitor was simply amazed at every look. Mr. Persie G. Dietrich was in charge of the exhibit and most carefully attended to the explanation of the merits of the saws to all inquirers. The excellence of the quality of the saws needs no dilating upon here, for their long list of satisfied customers all over the Dominion is the living testimony of success.

The Gurney-Tilden Co.

Located in the east side of the Main Building was the fine stove exhibit of the Gurney-Tilden Co. of Hamilton. So fine was the arrangement of Souvenir heaters and ranges that a diploma for the finest stove display was awarded. The stoves with fine burnished silver and steel mounts were most attractively arranged and capable attendants under the direction of Mr. J. E. Bennet detailed the merits of these stoves. The Art Souvenir heater with the fire pot receptacle for coal moveable and its duplex grates was a strong drawing card and is one of the finest stoves on the market. The fire pot can be drawn out with ease and the fuel-saving advantages are manifold.

Then the range is the only one made which has a removable cast-iron reservoir without any bolts. This pleased hundreds of visitors and many orders for all lines were placed. All the products of this factory are not only durable and useful but are ornaments for any home. The "New Idea" furnaces have won favor all over the country and are winners.

At one end of the exhibit there was a fine assortment of builders' hardware, door knobs, latches, and fixtures, which lent a nice finishing touch to a display of great credit.

Copious literature and fine catalogues regarding the Souvenir stoves may be had on application. Mr. Bennet, who arranged the exhibit, was warmly congratulated.

Diamond Fire Extinguisher.

One of the many attractions of the Central Canada Fair was the famous Diamond Fire Extinguisher owned and controlled for the district of Ottawa by Mr. C. D. Graham, of Wilson Bros. & Co., Queen street.

This powder is very popular and the display was located in the Machinery Hall. There Mr. Graham made a specialty of explaining the merits of his goods. The powder is a dry powdered chemical (every grain of which is a powerful fire destroying quantity). The powder is nicely put up in handy decorated metal tubes, 22 inches long, 2 inches in diameter, with press cap cover, with a strong ring in the same, by which the tube is suspended from a nail or a hook driven in the wall.

Mr. Graham stated that the powder is guaranteed to keep in all climates, and positively will not deteriorate with time. Neither the powder nor the gas generated from it are in any way harmful to either flesh or fabric.

Mr. Graham made several tests before the grand stand at the Fair which were eye-openers to the masses assembled. Great applause greeted the prompt squelching of dangerous flames. These were convincing tests and many congratulations were extended.

The great value of the Diamond Extinguisher is that it is instantaneous; it can be handled by any person, young or old, without any mechanical aid, and the price of it is so reasonable that every man can have it.

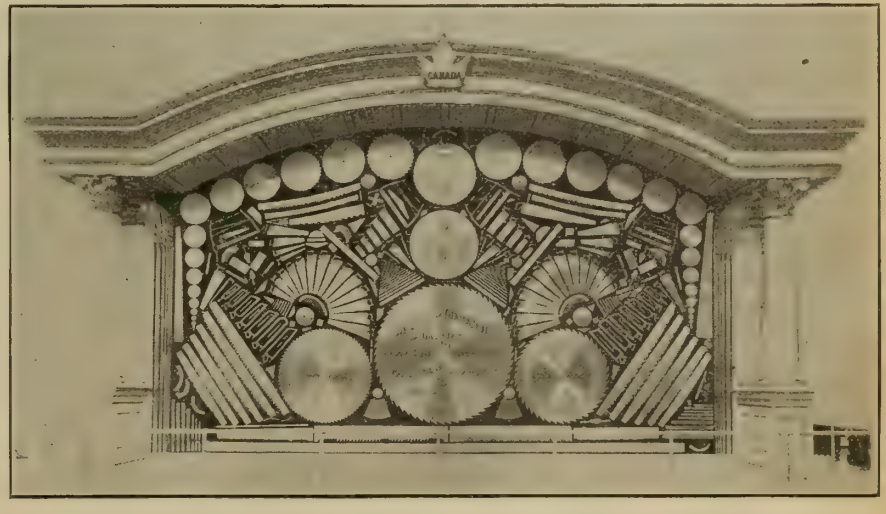

Exhibit of Saws made by Shurly & Dietrich, Galt, at the Central Canada Exhibition, Ottawa.

Intercolonial Railway

The exhibit of the Intercolonial Railway occupied over a thousand square feet of wall space at the east of the main building. Among the large photographs which have won the admiration

of thousands of people since they were installed were pictures of hunting and fishing scenes at Murray Bay, Bic the Beautiful, Cacouna and Matapedia Valley. There was also a handsome photograph of Canada's train, the Maritime Express. This train runs daily except Saturday between Montreal, St. John, Halifax, and the Sydneys. Too much cannot be said about the excellence of the sleeping and dining car service along this route. The stream of tourist traffic is increasing rapidly and patrons of the Government railway are always accommodated in the most excellent fashion. People who love to hunt are able to find abundance of moose, caribou and deer, while the streams abound in salmon and trout. These valuable resources of the hunting arena were represented by a tastefully arranged gallery of pictures. The large black bear and cub was one of the strong attractions of the Intercolonial exhibit. The exhibition goods were in charge of Mr. A. E. Barton, of Moncton, who was appointed nearly ten years ago. He distributed plenty of literature about the fishing, hunting and Summer resorts of the territory served by the Government railway. Lately the I.C.R. has been gaining greatly in popularity. Its passenger and freight service has been wonderfully improved and its trade noticeably increasing. It is one of the best of the roads to the sea and passes through a country where the scenery is unsurpassed. Every mile reveals to the passenger new scenic beauties and a journey over this popular road in its comfortable coaches cannot but be a source of pleasure and delight.

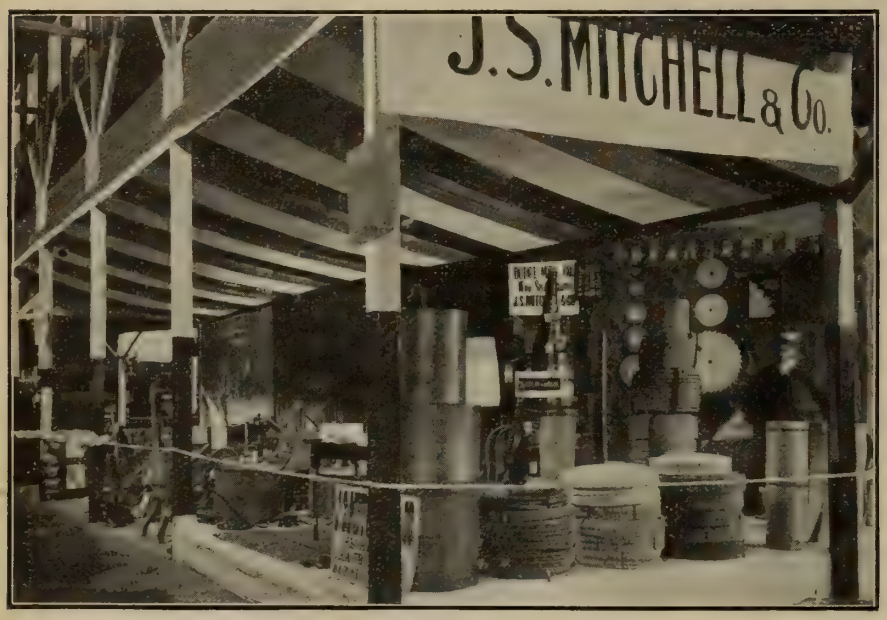

Exhibit of J. S. Mitchell & Co., at the Sherbrooke Exhibition.

The stove exhibits were the finest ever seen in Ottawa. The Moffatt Stove Company had a fine display near the front door and the Enterprise Company of the Maritime Provinces represented by the Ottawa Hardware Company also were well equipped.

J. H. Connor & Son had a fine display of washing machines and they particularly dwelt upon one that is entirely new and will be brought before the public shortly.

Caverhill, Learmont & Co.'s sample room at 104 Sparks street was well patronized by the visiting merchants of the Ottawa Valley, where they found a full line of shelf hardware. The sample room was in charge of Mr. John H. Meikle, ably assisted by Mr. J. Richard Terrill of Montreal. Mr. Meikle also had Mr. W. B. Leslie and Mr. J. R. Mackay assisting him. They report a full measure of business though generally speaking buyers do not attend exhibitions with their want lists in their pockets.

CANADA'S GREAT EASTERN EXHIBITION

NOTWITHSTANDING four days of rainy, unsettled weather, Canada's 21st annual Great Eastern Exhibition at Sherbrooke, Que., Sept. 2 to 9, was more than a qualified success from every point of view. A splendid array of exhibits in all departments did credit to the progressiveness of the Eastern Townships and practically assured a successful Fair. The following were some of the notable exhibits :

J. S. Mitchell & Co.

This well-known and popular Sherbrooke wholesale and retail hardware firm occupied an extensive space in a prominent position in the Main Building and surpassed splendid former efforts in a range of exhibits which proved of untold interest to many visitors. Really three large booths were well utilized to show plumbing goods, blacksmiths' supplies, and mechanical lines in manifold details. It is difficult to judge which proved more attractive, as the arrangement was all that could be desired, and established this display as one of the most interesting in the building.

The display included plumbing fixtures, mining and mill supplies, showing a special range of mechanical rubber goods, various beltings, among which was a 40-inch oak tanned leather belt valued at $1,250, valves, fittings, steam specialties, blacksmiths' supplies and tools in an endless range, Buffalo blowers, Buffalo combined punch and shears, drills, etc., etc. They also had an interesting exhibit of guns, rifles and kindred lines. Building materials did not lack representation either. There was no confusion in the multitudinous array and the divisions were such as to raise each department to the dignity of a separate show. They reflected credit upon the care and attention to details. The illustration is self-explanatory, although the plumbing supplies are not clearly shown.

A good deal of credit must be given to Mr. Geo. W. Murphy, one of their popular Eastern Townships representatives, in charge of the exhibit, for his courteous attention to all interested. He welcomed many business friends and his order book was often in request. This exhibit but further established this firm as a leader in the Eastern Townships and district, which territory they so well serve. The continuous growth during thirty years of existence presages an enlarged field of activity. They represent the pick of domestic and foreign manufacturers for the eastern ground.

During the week their establishment on Wellington street and their large warehouses were thrown open to visitors.

"Fenix" Cream Separator.

Among the exhibits in the Main Building of interest to the hardware trade was that of the Fenix Cream Separator by J. de L. Tache, St. Hyacinthe, Que., who is sole agent for Canada for this line. Two styles in many sizes were shown and the operation was interesting in the extreme. Quality is maintained but price is within the reach of all. These separators are built on common sense lines. Prices start at $15 for their H.S. of 90 lbs. capacity, suitable for owners of one to three cows. Size K1, skimming capacity 155 lbs per hour, is shown at $30, and the various prices range as high as $550 when for creamery use. Hardware stores having inquiries for these lines or desirous of securing an agency should communicate with Mr. Tache, Courrier building, St. Anne street, St. Hyacinthe, Que.

Notes.

Kerr & Foss, Sherbrooke, had a thorough exhibit of stoves manufactured by the Moffatt Stove Co., Weston, Ont. A full line was shown and Mr. S. G. White of Montreal, assisted by Mr. Kerr, made many new friends by their courteous, careful attention.

* * *

The Dunlop Tire Co., Toronto, showed every utensil of their large range, in good style. Mr. F. I. Fox, Montreal, was in charge.

* * *

The William Buck Stove Co., Brantford and Montreal, showed a representative array of the "Happy Thought" Range and many others of their manufasture. Mr. J. H. Hanson, Montreal, proved a capable and energetic manager.

* * *

The many exhibitors of cream separators criticized hardware dealers for their lack of co-operation in pushing their sale, thereby losing a generous source of profit.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 29, 1905.

VERY little change in market conditions has been shown during the past week, and the only change in price to note is that of bar iron, which has advanced five cents. The city trade is not nearly so lively as that from the country and, as usual, the real Fall business will scarcely open up till October. Next week is expected to show much greater activity so far as the city trade is concerned.

All staple lines are maintaining their prices very steadily; and it is noticed that business in the country districts is much brisker now that the Fall fairs are over.

Local jobbers report that horse blankets are now the goods most in demand. Large orders are being received and shipped daily.

Axes—A good turnover is manifest in the business which is being done by all the wholesale houses. We quote: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—We quote as follows: Axe handles No. 3, $1.25; No. [illegible] No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—There is no feature in this trade, which, however, is first-class. We quote as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Fall shipments are going forward with great regularity. Trade seems to have picked up well. We quote: Cold blast, $4.50; No. 0 Safety, $5.50.

Rivets and Burrs—In company with all hardware staples these lines are moving steadily. Our quotations are: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—We quote: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—Trade is featureless, but quite as active as usual. Our quotations are: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails — Very little strength is shown on this market, and the price remains $2.20 per keg, f.o.b. Montreal.

Horseshoes—This is one of the best selling lines at present, and the following prices are firm. P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—This continues to be one of the features of the market, ammunition being especially in demand.

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Bar iron has stiffened, and is now quoted five cents higher. Pig lead shows an advance of five cents per hundred pounds. Some grades of pig iron are quoted higher this week.

In merchant steel, sleigh shoes have advanced to $1.94½, and machinery iron finish to $2.07½.

Antimony has declined one cent, being quoted at 15c.

Ingot zinc is stronger, showing quotations at 6¼c. to 7c.

Sheet zinc has also advanced to 7½c. in cask lots.

Linseed oil shows a falling off of two cents.

TORONTO.

Bar iron has advanced $1 per ton.

Galvanized sheets are quoted fifteen cents higher.

Tin is stiffening in price, and higher prices are likely.

In old materials advances have been made in tea lead and old rubbers.

Bolts and nuts have advanced 5 per cent. in the United States, and a rise is looked for here.

Turpentine is stiffening, and most dealers have advanced prices from one to three cents.

Linseed oil has had a decided drop, quotations being five cents lower.

Our prices are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Trade is picking up fairly well. Building operations seem to be pretty well distributed all over the country, though, of course, the new districts are taking larger quantities of building paper than any other. Quotations are as given in the back of this issue.

Cordage—A good demand is reported for all lines. Prices are unchanged.

Cement and Firebrick—This is the quiet season and orders of good size are few and far between. We quote: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—The usual demand is shown at this time of year. The following are our quotations: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—This has been the poorest season in many years. Our prices are: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—As the season advances the demand for these goods is increasing rapidly. Prices vary from 25c. to $2.50, according to quality.

Sleigh Bells—This is among the best lines just now; shipments going forward every day. We give prices: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—This is possibly the feature of the market at the present time. Orders are in good volume and show a splendid demand for the better lines. Our quotations: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—With the advance of the season inquiries are more frequent. Prices range from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 29, 1905.

BOLTS and nuts have advanced five per cent. in the United States, and indications point to a similar movement on this side. It is certain that a corner has been turned and the specifications made by producers indicate a rise shortly.

General business continues very satisfactory, and after the first of the month a rush is looked for. Winter goods are in more active demand, and orders for cutlery, especially case goods and plated ware, are very large. Sporting goods and builders' supplies are the other features of the trade at present.

Sporting Goods—Rifles and shotguns

are selling well and ammunition is moving actively despite the difficulty in securing imported shells there is no scarcity.

Washing Machines—This line is moving more freely.

Chain—Fall trade is beginning to pick up. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders— Step ladders are in strong demand and a large business is looked for next month. We quote as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—A fair business is being done, but not so large as a month ago.

Wire Nails—Trade is very large, but stocks are ample for all demands. Prices are the same.

Cut Nails—There is a very satisfactory trade being done. Quotations are: $2.40 per keg f.o.b. Toronto.

Horseshoes—Good business is being done and a large Fall trade is looked for. Our quotations are: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Axes—Trade is good, but next month will see more activity.

Cutlery—Trade is increasing and case goods particularly are in demand.

Skates and Sleigh Bells—Large orders are booked for future shipment, an increased trade being indicated by the orders in hand.

Lanterns—Many good sized orders are being received for early shipment.

Apple Parers—Trade in this line continues active.

Horse Nails—Trade is active at unchanged prices.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts— An increase is looked for by some on account of the advancing prices for iron and the upward jump on bolts and nuts in the States. Mills have plenty of business.

Cordage—Sorting orders are coming in. Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Our quotations continue as follows: Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—A scarcity exists owing to the heavy demands of the past season, and prices are very firm in consequence. We quote: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—Demand is expected to pick up during the coming month. Prices continue unchanged. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A good business has been done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—The market in these lines continues in a steady position, and is showing a much more healthy front. Present prices are ruling firm, and as the demand is keeping well balanced with the supply coming to hand, no immediate change is contemplated. We quote.

Hides, inspected, No. 1 per lb.	0 12	
" " " 2 "	0 11	
Country hides. flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected	0 14

" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 29, 1905.

PERHAPS the most active week in several months is that which has just passed. Metals of all kinds have been booming and higher prices in many lines are the result.

Tin, after its recent weakness, is again showing strength, and it is expected that prices will go higher in the immediate future. The late weakness of tin is almost inexplicable, as there was no over supply and no cessation in demand. The anxiety of the holders to sell cannot be explained on ordinary grounds.

Copper sagged somewhat in the early part of the week, but has recovered and is now firming up again.

The pig iron market is particularly strong and Scotch pig is almost impossible to get. There is a heavy demand in the Old Country, and as the Canadian buyers also show activity it has been found necessary to advance the prices on some of the Old Country lines. The strength of the market may be judged from the fact that several orders ranging from 500 to 1,000 tons have been booked on import pig iron during the past ten days.

Antimony has gone off another cent and is not so scarce as it was a few weeks ago. But it is still considered too high in price and buyers are merely placing hand-to-mouth orders.

There is also a good demand for bar iron, which has shown an advance of five cents during the week.

Zinc is exceptionally strong, and we are quoting advances in spelter, sheet zinc, and zinc oxide. These are all very firm, and further advances are to be expected.

A great boom is reported in Canada plates and there will likely be an early advance in the galvanized plates, which are being extensively used by firms manufacturing metal roofings.

Canada Plates—The strength of this market is remarkable; demand for galvanized being especially so. We quote: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—A slight weakness occurred early in the week, but the market has well recovered and is firm at our last week's prices. We give quotations: Ingot copper, 17 1-2c.; sheet copper, 24 3-4c.

Ingot Tin—Firmer conditions now prevail and a complete recovery has been effected from the recent depression. This is in accordance with our last week's prediction, and we quote the following prices as being very strong: 35 1-2c. to 36c. per lb.

Pig Lead—We have to again report a boom in pig lead which comes as quite a surprise to the trade, as it was expected that the signing of peace between Russia and Japan would send prices down. We now quote: $3.75 to $3.85 per hundred pounds, and as importers are now being asked ten cents more per hundred pounds than formerly it will be seen that these prices will be maintained.

Boiler Tubes—Our quotations are as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—This has been a big week in pig iron. The scarcity of Scotch pig due to the heavy demand across the ocean has compelled dealers to raise the price on certain lines. We quote:

"Disc," No. 1	$16.50	delivered Montreal.	
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered Montreal.	
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	20.00	"	"
" (special)	18.50	"	"
Ayresome No. 1	18.75	"	"
" No. 3	17.75	"	"
Summerlee	18.75 to 19.25	"	"
Clarence No. 1	18.50	"	"
" No. 3	17.25	"	"
No. 1, Cleveland	17.50	"	"

Tool Steel—We give prices: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—We are showing an advance in both sleigh shoe and machinery iron finish, and there is every likelihood of a new price being held steady. We quote: Sleigh shoes, $1.94 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.07 1-2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—Our quotations are: Cold rolled shafting, 3-4

inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Two advances have been made in the U. S. during the past week, and Canadian dealers are likely to follow suit. No change, however, has yet been made in our last week's prices, which are as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—Owing to the strength of the whole metal markets black sheets are considered cheap at the ruling prices and an advance is imminent. We quote: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—Another falling off of one cent. per pound has taken place, but the price is still too high to encourage buying. We are now quoting 15c. per pound.

Tin Plates—Importers are now paying more than they did last week, but jobbers have not yet advanced their prices, which are as follows: Cakes, $3.75; charcoal, $4.

Ingot Zinc—This is another metal which has advanced and is showing phenomenal strength at the present time. We are quoting 6 3-4c. to 7c.

Sheet Zinc—The price has advanced and is likely to go higher, but the demand is rather quiet. We quote: No. 8 and No. 9, cask lots, 7 1-2c.; less than cask lots, 7 3-4c.

Bar Iron—Mills report a brisk demand, and have made an advance in their prices of five cents. Present quotations are: $1.82 1-2 base, f.o.b. Montreal.

Scrap Metal—Quotations are the same as last week, but indications are that the undoubted firmness of the market will create higher prices in some lines. Rubber is scarce and another advance may soon occur. We quote as follows: Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed scrap, 75c. to 90c. per 100 lbs.; old rubbers, 6c. to 6 1-4c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street east,
Toronto, September 29, 1905.

NEARLY every metal listed shows a stronger condition than existed a week ago, and higher prices are the rule on most lines. Antimony is almost alone in remaining unchanged, but the scarcity on the local market has prevented its weakening.

General business is good, and the rapidly advancing prices in Great Britain have caused the pessimism existing amongst the trade there to be replaced

WANTED.

WANTED by young man with thorough knowledge of the hardware business, position as travelling salesman, best of references given. Address Box F, HARDWARE AND METAL, Montreal. [38]

ENGINE LATHE WANTED.

SECOND-HAND engine lathe, 24-inch swing by 10, 12 or 14 foot bed ; state make. Full particulars and best prices to Box 4, Ohawa. [39]

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list ; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. [tf]

TENDERS will be received by the undersigned executors of the late James M. Martin for the purchase of the good-will and stock in trade of the hardware business of the firm of Martin Bros., of the city of Rossland. An inventory may be seen and particulars obtained from the executors.

Wm. Martin,
W. M. Wood,
Executors. [39]

FOR SALE.

FOR SALE—A good set of tinsmith's tools cheap. J. E. Pedlow, Vienna, Ont. [38]

A FIRST-CLASS set of tinners' and pipe fitters' tools for sale. Several of tools are just new and hardly used. W. T. McGibbon & Co., Brighton, Ontario. [39]

A FIRST-CLASS foundry in good running order, equipped with cranes and overhead trolley, machine shop and pattern house ; works are situated on two acres of land at New Toronto, just outside city limits, with splendid shipping facilities; modern plant in every respect. Address Pease Foundry Co., Limited, 191 Queen street east, Toronto. [38]

SITUATION WANTED.

BY cutlery man, with fourteen years' experience in the wholesale and retail cutlery business; could take charge of cutlery department in either wholesale or retail store ; Western Canada preferred ; references given. Box 275, HARDWARE AND METAL. [41]

WHOLESALE AGENTS WANTED.

ONE of the largest and oldest European manufacturers of Cream Separators and Dairy Machinery is desirous to arrange with one large and first-class firm for each of the Provinces in Canada for the sale of their goods. Send particulars and references to A. B. C., c/o HARDWARE AND METAL Toronto. [41]

AGENTS WANTED.

ADVERTISING novelties and calendars with merit are supplied by the Cranston Novelty Co., 167 Bay Street, Toronto; also rubber stamps, clothing hangers and store fixtures. Write for catalogue. Agents wanted. [39]

by a more confident feeling. Particularly in black and galvanized sheets are the advances made.

Bar iron has advanced five cents and the base is now at $1.90 on the local market. In old material higher prices are noted for tea lead and rubbers.

Whether the general advances made are speculative or are warranted by trade conditions is uncertain, but it is certain that the market is stronger this week than for some time past.

Coal will advance again on the first of the month.

Pig Iron—The market is very strong and some mills are out of the market completely. Quotations continue as follows :

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace		18 50
" No. 2, "		18 00
Midland, No. 1, "		18 50
" No. 2, "		18 00
Radnor, at furnace		21 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—An advance of 5c. is reported this week, the market being especially active. We quote as follows : $1.90 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—The market is active and demand very keen. Prices are looking upward.

Tin Plates—Demand is active with prices unchanged.

Galvanized Sheets — The demand is very strong. Prices have advanced 15c.

Brass — Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—General activity rules. Stocks are light, and many dealers short. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Higher prices are quoted on outside markets, the demand locally being very active. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—The market is quiet. Prices continue very firm. Our quotations are as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Conditions are improving and the market is more active, stocks being very light.

Old Material—Business is quite active and much iron is being sold to foundries. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.50 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $7.50 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 1-4c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Anthracite is meeting with an increased demand. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, September 28, 1905.

THE past week has carried further the remarkable buying movement that burst upon the iron market two weeks ago, and the September tonnage is easily the greatest for a single month in the history of the trade. While there are evidences of excitement here and there, business for the most part has been done in an orderly way, and veterans in the trade refer to the present market as the greatest in which they have participated.

The United States Steel Corporation has bought 40,000 tons of Bessemer iron at $15 at furnace for delivery in September and October. Further iron will be required for October and the corporation is expected to be a buyer of Bessemer at the rate of 40,000 tons a month well into next year. The total of its purchases in September is 80,000 tons. Bessemer iron is now squarely $15.50 at Valley furnace. In the foundry iron trade a prodigious business has been rounded up and leading Southern sellers have booked a record tonnage in September. The largest seller is reported to have taken orders for 100,000 tons last week. Northern sellers have been exceedingly busy also, particularly in the East and the Central West. The movement has given strong proof that foundries are at last getting a fair share in the general prosperity.

Three Alabama sellers of foundry iron are out of the market temporarily, but inquiries of large aggregate for the first quarter and first half of 1906 are pending and $12.50 for No. 2 foundry iron at Birmingham is now quoted. Eastern Pennsylvania furnaces now have their prices 50c to $1 a ton above those of two weeks ago. In the Central West the minimum has advanced from $14.50 to $15 at furnace for No. 2 foundry.

Eastern buyers of basic iron have taken 60,000 tons additional and the market is very firm at $16, delivered.

Coke manufacturers have advanced prices and are chary of long commitments. Contracts for Connellsville furnace coke have been made at $2.50 for the first half of 1906 and other contracts at $2.60 are pending. The possibilities of an anthracite strike and the pinch of car shortage are both influential factors in the coke situation, which is particularly strong.

Lake Superior ore interests are already discussing higher prices for next year and sales are expected before the close of 1905.

Sales of English hematite for Atlantic coast delivery in this country have been erroneously reported. In early September 30,000 tons were arranged for in addition to the purchases of last spring, and it is understood that a deal for 30,000 tons additional is pending, deliveries extending into next year. Prices on the other side have advanced to 58 shillings for East Coast hematite. Quite heavy buying of foreign Spiegeleisen and Ferromanganese for Pennsylvania steel makers in reported, 30,000 to 40,000 tons being taken in the past week. Ferro

has advanced $4 to $5 a ton in the past fortnight.

Rail buying and railroad equipment demand are still the backbone of finished material markets. Fully 125,000 tons of rails have been booked in the week, including 10,000 tons for the Central of Georgia, 8,000 tons for the Des Moines & Fort Dodge, 30,000 tons for the Northern Pacific, 40,000 tons for Rock Island, 10,000 tons for Central of New Jersey, and 25,000 tons, in addition to the earlier order, for Norfolk & Western. More rails than ever for the Southwest and Northwest will be rolled in Pennsylvania next year, the Chicago mill being filled up to November 1, 1906.

The stringency in structural material is more marked and Chicago jobbers are now shipping far afield, reaching both coasts. Plate mills are a close second to shape mills in the matter of congestion and an advance in the plate base is considered imminent.

It is only mildly stating the case to say that in important finished lines September sales have exceeded all records. Steel bar business is very heavy, the advances in bar iron now making steel the cheaper material. No advance in steel bars has been made nor do leading manufacturers expect an advance. Wrought pipe has been in excellent demand, albeit prices do not advance. Sheets have improved steadily. Tin plate lags, though some large business has been done with the Pacific coast canning trade. September has always been active in the wire trade and this month has emphasized the record.

Modern builders realize that this is the metallic age of architecture.

Dealers in fine Sheet Metal goods should be prepared to supply "Metallic" Cornices which we make in so many artistic and beautiful designs.

"Metallic" Cornices portray in rigid fireproof metal any art conception possible in wood, avoiding its combustibility, outwearing wood by many years and reducing insurance charges.

While the metal, the workmanship and the art quality of our Cornice work is superior to anything made, its cost is comparatively low.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

LONDON METAL MARKETS.

From Metal Market Report, September 27, 1905.

Pig Iron — Middleboro No. 3 foundry is quoted at 49s. 9d, and Glasgow standard foundry at 48s. 4d, making prices as compared with last week 1s. 6d higher for Middleboro and 1s. 7d higher for Glasgow foundry.

Tin—Spot tin opened firm at £147, futures at £145 12s. 6d, and after sales of 50 tons of spot and 200 tons of futures closed quiet at £147 for spot and £145 12s. 6d for futures, making price as compared with last week £1 higher on spot and 7s. 6d higher on futures.

Copper—Spot copper opened firm at £70 17s 6d, futures £70, and after sales of 200 tons of spot and 700 tons of futures closed firm at £71 for spot and £70 for futures, making price as compared with last week £1 15s. higher on spot and 15s. higher on futures.

Lead—The market closed at £14 2s. 6d, making price as compared with last week 7s. 6d higher.

Spelter—The market closed at £27 5s., making price as compared with last week 15s. higher.

Nova Scotia Trade News

Halifax, N.S., Sept. 27.

THE hardware trade is looking up a little, but it is far below what it should be for this season of the year. Orders from outside points are coming in very slowly, and the orders to hand are only small. Outside of good sales of guns and ammunition, all other lines remain inactive, and prices are unchanged.

The lumbermen have not yet commenced to order their goods. Several firms have been asked for quotations on certain lines, but so far no orders have been placed. The lumbermen say that they have lots of logs in the rivers but cannot get them down to saw, owing to the scarcity of water. This is quite a serious drawback, especially at this season of the year.

The mines throughout the Province are unusually quiet and they are not ordering any supplies. Some dealers express the hope that trade will improve about the first week in October. Jobbers are not yet booking their orders. The price of wire nails seems to be the drawback in this respect.

Wire nails are quoted in St. John at $2 f.o.b., and in Halifax at $2.10 f.o.b. Dealers here are offering them at $2.15, and say that it is impossible for them to put the price any lower. One dealer in referring to wire nails said the price was practically open. On the price of nails depends very largely the orders for other goods.

One of the most attractive features of the Nova Scotia Exhibition just closed was the mineral exhibit, to which an entire building was devoted. The majority of the exhibits were contributed by Cape Breton industries—the Dominion Coal Co., the Dominion Iron & Steel Co., the Nova Scotia Steel & Coal Co., Dominion Tar & Chemical Co., and the Sydney Cement Co. This is the first year of this department, which will be made a permanent feature of the Halifax Fair, but it is probable that the premises will have to be enlarged, as there was evidence of overcrowding. The first credit of this exhibit is due to the Sydney Board of Trade, who were the originators of the idea of a permanent mineral exhibit.

Prices quoted here follow :

Lead pipe	$ 4 99
Sheet zinc, in casks	7¼c.
" " 5 sheets and over	7¾c.
Less	8c.
Pig lead, per lb	3¾ to 4c.
Bar iron, base	$ 2 00
Wire nails, base	2 10
Cordage	....
Manila, base	15c.
Manila, British	11½c.
Sisal, base	10½c.
White Lead (Brandram's)	
B.B. Genuine	7 25

" black	13 00
Lanterns, cold blast	5 00
Turpentine	94 to 96
Boiled oil	54
Raw oil	51

MINES AND METALS

Ore from a quartz mine near Dawson and from the New Windy Arm district, is being brought down for treatment at the smelter at Ladysmith, B.C.

* * *

Deputations of persons interested in mining at Cobalt are urging changes in the Ontario mining regulations covering that district.

* * *

The Dominion Coal Co. and the Nova Scotia Steel & Coal Co. have increased their shipments to the St. Lawrence, during the past four years, in similar ratio. The increase for each is about 40 per cent. It is fortunate for Nova Scotia that the Montreal market is a continually expanding one. It took over a million and a half tons of Nova Scotia coal last year, and it will take considerably more this year.

As you know we are headquarters for

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 29, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

ROBERT MUNRO, of Montreal, managing director of the Canada Paint Co., was in Winnipeg last week completing arrangements for the transfer to his company of the linseed oil mills of this city. Mr. Munro stated to Hardware and Metal that a paint factory will be built in Winnipeg early next year in order to meet the growing western demand, and that in the meantime the oil mill will be conducted as usual. Arrangements were being made for the purchase of seed. Mr. Munro left Winnipeg for Montreal on the night of the 22nd inst.

* * *

The additional two storeys to the warehouse of Tilden, Gurney & Co., Limited, are now completed and a large striking sign has been painted on the east wall.

* * *

Wholesale trade continues very active, but there are few changes in price, an advance of 1c. per lb. in solder being the only quotable change.

* * *

Lanterns—Wholesale prices are steady in spite of some severe competition in the retail prices, and quotations are still as follows:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Prices are quoted as follows:

Barbed wire, 100 lb	$2 85
Plain galvanized 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	2 85
Staples	3 35
Oiled annealed wire 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Business is very active. Large orders are coming in from the east before the close of navigation. The price quoted is $2.75 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g. hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 co
" double bitts	12 00 to 18 co

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is very active at following unchanged prices:

Anchor, plain	55c.
" tarred	65c
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—Sorting orders are numerous since the opening of the hunting season. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
E.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder— The price has been advanced 1 cent per lb. Solder is selling now at 21 cents, with concessions for large quantities.

Iron and Steel— Prices are quoted as follows :

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge,	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¾ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price is now $7.75 for cask lots and $8.25 for less than cask lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote

Black iron pipe, ⅛ inch	
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 50
" 1¼ "	7 45
" 1½ "	8 95
" 2 "	12 30

Petroleum— The price is steady at the advance noted last week. We quote:

Silver Star, per gal	21c.
Sunlight "	22c.
Eocene "	24c.
Pennoline "	25c.
Crystal Spray "	24c.
Silver Light	22c.
Gasoline, 74 76	27c.

(In barrels f.o.b. Winnipeg.)

6 to 100 "	

CHANGE IN AGENCY.

Mr. G. S. Pelton, of Montreal, who for the past twenty-four years has represented the old established firm of John Shaw & Sons, Ltd., Wolverhampton, Eng., has resigned this branch of the business and will hereafter devote his entire time to cutlery and hardware specialties. Mr. J. Roper, who was formerly associated with John Shaw & Sons for nine years, has now been appointed their agent for Canada and will in future make the usual trips in their interests. Mr. Roper is well known to the trade and it is positive that the agency has been placed in good hands. He leaves soon for Wolverhampton to complete arrangements, and he expects to spend about a month in the Old Country.

British Columbia Trade News

Vancouver, B.C., Sept. 22, 1905.

AT yesterday's session of the Railway Commission, held in this city, a most interesting point with respect to a proposed revival of the mixed carload privilege was argued at length. The Canadian Manufacturers' Association, represented by John R. Marlow, manager of the Transportation Department, pressed the case for the restoration of the old Rule No. 2, governing such shipments. He claimed that it would tend to expansion of trade as it would enable western consumers to get goods at lower prices. Explaining the proposal he said it was not intended that half a dozen eastern merchants should be permitted to join hands in hiring a car to ship mixed carloads to Pacific Coast points. The privilege would only apply to individual shippers.

Mr. B. W. Greer, Assistant General Freight Agent, C.P.R., said that the application was intended to revive the old order whereby mixed shipments of hardware and groceries in one car were permitted. Several representative wholesalers put in strong objections, among them being Mr. C. A. Godson of the Robertson-Godson Co., who represented the wholesale hardware, metal and iron pipe people, Mr. W. H. Malkin, representing the wholesale grocers, Mr. H. T. Lockyer, representing the Trade and Commerce Committee of the Board of Trade. These gentlemen all strongly urged that the proposal would seriously affect the trade of Vancouver and Victoria wholesale houses and that it would give eastern wholesale houses and manufacturers an unfair advantage. It would also permit eastern dealers to ship direct to interior points, while Vancouver wholesalers would have to pay the local rate from the coast back to interior points. The arguments pro and con were very full and the commissioners reserved an opinion.

A point on which both the Canadian Manufacturers' Association and Vancouver Board of Trade agree is with reference to the demand that through rates from the east to the coast be equalized as between Canadian and United States transportation lines. Mr. H. McDowell presented the views of the Vancouver Board of Trade, referring to rates from Montreal to Vancouver as compared with New York to Seattle.

For the C.P.R. Freight Traffic Manager Greer argued that the lower rates on United States lines were due to competition via Cape Horn and Panama, and were not fairly comparable with the Canadian rates. Some criticism was made on the part of the commissioners of the dilatoriness of the C.P.R. in putting in their defence on this point, though they had been instructed to do so a year ago. Mr. Greer promised to get it in and also to hand the Canadian Manufacturers' Association and the Vancouver Board of Trade, parties to the application, copies of their defence in due time so that they could deal with it in reply.

The chairman of the Board of Commissioners asked for criticism of the car service rules submitted for approval, with respect to loading and unloading of cars. Superintendent Beasley and Car Service Agent Miller for the C. P. R. asked for some modifications, as in some cases unless cars were loaded rapidly the company would lose money. There was a shortage of cars on this division. Mr. R. Marpole pointed out that the idea of demurrage on cars not unloaded was not for revenue so much as to hurry up shippers to get the cars emptied. The matter was by arrangement left for private discussion and modification between the railway company and the business men of the coast cities, with the approval of the commissioners.

* * *

Northern freight shipments have dropped off practically for the season so far as Dawson is concerned, the bulk of the goods having gone forward a fortnight ago and before. At present advices indicate that the water in the Yukon is continuing to drop, indicating a close of navigation before very long. Most of the heavy goods for the winter supply have been got down river safely, very little being hung up at White Horse as was the experience last season.

* * *

An important lumber deal is announced whereby the mills and timber limits of Mr. W. C. Wells, a former member of the local Government and now a member of the Legislature, have gone into the hands of the Dickason-Goodman Lumber Co., of Kansas City, Mo. The principal mills are located at Palliser on the main line of the C.P.R. some distance east of Golden. Mr. Wells has been in the Province since the C.P.R. ran its first train through the mountains, and in all that time he has conducted a successful lumber manufacturing business. He proposes to reside in Vancouver after he has closed up the details of the transfer.

* * *

Assignee J. F. Helliwell has made the disappointing report to the creditors of the N. Thompson Engineering Co. that no dividend to the creditors, preferred or common, will be forthcoming after satisfying the secured claims of the Molsons Bank, which were in shape of real and chattel mortgages and amounted to $45,053.30. In addition to this the bank at the request of the committee of creditors advanced a further sum to pay the first assignee and 50 per cent. of the wages claims, which totalled several thousands of dollars. Then bids for the property were called for and but one bid, that from the Molsons Bank, was received. It was for less than the amounts advanced, but the inspectors decided to accept it.

* * *

Shipbuilding develops satisfactorily in British Columbia. Recently it was announced that the British Columbia Marine Railway had been awarded a contract by the C.P.R. Co. to build a fine passenger steamer but little smaller in dimensions than the crack liner Princess Victoria, which was built in the Old Country. Now the keel of the new vessel has been laid at the Victoria yards of the contractors. She is to be of wood, of course, British Columbia shipbuilding not having got to the length of building such large steamers of steel. The new Princess will be 50 feet shorter than the Victoria, or 250 feet over all. She will have 40 feet breadth of beam, and 25.62 feet depth of hold, while her machinery, which will be built in Scotland, will be capable of developing 2,500 horsepower. Her upper works and cabin accommodation will resemble those of the handsomely fitted Princess Victoria and the vessel, which is designed to alternate with the former, will be ready for next year.

* * *

Shagway reports indicate that the freight piled up there awaiting transportation down the Yukon before the Winter sets in, is as great in bulk as that piled up at White Horse. The ocean steamers arriving from B.C. and Puget Sound ports tie up two deep awaiting room to discharge their cargoes and not only are the wharf warehouses filled, but there are great piles of goods on the open wharf. The White Pass & Yukon Railway Co. is working day and night rushing freight across to the Yukon, and river steamers are taking full cargoes and towing large barges as well, in the rush to get the stocks in before the freeze-up.

LAST MINUTE PAINT MARKETS

Office of
HARDWARE AND METAL
Montreal, Sept. 29, 1905.

The paint manufacturers are moving to increase the cost of mixed paints ten cents a gallon, to meet the increased cost of labor and raw material. It is understood that circulars are being issued to this effect by the manufacturers.

Turpentine is much firmer, and it is probable that an advance will be declared before this is in print.

NICKEL STEEL POPULAR.

In our special edition for Maritime Provinces when noting individual firms we referred to Estey & Co., St. John, N.B., as sellers of nipple steel. While they do sell steel which can be made into nipples and also sell pipe nipples, we should have said that they were sellers of nickel steel. This form of steel is now coming into use as being of great tensile strength for shafts, pistons, axles, etc., etc. They supply nickel steel in bars or finished to sketch as well as make castings. Their wheels for street car use are giving best mileage under hard conditions. This firm make a specialty of mill, railroad and foundry and mining supplies of all kinds.

LAWN MOWERS IN 1906.

Canadian manufacturers of lawn mowers have failed to come to any understanding on prices for the coming season. In an open market, which this really means, the jobbers will no doubt quote most interesting prices.

LIVED HAPPY EVER AFTER.

Mr. John Davidson, of the office staff of Caverhill, Learmont & Co., Montreal, was married on Wednesday, the 27th inst., to Miss Edna Gowdy, in St. Martin's Church. The happy couple left for Toronto, Niagara and other western points, to spend their honeymoon. Among the wedding gifts none will be more prized by Mr. and Mrs. Davidson than a fine cabinet of Community silverware presented by "the boys" in the office.

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., is adding a two-storey addition to the No. 2 mill at its power plant. This will mean an increase of 25,000 square feet of floor space.

PERSONAL MENTION

Quebec.

Mr. Baume, of Hawkesbury, paid a flying business visit to Montreal during the week.

A. G. Robb, of the Robb Engineering Co., Amherst, N.S., was in Montreal this week.

T. A. Cantlie, manager of the Nova Scotia Steel Co., was a visitor in Montreal this week.

Mr. Lefebvre, of Lefebvre & Lariviere, St. Hyacinthe, was a visitor in Montreal this week.

C. M. Robertson, of James Robertson Co., Limited, Montreal, has returned from his holidays.

D. McAllister, dealer in hardware, of Chute au Blondeau, visited Montreal jobbers during the week.

W. H. Nolan, proprietor of the Canada Machinery Agency, Montreal, has returned from a brief vacation.

Mr. Harcourt, representing the Canada Bobbin Factory, Walkerton, Ont., was in Montreal on business this week.

A. Limoges, tinsmith, of Beauharnois, was in Montreal this week, in connection with a big heating contract he has on hand.

J. J. Sophus, of McLean & Sophus, mechanical engineers and machinery agents, Montreal, is spending the week in Boston.

Madame Wm. Gravel, of Terrebonne, paid a visit to Montreal during the week on matters in connection with her husband's business.

Mr. Bradfield, of Bradfield Bros., hardware merchants, Morrisburg, Ont., was one of the out-of-town buyers in Montreal this week.

Messrs. Robert and Emile Mond, who have extensive nickel holdings in New Ontario, were in Montreal last Tuesday, registered at the Windsor.

S. Bourgeois, of S. Bourgeois & Cie., wholesale and retail hardware merchants, St. Hyacinthe, called on the Montreal trade during the week.

James Stevenson, of the Riordan Paper Mills, Hawkesbury, spent part of the week in Montreal, calling on the manufacturers and jobbers of building paper.

W. C. Butler, vice-president of the Simplex Car Co., New York, was at the Windsor, Montreal, for a few days this week, in connection with the company's new plant in that city.

T. W. Boyd & Son, Montreal, have taken the Canadian agency for ?guns made by J. P. Sauer & Son, Suhl, Germany. This firm has been in business since 1751, making a specialty of sporting shot guns.

Mr. John, who has just formed a partnership with Mr. Hubert, of Waterloo, Quebec, to enter into the hardware business there called on the Montreal wholesale houses, making preliminary arrangements.

Two clerks who have been in the employ of Watts & Mailhot, hardware merchants, Montreal, have been convicted of robbing their employers. The culprits were discovered by means of marked money which was traced to them.

Norman J. Dineen, now with the Hobbs Hardware Company, London, Ont., has accepted a position on the staff of Lewis Bros., Limited, Montreal, and will arrive early in October to assume the duties of assistant buyer.

Walter Pierce, of Parry Harbor, shook hands with some of his old friends in the Montreal trade this week. This was his first visit to the metropolis in twenty-five years, and he noticed many improvements. Mr. Pierce will return to his home via Toronto.

John Millen & Sons, who have been in the hardware business in Montreal for upwards of forty years, have decided to give their undivided attention to the sale of some special lines which they have been developing of late, and they are now advertising their hardware stock for sale. The special lines to be taken up include Shelby steel tubing, automobile and gas engine supplies and bicycle sundries.

Blanchard Fowler, of the firm Josiah Fowler & Son, St. John, N.B., axe and tool makers, was a caller at the Montreal office of Hardware and Metal this week. He had just returned from a trip to Toronto Exhibition and Western Ontario. Trade possibilities, he believes, are excellent. The Fowler firm are represented in Montreal by the Messrs. Canavan, two brothers who are hustling the local trade along in a most satisfactory manner.

S. S. Swazey, general manager of the Creamery Package Co., Limited, of Cowansville, Quebec, was in Montreal last week. Mr. Swazey stated that his company had been very busy this year, and that orders ahead were plentiful. Cheesemaking and factory work is going ahead apace all over the Dominion. He further stated that in the matter of trade development it was noticeable that the hardware men in different parts were handling the manufactured products of his firm.

Ontario.

Paul Chappelle, stove merchant, Brantford, visited Toronto this week.

Mr. Shurly, of Shurly & Dietrich, Galt, was a visitor in Toronto this week.

T. B. Lee, of Rice Lewis & Son, returned this week from a business trip to New York.

Mr. Thompson, hardware merchant, Elmvale, spent a few days in Toronto this week.

George Elliot, Jr., stove merchant, Brantford, has moved into a handsome new store.

Mr. Martindale, hardware merchant, Alliston, called on hardware jobbers in Toronto this week.

President Louden of the Louden Manufacturing Co., Guelph, has returned from a business trip to Winnipeg.

Mr. Woolley, representing John H. Graham & Co., manufacturers' agents, New York, visited Toronto this week.

Mr. H. B. Coleman, of the Russell-Erwin Company, New York, has been a visitor in Toronto during the past week.

Robt. Munro, of the Canada Paint Co., Montreal, passed through Toronto on Thursday on his return from a trip to Winnipeg.

A. McMichael, manager of the Toronto branch of the James Robertson Company, is spending a vacation at Mount Clemens, Mich.

A. E. Staefer, manager of the general sales department of the Sherwin-Williams Paint Co., Cleveland, was a visitor in Toronto during the last week.

Frank Alfred, chief engineer of the Pere Marquette Railway, has resigned to accept an important position with the Canadian White Lead Co. His headquarters will be in Montreal, to which city he will remove his family shortly.

Work on the foundation of R. J. Walkem's new hardware store at Tottenham has been commenced, and the work of construction will be pushed energetically.

J. M. Taylor, president of Taylor-Forbes Company, Guelph, passed through Toronto a few days ago on his return from the Manufacturers' Convention at Quebec.

Mr. Terry, representing Sargeant & Co., New York, one of the largest manufacturers of hardware specialties in the world, called on Toronto wholesalers this week.

T. S. Hobbs, London, of the Plymouth Binder Twine Co., Welland, was in Toronto on Friday. Several changes in the company's staff are being made. Mr. W. R. Hobbs, who has been manager of the Toronto branch of the Plymouth Company has resigned his position, and will probably devote his entire attention to the Consolidated Plate Glass Co., Toronto.

L. B. Graham, director of the firm of W. R. Humphries, cutlery manufacturers, Sheffield, Eng., visited Toronto and Hamilton during the past week. Mr. Graham had a very fine display of samples of all classes of cutlery and flat ware. He states that the popular selling lines both in England and Canada this season are the pearl handled fish and fruit knives and case goods of all kinds. One handsome line shown by him was a case of polished wood both inside and outside, no plush being used to decorate the interior of this case.

Western Canada.

Henry Wilcox, a plumber, of Calgary, committed suicide last week by taking a dose of strychnine.

W. F. Cockshutt, of the Cockshutt Plow Co., Brantford, is making a business trip through Manitoba and the Northwest.

W. C. Perry, assistant manager of Geo. D. Wood & Co., Winnipeg, is holidaying in the Dauphin country, a section where good shooting is always to be had.

The Canadian Fairbanks Co., Limited, Vancouver, B.C., have shipped a complete machine shop equipment consisting of power steam hammers, punch and shears, lathes, drill presses, and full equipment of small tools, to the Fiji Islands.

Jas. Simmons, proprietor of the Iron Rolling Mill, Dartmouth, N.S., is making a trip through Western Canada.

Maritime Provinces.

Robt. M. McGregor, M.P.P. for Pictou, N.S., and secretary of Munroe Wire Works, Limited, was married last week and is now making a tour of the Western States and Canada. On his return he will inspect the company's new plant at Winnipeg.

Charles A. Treen, of Sackville, N.B., has resigned his position as traveler for the Charles Fawcett Manufacturing Co., Sackville, to accept a position as assistant manager and general sales agent for the A. C. Thompson Co., North Sydney, N.S. Mr. Treen is one of the best known men in the stove and furnace business in the Maritime Provinces.

PAINT, OIL AND BRUSH TRADES

HIGHER PRICES FOR OIL.

THE advance in the price of oil in Canada will hardly as yet have an appreciable, to say nothing of a serious effect on the consumers, amounting as it does to only three or four cents a barrel, but it shows, says the Montreal Herald, how much one part of the world is dependent upon another when one sees trade conditions affected even to that extent by troubles in a region so remote as the Russian oil fields. The condition is governed, of course, by the Standard Oil Company, which is followed in the upward and downward movements by the smaller producers and the middlemen who compete with it, and that astutely managed concern may be trusted to operate the law of supply and demand so as to obtain the highest possible prices for the product.

The advance in refined oil for export is already attracting considerable attention as it is held to be the result of the removal of Russian competition and the opening of the field to the control of the American oil men. On the western shore of the Caspian Sea south of the great mountain range that separates Europe from Asia is an oil region which yields more crude petroleum than all the American fields. This Caspian Sea oil field whose product is of inferior quality to that of some districts on this continent and superior to others, divides the natural markets of the world with American oil. That is why the news that five thousand oil towers were burning in the Baku district sent up the price of Standard Oil stock. If the riots should rise to the magnitude of a revolt the oil situation will be still further unsettled for the large amount of property in the Caspian oil region already destroyed is likely to greatly reduce the production and this will assuredly mean that the oil will cost more here.

DON'T SELL POOR PAINTS.

IN the Western States there is a large amount of poor paint on the market and Government inspectors have been forced to take action to protect the public. Hardware dealers are interested in the fight and their interests certainly lie with the well-known manufacturers whose goods have become standard because of their excellence and the high quality of the ingredients used. A bulletin recently issued by the Dairy and Food Commissioner of Minnesota calls attention to the analysis of a sample of paint which was purchased with the understanding that it was of good quality, and for which a high price was paid. The chemist's report says: "Sample is composed of plaster, lead sulphate, iron silicate, fish oil and petroleum oil." This chemist's analysis indicates the paint to be of very poor quality. The Commissioner says he found paint on the market which is worthless, and fraud is being perpetrated upon the people of the State through the manufacture and sale of that commodity. The price paid for it is lost, the labor and cost of spreading it on the buildings is lost, and even after it has been spread over a building there is no body to protect the wood.

OIL IN WESTERN CANADA.

A NEW oil field has been located in Beaver Valley near Harper's Ferry, B.C. From surface indications oil can be had in paying quantities at 600 to 800 feet.

It is estimated that the daily capacity of the new oil fields of Pincher Creek, Alberta, is close on a million gallons. The big gusher just discovered is within five miles of the Montana boundary, and shows every prospect of increasing in volume. Surveyors are already running lines for branches of the Great Northern and Canadian Pacific railways to the oil fields. The Standard Oil Company are heavily interested in this district. Mr. Daly of the Dominion Geological Department, is quite sanguine as to the result of the operations now being carried on, and says the geological conditions in the district were of such a nature that he would not be surprised if large wells, producing from 8,000 to 10,000 barrels a day, were discovered.

NEW WOOD STAIN.

A new wood stain patented in France is intended to enable the ordinary staining dyes to penetrate further into the pores of the wood, so as to stand wear without rubbing off. Natschak and Wanecek employ as the solvent ordinary commercial acetone or other ketone, either alone or associated with alcohol, mineral oil distillates, turps, or light resin oils. The wood should be thoroughly dried before staining, and the solvent may be either allowed to evaporate spontaneously, or expelled by heat in a drying stove fitted with a condenser.

TO INCREASE BRUSH SALES.

Good mechanics require good tools and the finer the work the finer the tool must be. Painters are always on the alert for a good brush and dealers who can supply them need have no fear of competition. Look up the house, sign and carriage painters, varnishers and polishers in piano and furniture factories, and prove to them that the line carried in stock is the best they can secure. Go out after the business, supply good goods and sales are bound to continue to increase.

ELASTILITE VARNISH

has a quality all its own which commands the respect of our competitors who know it is the strongest recommendation for their own goods to say they can give you something just as good.

Be not deceived, get the genuine, the kind that builds up trade and holds it. For outside or inside.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, September 29, 1905.

TRADE is looking up and orders are coming in much more freely than at any time during the last fortnight. Manufacturers have every reason to expect that Fall trade will now begin in earnest. White lead is unstable at the present moment, but the best brands are still being held at full prices. Many firms are short in their supply of white lead ordered from the Old Country before the recent advance in duty, and as the supply of raw material which arrived in time to take advantage of the old duty is being rapidly exhausted, stiffer prices in ground white lead cannot be much longer delayed.

Through an error we recorded in our last issue that red lead was active as a result of the new duty. As a matter of fact there is at present no duty on red lead, the activity being purely in sympathy with the primary markets. It is expected, however, that the next revision of the tariff will show an increase in the duty on this product. Linseed oil has been decidedly weakened, but authentic reports show that the English market is strong, which would check any tendency towards a further drop in this country.

Owing to the advance in spelter and sheet zinc it is felt that dry white zinc must soon go up in sympathy.

Turpentine—Prices given last week have held steadily and we quote: Single barrel 91c. per gallon. Two barrels or over, 90c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Another period of weakness has been experienced this week with the result that our quotations are now two cents lower than last week. We give prices: Raw, one to four barrels, 45c.; 5 to 9 barrels, 44c.; boiled, 1 to 4 barrels, 48c.; 5 to 9 barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—In this market further advances are prevented by the fact that some firms who are still holding supplies of lead imported at the old duty refuse to put up the price, and it becomes simply a question of how long these quantities will last. In the meantime our prices are as follows: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc — The strength of spelter and sheet zinc on the market give us ground to expect that the price in this article will soon be advanced. We quote the following prices: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (Ground in Oil)—We still give the following prices: Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Prices are unchanged but strong. We quote: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—As pig lead has again advanced, added strength has been given to the following prices: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—We are still able to quote: Pure white in barrels, $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—A satisfactory business is being done, with prices ranging from $1.20 to $1.40 per gallon.

Castor Oil—An exceptionally strong demand is shown owing to the fact that buyers wish to get sufficient stock on hand before the close of navigation. We quote: 8 1-2c. to 9 1-2c., according to lots.

Refined Petroleum—The market is stronger than it has been for some time, and the price of refined petroleum has already been advanced by the Standard Oil Co. in the United States. The Canadian prices, however, remain unchanged, although crude oil has jumped up on the local markets.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 29, 1905.

LINSEED oil is the sensational feature of the market this week. Canadian producers have entered the market and are offering the home product about five cents less than the English oil. As oil is firmer in Great Britain the present move is a peculiar one, but the object is to stop importations and encourage the sale of Canadian oil. If the importations fall off prices will certainly increase again, and a week or two will likely see the present low figures advanced. The Canadian crushers state that they intend producing sufficient to supply the Canadian demand.

Turpentine continues to advance, and has seldom been higher in the south than it is at present. The quotations vary from 92c. to 95c.

The glass and petroleum conditions are unchanged. Business continues active in all lines.

White Lead — Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb.

Waggon and Implement Paint

This line is ready for use, easily applied, will dry quickly, and with an exceedingly durable gloss finish. It is the most economical on the market for the class of work for which it is prepared.

Specially adapted for painting and re-painting Agricultural Implements, Waggons, Trucks, Heavy Vehicles and Implements of every description. Blue, Red, Green, Yellow, Black. Gals., ½s, qts., pts. Send for prices.

Turpentine — Single barrel, 92c.; to 95c.; over one barrel, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Canadian crude oil has advanced 5c. and an increase in refined is expected. We quote: Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c.; 18 1-2c. ex warehouse.

Crude Petroleum — Conditions are unchanged. We quote: Pennsylvania, $1.36; Ohio, 92c.; Canadian, $1.32.

Glass—See current market quotations.

WINDOW GLASS—MONTREAL.

Conditions remain about the same as at our last report. The Leyland Co. are said to be rescuing some part of the Virginian's cargo, and some of her glass may yet be available for the trade. The brisk demand for window glass is steadily maintained, and as arrivals are still slow the advance made a couple of weeks ago holds good at time of writing. We quote prices: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

ADULTERATION IN SOUTH AFRICA

THE forty-fourth annual report of the Cape Town Chamber of Commerce for the year 1904 contains the following paragraph: "It has come to the notice of your committee that importations took place of white and red lead, white zinc, linseed oil, and turpentine, and that the trade description in a considerable number of such instances was irregular, calculated to prejudicially affect the higher grades of such articles, while at the same time perpetrating a deception upon the ultimate purchaser in this country. With the cooperation of the London Chamber of Commerce and the local Hardware Association, representations were made with the object of making illegal such erroneous trade-descriptions, and the Cape Government has accordingly issued instructions that all importations of white lead, white zinc, red lead and similar compositions, linseed oil, and turpentine, shall only be passed by the Customs authorities when marked 'reduced,' 'mixed,' 'boiled,' or 'mineral'; but that if adulterated to the extent of 50 per cent. or more the actual percentage of such adulteration must also be conspicuously marked. Your committee understands that this regulation will effectually prevent the undesirable proceeding complained of."

WILL DO THE WORK.

THE tedious and unpleasant system of removing old paint by "burning off," with its objectionable odors, can now be obviated by means of a chemical fluid, known as "Pintoff," manufactured by Holzapfel's Compositions Company, Limited, Newcastle-on-Tyne, England. In a recent test on paint, enamel and varnish it was first applied by means of an ordinary painting brush to two coats of white paint seven years old, being laid on freely and both ways, and then allowed to stand for five minutes, the result being that the paint became soft, and was easily and completely scraped with a knife from the deal beneath. Enamel paint twelve years old was removed with the same success after the "Pintoff" had been applied about ten minutes; and the result was equally good when put over ten year varnish. In each case no injury or stain was caused to the wood the grain of which remains intact, and having been wiped clean with a cloth saturated with turpentine, is ready to receive a fresh coat of paint. No caustic or corrosive action is noticeable in "Pintoff," which does not therefore injure the hands or brushes. It acts entirely as a powerful solvent on the hard dry substances into which fluid paints and enamels are converted by the action of the atmosphere, temperature, etc.

REPRESENTATIVE WANTED.

A United States firm, manufacturers of high grade iron and brass pumps for hand, windmill and power use, also of sanitary porcelain and enameled ware, are anxious to secure a representative in Toronto, Montreal and Quebec. Exclusive agency will be given to good reliable party. A fair connection among Canadian jobbers has already been established. For further information address Hardware and Metal, Toronto.

OLD COUNTRY VISITOR DELIGHTED.

Mr. Ackerman Jopp, who has extensive business interests in Glasgow, Scotland, is visiting in Montreal, the guest of his father-in-law, Mr. Robt. Munro, managing director of the Canada Paint Co. Mr. Jopp has shown especial interest in the improvements noticeable around the Board of Trade and Bank of Montreal building, and expresses himself as being delighted with these evidences of Canada's prosperity. Many advances have been made in Montreal since his last visit, and Mr. Jopp is very keen to appreciate them.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for addition to Drill Hall, Toronto, Ont.," will be received at this office until Saturday, October 14th, 1905, inclusively, for the construction of an addition to Drill Hall for cavalry, artillery, &c.

Plans and specifications can be seen and forms of tender obtained at th s Department and at the office of S. G. Curry, Esq., Architect, 90 Yonge St., Toronto.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent. (10 p.c.) of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, September 16, 1905.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (40

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Indian Head Breakwater," will be received at this office until Saturday, October 14th, 1905, inclusively, for the construction of a breakwater at Indian Head, Summerside Harbour, Prince County, P.E.I., according to a plan and specification to be seen at the office of J. B. Hegan, Esq., Resident Engineer, Charlottetown, P.E.I., on application to the Postmaster of Summerside, P.E.I., and at the Department of Public Works, Ottawa.

Tenders will not be considered unless made on the printed form supplied, and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for fifteen thousand dollars ($15,000.00), must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, Sept. 16, 1905.

HEATING AND PLUMBING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

Article XVI.

HEATING SYSTEM OF SCHOOL OF SCIENCE BUILDING, TORONTO

IN article 12 the question of the ventilation of the new School of Science Building at Toronto was discussed and, as promised, the system of heating adopted is now outlined.

The steam heating system adopted for use in the building is of the over-head, single pipe, gravity type, and the general plan of piping carried out is very well illustrated in Fig. 6, which shows the relative position of the boiler house to the main building, but not the pumps, receiver, etc., an elevation of which is shown in Fig. 7, and a plan in Fig. 8.

It will be seen that there are two boilers which are of the "Heine" type, and are run at a pressure of 80 pounds to the square inch, this pressure being necessary for the operation of the electrical generator, fan engine, etc.

From the boilers is run a 7 inch steam main to a point within the main building, where it rises directly to the attic, and is there divided into several branches, each supplying a number of drops or "main risers."

This division is not shown in Fig. 6 for, as was said in the beginning of these articles, it is not intended to give an exact description of the detail of this plant, but rather an accurate idea of the system which is in operation.

The branches from the steam main in the attic are all "swivel" connected to the "main risers," so that ample provision is made in this way for expansion.

Under the ceiling of the various flats, except the top flat, are taken branches from the main risers of a size suitable for the amount of surface to be supplied. and from each branch is run out horizontally a pipe 3 feet long, having on its outer end a "T" with openings looking each way.

From these openings is run in either direction a horizontal of ample capacity, gradually falling to the distal ends, from which points are taken "reliefs" $\frac{3}{4}$ inch. in diameter, these reliefs being in every instance carried directly to the main return pipe, which is run along the floor line of the sub-cellar, and is about 3 feet below an artificial water line (which will later be described) so that in every relief there is a perfect water seal.

From the horizontal branches referred to are taken connections to the various radiators which are sufficiently large to allow of the free flow of the necessary steam to the radiation and the return of all condensation therefrom. but for the reason that, as will be obvious, these two elements are traveling in opposite directions, these connections are somewhat longer in proportion than the balance of the system, where the level of both steam and condensation is concurrent.

It will readily be seen that with such a system of piping there is practically no possibility of water being pocketed in any portion of it, and hence the danger of "water-hammer," with all the trouble and annoyance that that implies, is reduced to a minimum.

The radiators used in connection with the system are almost without exception of the two "loop" variety, 26 in. high, standing on legs 6 in. long. They are of the hot water type—that is with the sections connected together both top and bottom—and have a grade toward the inlet of about one-half inch in the length of the radiator.

The air valve is placed at about one-third the distance from the end opposite the inlet, and about in the centre between the top and bottom of the loop—this arrangement being found by experiment to effect the most rapid expulsion of air.

Each radiator has a Jenkins angle valve of the high lift offset pattern, fitted on top with a diaphram actuated by compressed air, which is controlled by an electrically operated thermostatic arrangement, so that the temperature may be kept at any desired point, in any appartment, without regard to the re-

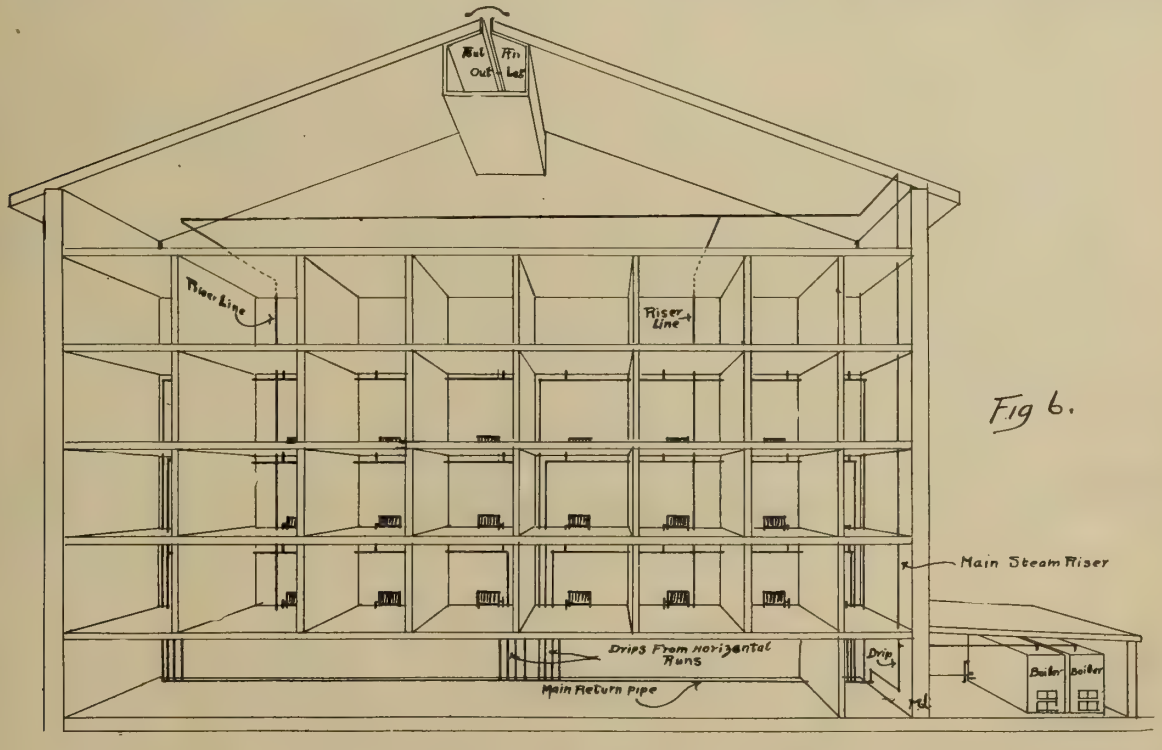

Fig 6.

quirements of any other portion of the building.

The whole system of heating, including the main tempering coil, is so connected to the exhaust pipe from the different engines as to permit of the use of exhaust steam for heating purposes, but as it is intended that a future article shall deal with this system of heating exclusively, it is thought wise to refrain from any lengthy reference to it on this occasion.

The pressure on the boilers, as before stated, will range around 80 pounds, and as not more than 5 pounds will at any time be kept in the heating system, the reduction being made by the use of pressure reducing valves, it will be apparent that condensation could not pass back to the boiler by gravity, hence the necessity of using a pump, and a reference to Fig. 7 will give a good idea of the arrangement in use.

The pipe at ground, to the left, marked "main return," is the pipe which collects all of the condensation from the whole direct radiating surface throughout the building. At the point mentioned it turns up about three feet to the steam trap, and in that way causes the water to fill up in all the "reliefs" to the same height, forming the artificial water line referred to before.

From the trap it is continuously discharged, under normal conditions, to the "receiver," from which it passes by gravity to the pumps at either side thereof, and thence to the boilers.

The pumps are automatically governed by a "Legg" controller (not shown). This controller has within it a counterpoised float, which rises when the water level attains a certain pre-determined level, and automatically opens a steam valve through which the steam enters the pumps, which continue to discharge water to the boiler until the level has fallen to a point where the float in the controller falling with it automatically closes the said steam valve again, when the pumps cease working until the operation is repeated.

The "by-pass" shown is used for the purpose of allowing water from the return to enter the receiver direct, when the trap for any reason is not in operation.

The "separator" is used for separating from the water any oil which may find its way into the system when the exhaust from the engines is being used. In such a case the condensation from the system, instead of passing direct from the trap to the receiver, as shown in Fig. 7, would pass first through the "separator" and thence to the "receiver."

Fig. 8, which is a plan of all connections shown in Fig. 7, shows how this is accomplished.

The operation of the "oil separator" is as follows:

The return pipe from the trap is brought in at the top and passed down through the water, which is always maintained at about the level shown.

The connection from the separator is taken out at a low point, and in consequence any oil passing across between these two pipes will naturally pass upward to the surface, from where it is drawn off through the "blow-off" into the "oil collector," the latter being provided with two valves, one to discharge any contained water to the drain, and the other to remove the oil for future use.

Of course a great deal might yet be said about the hundred and one small details of the whole plant, but a sufficient discription has perhaps been given to convey to the reader a fairly accurate idea of the principles adopted in what is undoubtedly a first-class system of heating and ventilation.

No figures as to quantities of heating surface and air supplied have been given, for the reason that it is the intention to deal with that phase of the business in another manner at a future time.

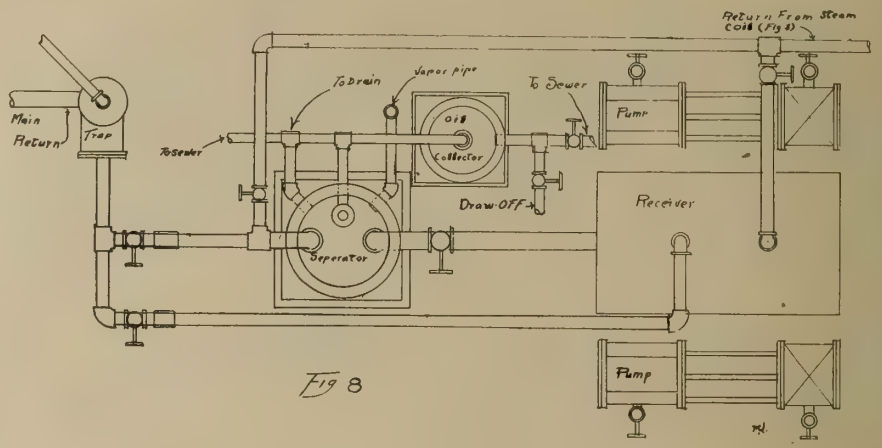

Fig 8

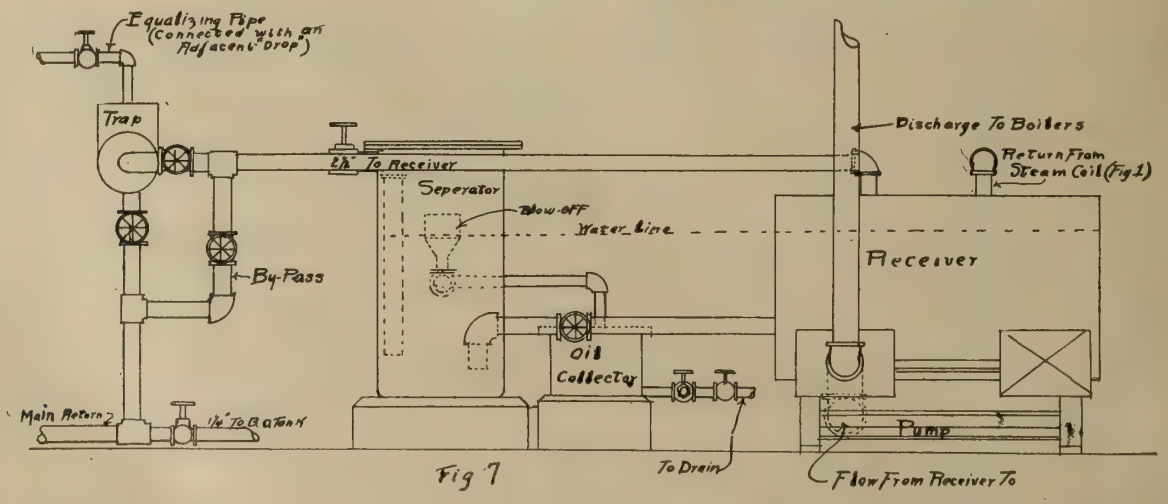

Fig 7

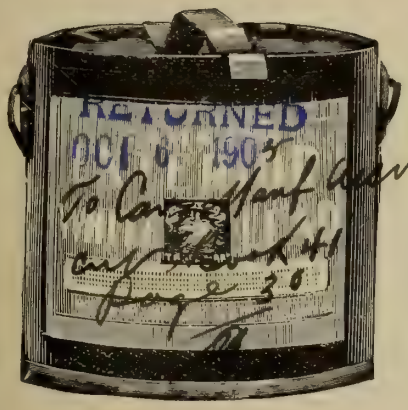

DON'T GO TO PANAMA.

Liberal inducements were recently offered to plumbers and steamfitters who would undertake to go to Panama and do work on the dwellings in connection with the big ditch under construction on the Isthmus. According to recent developments the liberal inducements were necessary as the place is a veritable hell hole for disease. The Springfield Republican states that it may be found necessary to call for volunteers to work on the canal as both Chinese and Japanese laborers refuse to undertake the work and the Italian ambassador to the United States advises Italian laborers to keep away from Panama on account of the unhealthy conditions prevailing there.

A FINE WINDOW DISPLAY.

No finer window has been seen in Montreal for many a day than that fitted up by W. J. Wall, local representative for the J. L. Mott Iron Works, of New York City. The window is a part of his place of business on Bleury street, and embraces a type of a modern bath room, equipped with Imperial porcelain. The bath, the shower, the stand and the accessories of a modern mansion are to be seen. Curtains and towels add daintiness to the picture, and crowds have been attracted by it. To those who contemplate building or re-

modelling the plumbing in their houses, Mr. Wall has a valuable booklet on modern plumbing that will certainly prove instructive and entertaining. The claim for the Mott equipments is that they have kept in view the idea that modern plumbing must not only be of a high standard from a sanitary standpoint, but also artistic in design and construction. The bath room exemplified in the window is but one that is now regularly installed in the home-beautiful of modern life. Mr. Wall is a hustler and represents also the Crane Co. of Chicago and the National Tile Co.

TORONTO M. P. A. BALL TEAM.

FOURTEEN games played and none lost is the splendid record of the Toronto Master Plumbers' and Steam Fitters' Baseball Team for 1905, the season just finished being one of the most successful since the formation of the association back in the eighties.

Manager Jack Wright is justly proud of his bunch of sportsmen and has kept an accurate record of the members' doings all season, 451 being the total

The officers of the club are: Honorary president, George Clapperton; president, K. J. Allison; vice-president, E. Larter; second vice-president, Geo. Cooper; captains, A. F. McPherson and W. Clewes; treasurer, D. Menzies; secretary, J. E. Fullerton; manager, John M. Wright; scorer, T. F. Nixon; umpire, W. Copping; stockholder, J. E. Knott; and managing committee of Messrs. D. McMullen, R. Wright, R. W. Harrison and A. Richardson.

Photos of both the Buffalo and Toronto teams are reproduced this week, the names of the Toronto team reading from left to right being as follows: Top row, Messrs. Harrison, Robertson, Nott, John Wright (manager), Nixon, Copping (umpire), Cooper; middle row, Clewes, J. Fullerton, K. J. Allison, R. Wright, Adams, Menzies, Brown; and bottom row, Benson and Elliott.

NATURAL GAS AT GALT.

Galt is to burn natural gas from the Welland district in future, the pipe line via Brantford and St. George being practically completed. The power of natural

boys went in a body to the principal and stated their determination not to attend school under the circumstances, afterwards parading the streets. The school authorities, who, it is said, have long known of the conditions, have secured an expert from Toronto to report upon them.

PLUMBING GOSSIP.

The Buffalo Forge Company through its London branch has secured the contract for heating and ventilating the buildings of His Majesty's dockyards, Portsmouth, England.

Guelph proposes to install a new system of filtration at the waterworks and is negotiating with the Roberts Filter Manufacturing Company of Philadelphia.

Rice Lewis & Son, Toronto, showed a neat window of plumbers' tools last week, in the window being pipe cutting and threading machines, hot blast torches, solder and soldering tools, pipe wrenches, saws, stocks and dies, pliers, gasoline torches and other tools necessary to the working plumber and steamfitter.

Toronto Master Plumbers' Baseball Team.

Buffalo Master Plumbers' Baseball Team.

turnout of the boys at the games during the season. It is pleasing to see the "old boys" of 30 to 50 years forgetting their business troubles and entering into the game as lively as they played on the corner lots years ago. The members of the association have become better acquainted with each other at the ball games and enduring friendships have been made which will weather the storms of business differences and association controversies. If the Toronto Master Plumbers' Association were to fall to pieces to-morrow the influence of the ball team friendships would cause it to be reorganized the day after.

The season's record is as follows: June 17, defeated Buffalo M.P.A. at Grand Island, 5 to 2; June 28, defeated Liederkrantz, 10 to 9; July 8, defeated Journeymen, 9 to 6; July 21, defeated Manufacturers and Supply Houses at Lorne Park, 25 to 23; July 29, tied with Swankey Bicycle Club, 9 to 9; August 3, defeated Buffalo M.P.A. at Toronto Island, 6 to 3; August 19, defeated Journeymen at St. Catharines, 6 to 0.

gas is fully a third greater than artificial gas and for illuminating purposes mantles are necessary. The proposed rates are such as to cause a tremendous volume to be used and the sale of gas stoves and fixtures should be very large this fall. The figures are: For lighting only, 70c per 1,000 feet, 10c discount, net 60 cents. For cooking and lighting, 70c per 1,000 feet, 30c discount, net 40c. For heating and cooking, 70c per 1,000 feet, 35c discount, net 35c. This would be the winter rate, October to May, 1906.

BOYS OBJECT TO BAD SANITATION

Twenty boy pupils in the Central school at Peterboro went on strike last Friday. They refused to go into the room which they had usually occupied, giving as a reason unsanitary conditions of the apartment, which, it is alleged, has existed for nearly a year, on account of defective plumbing. On Thursday the pupils held a meeting and a strike was ordered till such time as the necessary repairs may be made. The

The International Gas Appliance Co., Toronto, intend to erect a new factory to cost $6,500.

Ladysmith, B.C., is figuring on establishing an electric light plant.

Thos. Hammell, Beeton, is calling for tenders for the erection of a brick residence at Beeton. The tenders are to include the work of plumbing and heating and must be in by October 7th.

The work of installing their own electric light system by the C.P.R. at Brandon is well advanced. The plant will be located at the yards at the east of Brandon city and will be ready for use some time next month.

The electric bell is a little thing that ought to sell wherever a house is being built. And possibly in some old houses there is a chance for you to put in a bell or two.

Mr. J. O. Carslake, of Carslake & Lockerby, Collingwood, was in town again this week. His firm has been doing business for two years and devote the greater part of their attention to steamboat work. Business is said to be very good in his district.

Pertinent Facts about the NATURO Closet & Seat of interest to YOU

They are simply constructed—nothing to get out of order. There are three special features about their design which render them preferable to all other Water Closets, viz :

The bowl is lower—convenient to children. The seat slopes slightly from front to back, which, coupled with the lowness, does away entirely with the unnatural and unhealthy position caused by the old style Closets. The slight ridge at the rear of the Seat prevents soiling and wetting.

It is readily seen therefore that they will sell quickly. Architects have recognized these merits and are calling for them ; the public welfare demands them and they are daily increasing in popularity.

Their price is profitable and we furnish all advertising matter free, besides sending all inquiries from your locality to you.

The NATURO Company

C. H. MUCKENHIRN,
President

Salem, N. J.

GOOD ADVERTISING

PLUMBERS generally do not advertise as liberally as they might. In large cities there is tenable ground for conservatism, as the business being largely individualistic is divided into two classes—the firm looking for contracts bigger than can be secured through newspaper publicity; the small man with limited resources and banking on local trade. But in the towns and smaller cities, where the plumbing and hardware business usually go hand in hand, there is no adequate reason why one end should be advertised extensively and the other only spasmodically. With some dealers the discrimination can be attributed to a belief that people mostly negotiate with the nearest plumber when they have work to be done in this line, so why advertise? You get the job anyway. This is true of the "emergency" part of the plumbing business; but what about new outfits—that portion of the business where estimates are sought and the man who advertises gets consideration, and, if he has the "figures" and "stock," gets the contract? This transaction is not local. Its very importance demands inquiry, and "plumbing inquiry" does not stop at territory. There is no reason, then, why a dealer should not call into prominence the plumbing end of his business as well as the hardware end—push the two. In one of the advertisements reproduced on this page a trace of this plan of campaign is to be seen.

* * *

J. W. Barnes has a good conception of the elements which compose a telling advertisement. In the first place, his remarks are pertinent—extremely timely. Mr. Barnes conducts a plumbing business. He lets his readers know this—makes no bones about his superior workmanship and then—solicits business. This advertisement is a first-class specimen of the follow-up idea. The class of business is at the commencement, then the reason, then the grade of work, and last—"about your trade."

* * *

Peter & Sylvester have a different mode of making the same appeal as Barnes. They presuppose your plumbing is unsanitary and they inform you they can "help you out of that death-trap." Barnes alludes to the fact of his having skilled workmen. Peter & Sylvester, in their case, allow you to infer it. They paint the dark picture to make the contrast more complete. Altogether this is a striking advertisement, both because of its being unusual and finished in treatment—effective in a small space.

* * *

G. K. Smith believes in the fact that he is known and will be known. Consequently in his advertisements he draws attention to "G. K. Smith" and naturally you associate the name with plumbing and heating. This advertisement commences with silent argument, but shortly a line of reasoning is adduced. A new supervisor has been engaged by Mr. Smith. This, of course, deserves prominence and it is coupled with a note about "extra facilities" to make a twofold impression.

* * *

Typographically, Mr. Barnes' is the best advertisement. There is more uniformity of style and the composition shows the most taste. Mr. Smith's advertisement is fairly well designed, but the chief display line is too large—not from Smith's "business" point of view, though. Peter & Sylvester's advertisement is catchy, but there might have been more harmony in the choice of fonts.

* * *

Taken all in all, these three advertisements are safe models for any dealer to emulate. They stand for the most popular and seemingly the most valuable styles of newspaper publicity, while being totally dissimilar phases of it. They show in common a freedom from slang, a commendable business sagacity and alertness.

ADLETS.

You can get along without advertising; so can a wagon without grease—but it grinds.

* * *

Decide to be "one-sided" when writing your copy. There is no other side—to the question.

* * *

Don't try to hypnotize your readers with flashlight statements. Truth need not glitter.

MUELLER GROUND KEY WORK

No. 49 Stop and Waste Cock

C-139

A cock may completely serve its purpose as a stop but not fully answer it when open because of unmatched water-ways.

The stop lugs in Mueller Stop Cocks are milled true, so that when the cock is opened they cause the key to stop turning with the water-ways in exact line. They serve both uses equally well.

All Mueller Stop Cocks are given a 200 pound hydraulic pressure test as near like actual service use as possible, bear the Mueller trade mark and are *unconditionally guaranteed.*

We also make compression work and fuller work for plumbers' use. Catalogs on request.

WILLIAM STREET, - TORONTO

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 29, 1905

PREVAILING conditions this week show very little change from those chronicled in our last report. If there is a feature to be noted it is the great impetus that has been given to the heating side of the business by the cold snap of the past few days. Plumbers, both in Montreal and outside points are ordering a great many furnaces and boilers, as well as the other equipment necessary to the carrying out of good big heating contracts.

A surprising thing to the jobbers has been another awakening in lead. It was generally supposed that the end of the war would knock the bottom out of the lead boom, but this proved to have been an incorrect prediction, and we are at a loss to explain how this latest jump has been effected.

Iron pipe fittings are coming in for a good share of the trade this week, and the market in iron pipe is also very fine. Soil pipe is being shipped in large quantities, and is one of the most active articles on a very strong market.

Range Boilers—A splendid demand is keeping manufacturers and jobbers busy. Our quotations are unchanged and are as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The price quoted last week is unchanged, but is much firmer, in view of an advance in pig lead to the dealers of about ten cents per hundred pounds. Our quotations: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

Iron Pipe Fittings—An especially good demand is keeping the prices very strong. Many big jobs requiring iron pipe and fittings are now on the tapis. We quote: Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—An upward tendency is noticed in the prices. Good sales are being made daily, and the trade may be said to be in a most flourishing condition. We quote as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—Large shipments are the order of the week. There has been no change in prices during the seven days since our last report Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—No change is reported in solder, though the strength of both tin and lead during the past week has had a tendency to stiffen the market to some extent. Our prices are as follows: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 29, 1905.

A TREMENDOUS business is being done in all lines of plumbing and heating goods, and most contractors are working their hardest in order to finish the work now in hand before cold weather puts a stop to work. The large number of buildings which are well advanced towards completion has created an active demand for finishing goods and enamelware, boilers and lead pipes are included, very large shipments being made in all directions.

The supply houses which deal more particularly in boilers, furnaces, radiators, etc., as well as those which make a specialty of steam heating supplies, are all loaded up with as much work as they can handle satisfactorily, some being in fact so busy that orders are about a week behind in being shipped. The manufacturers report that the demand for the new Sovereign boilers is especially brisk, while the orders for Daisy boilers are greater than the dealers are able to ship with promptitude.

Last week's prices still rule, no changes having occurred. Lead and brass continue very strong, while the active demand for goods prevents any of the other lines from weakening in any way.

Lead Pipe—Prices are very firm and there is a possibility of an advance. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings.—The recent scarcity of goods is not as apparent. The manufacturers are able to ship in larger quantities. Demand is active and prices steady. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—There is a strong demand for both iron pipe and fittings, and while stocks are not so large as they should be, manufacturers are able to hold the business in their hands. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper and Range Boilers—A large business is being done, the discount remaining at 15 per cent.

Galvanized Iron Range Boilers—Large sales are reported owing to the completion of contracts in dwelling houses. Prices continue strong. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—Buying is fairly active at the prices quoted last week. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 1-2 inch, $15.75; 3 in. $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—A fair demand exists and the firmness in the lead market prevents any decrease in price. Our quotations are as follows: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware—A tremendous volume of business is being done owing to the demand caused by contractors finishing work on houses which have been under construction. The Canadian producers are well able, however, to handle the orders being received. Prices continue unchanged. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50; special, $15.50; 3 inch rim, first quality, $19; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality, $19; special, $17; 3 inch rim, first quality, $20.50; special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.

BETTER SANITATION AT COBALT.

Dr. Bell, Inspector of the Board of Health, has returned to Toronto from Cobalt, where he spent five days making arrangements for placing the sanitary conditions of the famous mining town on a satisfactory basis. He found things in bad shape, from a sanitary standpoint, the whole town being dependent upon one well for its water supply. A sanitary inspector has been appointed to look after the proper disposal of garbage and rubbish.

A PERMANENT and Handsome Roof.

PIONEER PLUMBER DEAD.

Neil McNeil, one of the oldest residents of Kingston and probably the oldest plumber in Canada, died last week at the ripe age of 80 years after an eight months illness.

The late Neil McNeil was born at Glasgow, Scotland, in the year 1825. He received a public school education and afterwards became apprentice to a plumber for a term of seven years. He remained in Glasgow four years longer, but at the age of twenty-five started for Pittsburg, Penn. On the way out he stopped at Carleton Place to visit his sister, intending to come to Kingston by way of the Rideau canal, and thence across to Cape Vincent. While in Kingston he became acquainted with the head of the firm of Allen & Matthews, who

RETURNED
OCT 2 1905
To Comm
Ont Book H
page 8

Neil McNeil, Kingston.

advised him strongly to remain in the Limestone City. At this time the water works system was just being installed, and for five years the deceased acted as foreman thereof. In the year 1851 he opened a shop of his own and for many years was the only practical plumber between Toronto and Montreal, continuing in business until 1898.

During his business career he assisted in roofing the county court house and Royal Military College buildings. He also installed the heating and plumbing at Queen's University. One of his sons, Alexander, is a plumber in Chicago.

If any reader of Hardware and Metal is aware of a plumber having done plumbing work in Canada prior to 1850 the editor would be pleased to have a letter from him. It is by comparing the work done half a century ago with that done to-day that a proper appreciation of the advances made in sanitation can be secured.

Electrical Supplies of all kinds. MONTREAL.

CARRY STOCKS OF ELECTRICAL SUPPLIES.

MOST hardware houses in the smaller towns carry fixtures for both gas and electricity. They also should, if they do not already, carry batteries, bells, etc. These goods can be sold to the consumer, when handled in connection with the plumbing goods, at a fair profit and still be sold for less than the small dealer can possibly afford to sell them.

The lighting in almost all towns and cities is done by a central lighting station and the isolated plant must carry a stock of electrical supplies to meet their requirements or depend upon some local dealer in electrical supplies. There is not, as a general thing, enough business to justify a local dealer in carrying anything but the smallest possible line while, as a matter of fact, the demands of the consumer are varied greatly.

The small dealer in electrical supplies, doing wiring, must have a store in the main part of the town and must have some one constantly in attendance at the store while the owner is probably out working on contract work. This makes it necessary to make the rent and the clerk hire off of the very limited quantity of supplies that is sold.

Another matter that should be considered is that in a great many towns there is no one handling supplies except the central lighting station and when a customer desires to purchase a few lamps to replace those that have burned out he must go to the lighting plant, which is usually situated in some out of the way place, and when he gets there he frequently finds that during the day time there is no one in attendance. The location of the plant itself is such that it is hardly safe to send children as it is almost always along the railroad tracks and in an undesirable quarter of the town.

The inconvenience is as great to the lighting plant as it is to the customer and the lighting station as a general thing prefers to turn the lamp business over to some one who is in a store in the town. In some instances they have turned it over to the drug store, in other instances to groceries. Neither of these people carry wire, bells or batteries or any other kind of electrical supplies, while the hardware dealer almost always carries a number of things which are electrical supplies as well as builders' supplies. In other words, the plumber or retail hardware dealer is the logical person to distribute electrical supplies.

In some of the towns the lighting station has been following the practice of furnishing free renewals of incandescent lamps. This practice is gradually dying out and we think that within two or three years at the outside there will be no one furnishing lamps free.

A large hardware firm who have made a specialty of electrical supplies writes as follows: "Electrical supplies enter so largely into the matter of new buildings and housefurnishings (which lines of goods generally the retail hardwareman handles) that it seems as though an electrical supply department would be almost a necessary part of his establishment. In addition take the special lines of electric light lamps, with the various accessories which are liable to be bought by the average householder for his daily use; he is in the habit of going to the retail store for his housefurnishing supplies, and as the hardware stores are generally conveniently situated it makes it a most natural place for him to go."

A few years ago the hardware merchant started in the electrical business by carrying a stock of dry batteries, push buttons, bell wire, and other supplies needed for door bell work. After carrying this stock, he found that the public began to look to him for electrical incandescent lamps, and other necessary supplies for electrical repairing. Then, too, they had him furnish builders' hardware for houses, and he naturally drifted into furnishing gas chandeliers, and where houses were wired for electrical work, he began furnishing electrical fixtures, and then the combination gas and electrical fixtures, one thing

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

BOTH PROFIT AND SATISFACTION

IN HANDLING THE OXFORD STEAM AND HOT WATER HEATING SYSTEMS

Handle Only The Best There is more profit to the dealer in installing the best system. You have to live and do business in the same town with the customer for whom you install a heating system If what you have put in for him proves unsatisfactory, it does not tend to increase your trade with him and his friends in other lines. On the other hand, if you install a perfectly satisfactory heating system it remains for years as an advertisement of your business, which brings ever-increasing trade and consequent profits.

The Oxford System For 60 years we have studied to produce the best possible heating system. We have always led. At no time in all those years has there been offered to the Canadian public heating apparatus superior to what we were offering in our Oxford lines. Our Oxford Steam and Hot Water Heating System of 1905 has no equal. You may add our reputation to yours by handling the Oxford system.

Over-Hanging Fire Pot Perhaps the most striking feature of the Oxford Hot Water Heater is the improved fire pot construction. The walls of the fire pot above the fire incline slightly so as to overhang the fire. The effect of this is obvious. The heat does not **pass** as in a straight wall but is forced to **strike** or **impinge** before passing upward. This improvement greatly increases the heating capacity of the boiler. The first water section above the fire is made double the depth of any other section, and has bell-shaped flues, wider at the bottom than at the top. Here again the rising heat is forced to impinge on an enlarged surface, thus increasing its power.

No Gaskets or Washers All connections are made by our Oxford Steel Push Nipple, which makes a metal to metal joint, doing away entirely with the use of all Gaskets or Washers and preventing the possibility of a leak. As a practical man, this advantage need not be explained to you.

Other Points There are many other points of superiority in the Oxford Boiler which make it easy to recommend, easy to sell and perfectly satisfactory when sold.

Oxford Hot Water and Steam Radiators

used with the Oxford Steam or Hot Water Boilers form the most perfect heating system.

Every connection in the Oxford Radiators is made with the Oxford Steel Push Nipple, doing away with all gaskets, washers and leaks. They convey the heat to every part without waste and with admirable evenness.

AN INTERESTING BOOK

We have prepared a large, handsomely printed, and beautifully illustrated book on Steam and Hot Water Heating, which we will send free to any dealer.

Write for the Gurney Oxford book of Steam and Hot Water Heating Apparatus.

We also manufacture coal and wood stoves and ranges, gas stoves, ranges and heaters, hotel ranges, warm air furnaces, all kinds of cooking and heating apparatus, plumbers' supplies.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

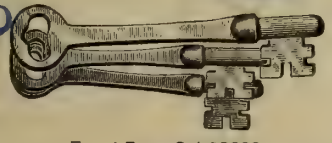
This year Canada and the United States are having the biggest boom in their history. There are more building operations going on at the present time than for years past, naturally there is a big demand for Builders' Hardware, which takes in Lock Sets, Butts, etc.

Customers want to be prepared, and have these goods on hand when they are called for.



The four designs we illustrate are the newest lines produced. These are sold at popular prices and we are having a deal of trouble in keeping them in stock, as they have met with the greatest favor from the buying public.

Everything to match, including Door Bells, Butts, Sash Lifts, Sash Locks, etc.

HARDWARE DEALERS MUTUAL INSURANCE

MUTUAL insurance amongst hardwaremen has proved a successful enterprise in the United States and is now being looked into with a view to adopting a similar plan under the auspices of the Retail Hardware Dealers' Association in Manitoba and the Northwest. The following comprehensive paper by Mr. W. P. Lewis, New Albany, Indiana, read before the recent convention of the Michigan Retail Hardware Dealers' Association, is therefore reproduced on account of its interest to a large number of our readers :

My purpose here is to urge the members of this association to carry policies in the National Hardware Mutual Fire Insurance Company of Huntingdon, Pa. Michigan has an association membership of 550. If every member had a policy in our company for the limit, namely, $3,000, we would have in force in Michigan alone $1,650,000. But what are the facts ? Michigan with 550 members has thirty policy holders in the National Insurance Company, or about 6 per cent. of her membership. Michigan with a possible total risk of $1,650,000 in the National Insurance Company has a total risk of $47,000, or about 3 per cent. of the amount they are entitled to carry. What is a fair inference from this condition of affairs ? There are two negative views. First, the mutual fire insurance is of little value, or second, that 94 per cent. of the Michigan membership are slow. I shall combat the first proposition and leave the second for the members to combat. In presenting, therefore, the reasons which have been sufficient to warrant the organization of a National Mutual Fire Insurance Company, I shall ask a bit of forbearance.

Encourages Membership.

In the growth of all State associations it was found that members demanded material evidence of the value of membership. It was pointed out, however, to them that they were making common cause ; that they were learning to know each other better, thus developing the fraternal spirit ; that there was the exchange of valuable ideas, and the acquirement of money-making information ; that manufacturers and jobbers by reason of magnificent displays and personal attendance, contributed greatly to the interest ; that there was at every convention most attractive entertainments and outings. Any one of these, and certainly all of them should be reason enough for every hardware merchant in the State to apply for membership and to attend the conventions. But there were many merchants who when solicited for their application, said it cost $4 to join. It cost railroad fare. It cost hotel bills. They could see no advantage and so declined. I feel sure, however, that this unworthy argument was never used freely in Michigan, but that class who would not recognize the more "spirituelle" reasons for acquiring membership in their respective State associations. The co-operative or mutual fire insurance idea came with distinct force. Here was a tangible advantage in membership. Every merchant must have fire insurance, and in the Mutual Company he could get $50 worth for, say, $30. The difference, $20, being sufficient to pay not only his dues, but possibly railroad fare and hotel bills, with all "spirituelle" influence thrown in. If it were inconvenient or impossible to attend, he would positively make $16 on a $4 investment in one year. But the rule was inexorable that he must be a member of the hardware association to have the advantage of the insurance. It thus developed that mutual fire insurance was a power, because those who were in could make a little money on their insurance premiums and those who were out were interested sufficiently to come in, that they too might participate.

The first view, therefore, that mutual fire insurance is of little value is highly erroneous. The second postulate is safe in the hands of the membership. Public opinion has been defined as the "stupidity of one multiplied by the stupidity of many." I quote this epigram but decline to indorse the sentiment. Personally I have the greatest respect for public opinion. Jumping to conclusions and haste may sometimes be charged against it, and sometimes it errs, but when it does it is chiefly because all the facts are not presented ; but given all the facts, public opinion is as straight as an arrow to the mark. When the Michigan membership understand all the facts, understand the underlying principles, have the fullest confidence in the management, comprehend the possibilities of the plan and become men of action as it is in them to be, as their ancestors were, the result will be beyond criticism.

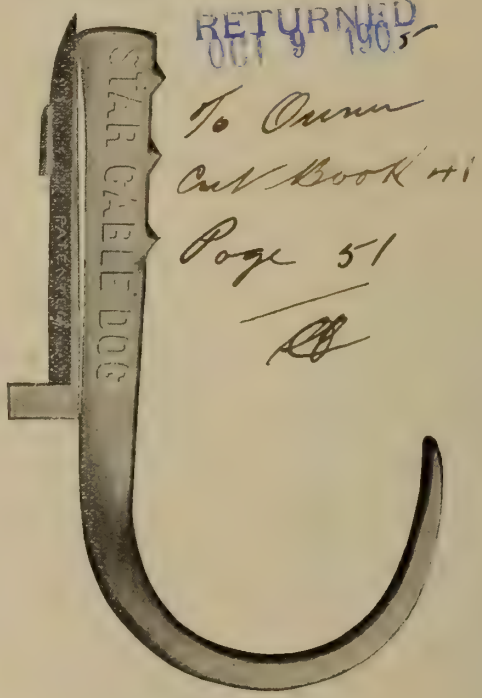
Pennsylvania with a membership of 206 in the State Hardware Association has 182 policy holders in the National Company, or about 90 per cent. The National Mutual Fire Insurance Company is the child of the National Retail Hardware Association. The following resolution was unanimously adopted at the national convention in Indianapolis, March 22 to 24, 1905 :

"Resolved, that a vote of thanks is due and is hereby tendered to the officers and the executive committee of the National Hardware Mutual Fire Insurance Company for their untiring and successful efforts in launching the National Insurance Company, and we respectfully recommend this company to all association members as offering safe and reliable insurance at a minimum cost."

National Company's Growth.

It has been said that people who have done nothing themselves are most active in claiming relationship with persons of note. The National Insurance Company is proud of its parentage and appreciates fully the temper of the foregoing resolution, but the National Insurance Company solicits business on its merits. No policy holder who has suffered fire loss has any but sentiments of the warmest approval for its methods of business. These officers are deeply interested in the company's welfare. They are ambitious for the company's future. They are keenly alive to every opportunity of development, and they have succeeded wonderfully. The company was formally organized in August, 1903, just two years ago. The first policy was written in November, 1903. The business to date is about $1,000,000. There is absolutely no "graft" of any kind, large or small, and the salaries are petty. But the management is encouraged to believe that while some of the expected benefits from hardware association effort may fade, grow dim and pass away, mutual fire insurance will loom larger and larger on the horizon of permanent achievement. Why should there be any hesitation in buying a policy in the National Company ? Are you fearful of mutual insurance ? The best flat insurance on earth to-day is that written on a class risk, with a limited policy, and hardware is probably the best class risk. Are you fearful of the mutual liability ? The extreme mutual liability of a policy holder in the National Company is an amount equal to the original deposit or premium. It would take a conflagration that would sweep the State to call for the limit of this mutual liability. Are you fearful of the officers ? They are under ample bond in the best guaranty companies. The National Mutual Insurance Company is organized on the best mutual plan known.

Advantages of Mutual Insurance.



Fire insurance has been a world institution for 350 years. 'Tis now a habit grafted on our civilization. 'Tis a good habit, in fact, an absolutely essential habit to commercial success. The figures from the stock companies show that there is one fire loss to every 27 policy holders, but keep clearly in mind that these stock companies insure every class of merchandise and by reason of this fact their ratio of fires to policy holders is 1 to 27. The National Mutual Hardware Company has had seven fires. Two of these are not worthy of note, as the aggregate loss was under $10. Five of them, however, were normal fires, the loss ranging from $300 to $2,800. The National Insurance Company has 568 policy holders. The ratio of fire loss to policy holders in the National Company is one fire to 114 policy holders. Why this great difference in ratio in favor of the Hardware Mutual Company ? The answer is ready. Ours is class insurance. We do not have more than 2, 3 or 4 risks in any given community and these in all likelihood widely separated. Your chance of being called upon to help pay for fire losses in the stock companies is 425 per cent. greater than in our Hardware Mutuals. There may be in your mind this question : How can the hardware mutuals safely declare such dividends ? The answer is plain. In the

stock company you are co-insured with dry goods, boots and shoes, groceries, drug stores, general stores, confectioneries, car barns, factories, machine shops, railroad shops, manufacturing establishments of countless variety, also dwelling houses and personal property. The losses on these lines are great. Our company takes no risks on any of these lines, hence you do not help to pay for any of these losses in our mutual companies. Another point: In the stock companies you are co-insured with every nationality under the sun, but without reflection on any foreign-born citizen, the moral hazard in my opinion in our hardware mutuals is 500 per cent. better than any stock company. Again, in the stock companies you are co-insured with policy holders whose policies may be ten times as large as yours. If such a policy holder has a total loss he calls on you for ten times as much as you could call upon him for if you had a total loss. And lastly, while the stock companies make an effort to separate their risks as much as possible, it is still the fact that risks in a stock company are "bunched" many times more than in our mutual companies. And yet nine-tenths of the men here are carrying all of their insurance in stock companies when it is quite clear that Hardware Mutual Fire Insurance is based on the most ideal and the most rational plan of insurance known.

Six thousand hardwaremen, members of the National Association, voluntarily subscribing to its constitution, constitute a power which when acting in unison can accomplish ends of tremendous importance. If each of these 6,000 members carried a full limited policy in the National Insurance Company, the total risk would be $18,000,000. Averaging this at a rate of $1.50 the annual premium would be $270,000. The interest our company would receive from the investment and depositing of such premiums as this would far more than pay all the salaries and expenses of management. If managerial expenses can be made out of interest from investments and deposits, thus leaving the original premium chargeable with fire losses only the dividends under these conditions would be large. Figuring on a basis of 35 per cent. the dividend on this sum would be $94,500 per annum. That these 6,000 members carry insurance greatly in excess of $18,000,000 with stock companies is beyond question; that these 6,000 members do not carry anything like $18,000,000 with our mutual companies is equally true; that these 6,000 members lose therefore annually $100,000 in insurance premiums is a simple sum in arithmetic.

Other Advantages.

If a fraction of this sum so freely abandoned by the national membership was contributed annually to the treasury of the National Hardware Association, there is no reasonable trade adjustment in the interests of the hardware dealer that could not be accomplished. In no field of association effort would concert of action produce such visible results. I believe a working plan can be developed whereby a revenue from the business of the National Insurance Company could be set apart for the National Hardware treasury. This can only be done, however, by heavy concentration of business in the National Insurance Company. If the National Insurance treasury had the premium or deposit required on $18,000,000 insurance, the income from this deposit at 4 per cent. would be $10,800 per annum; all operating expenses being paid out of this there would remain a surplus of several thousand dollars which by agreement could be paid to the treasury of the National Hardware Association. Under this arrangement the policy holders' expectations of mutual dividends are in no wise abridged, but on the contrary are enhanced because operating expenses would be met out of the income from deposits, whereas now operating expenses are taken bodily from the deposits. Under this arrangement the sinews of war could be placed where there is the greatest need and also where the greatest good is accomplished. Under this arrangement the dynamic power of 6,000 hardware merchants is applied for their personal and associated interests. That this is not done is a regretable loss. Why this loss? Because of hesitation and prejudice. Throw them to the winds; the first marks the timid and weak, the second the narrow and small; walk squarely into the sunlight of optimism, opportunity and success. When the annals of the National Hardware Association are graven on the page of history, the most enduring institution recorded will be the Mutual Fire Insurance Company.

STAR CABLE DOG.

A NEW patent dog for fastening cables or small pipes, has been put on the market by the Star Expansion Bolt Co., 147 Cedar street, New York. It is made of malleable iron, galvanized to stand the A. T. & T. test, and the maker states that the hook can be bent snug over the cable without cracking or chipping. In setting it is only necessary to drill a hole just large enough to insert the shank and then hammer in the wedge. The principle is such that this causes a positive expansion at the inner end so that any subsequent strain on the hook will only cause it to become more firmly imbedded in the wall. In the maintenance of telephone, telegraph and electric lines a material saving in renewal and repair expense can be effected if the original fastenings are absolutely secure and permanent. Therefore, a decided advantage is claimed for the Star cable dog, as it will eliminate the use of all wood and other rotting and easily destroyed substances. At the same time it can easily be taken down without injury, as the wedge may be loosened by pressure of a hammer or chisel, thus releasing the hold. It is made in four sizes to carry cable from 1-2 to 2 1-4 inches in diameter. Shanks vary in length from 1 1-2 to 2 1-4 inches, according to the size.

LIQUID METAL POLISH.

Take eight ounces of Spanish whiting, which must be perfectly free from grit, and put in one quart of gasoline. Shake up the whiting and gasoline thoroughly. You will notice the whiting settles immediately, leaving the liquid as clear as water. To remedy this and, further, to make it a better polishing agent, add to each quart of the mixture 32 drops of oleic acid—no more, no less; shake again and the whiting will not settle. Apply to gold, silver, nickel, brass, glass or any kind of metallic surface with a piece of cotton flannel, rubbing well. Polish with a piece of same cloth.

NEW INVENTIONS.

E. F. ATKINSON, Battle Creek, Mich. has invented a wrench which belongs to that class having a fixed jaw and a movable jaw. The inventor's object is to provide novel details of construction for a wrench which adapt it for convenient adjustment to engage cylindrical or angular objects between its jaws and afford means for reliable holding the movable jaw at a desired distance from the fixed jaw.

C. Dilks, Alloway, N.J., has invented an improvement in saws, capable of application to band or circular saws, as desired. In practice the application of the bits and keys will not interefere in any appreciable degree with the tension of the saw at the rim thereof; nor will it detract to any material extent from the ring of the saw-blade in operation.

E. C. Springer, Mason City, Iowa, has invented an apparatus for sharpening

HAMILTON, ONT.

mowers, the machine being secured in place and the crank member clamped upon one of its driving wheels, some fine abrasive material such as flour of emery, is mixed with oil and applied to the ledger-blade, whereupon by rotating the working blade in the opposite direction to that in which they rotate in use, by means of the crank member, their edges will be sharpened. It is particularly applicable to "lawn-mowers."

W. H. Brock, Seaford, N.Y., has an improvement on pipe wrenches which relates to the manner of mounting the lugs. Means are provided to replace the plates when broken or worn out and to greatly cheapen the construction of the wrench. The plates may be made of fine and hard metal, whereas the handle may be constructed of comparatively cheap material.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

983. A London firm who are exporters of a well-known anti-friction metal, and who are also able to manufacture anti-friction metals to any given specification, desire to correspond with a responsible house in Canada, with a view to having their products thoroughly marketed in this country.

984. Inquiry is made by a London firm for the names of Canadian firms manufacturing binder twine and rope.

992. A commission agent in Birmingham would like to hear from firms in Canada in a position to supply veneer seatings, fancy roofing, etc., used in connection with the building of electric cars and railway carriages.

996. A firm in West Bromwich is open to appoint an agent for the sale of builders' hardware.

997. A Birmingham firm wishes to find a market for builders' hardware.

998. A London firm would like to be put in communication with Canadian firms open to purchase gas fittings and accessories.

999. A Birmingham firm is open to appoint an agent for the sale of their paints, varnishes, etc.

1002. A large Birmingham firm wishes to place brass and copper tubes on the Canadian market.

1008. A Birmingham firm inquires for Canadian buyers of castors and hinges.

1009. A Birmingham firm is in a position to supply Canadian buyers with coach brass foundry.

1010. A Birmingham firm would like to be put in touch with handlers of brass socket and screw castors.

1011. A large Birmingham firm is in a position to place cast and stamped brass foundry.

1012. A West Bromwich firm wishes to find a market in Canada for all kinds of springs.

1019. A Lancashire firm manufacturing a special boiler fluid and other specialties, wishes to get into touch with Canadian importers who can handle the material.

1021. A Midlands manufacturer of fish hooks and tackle would like to do business in British Columbia, and is prepared to appoint suitable resident agent.

ENAMELOID
A GLOSS PAINT FOR INTERIOR FINISHING

We want *you* to put ***Sherwin-Williams Enameloid*** on your shelves and get a share of the profits which dealers are making everywhere through its sale.

For years it has been the favorite article of its kind all over the Dominion. It's a specialty that enlarges a dealer's trade and profits.

S-W. Enameloid is for interior decoration of walls, ceilings, and woodwork. It is brighter and easier to keep clean than wall paper, and gives a glossy finish which stands scrubbing and cleaning. For this reason it is especially adaptable in places where absolute cleanliness is a requisite. On account of the high quality of its ingredients and the skill of its makers. Enameloid keeps its color and lustre for the longest time. S-W. Enameloid will please your customers and bring them to your store for other lines you sell.

The reputation and extensive advertising of our goods will be behind you. Write today to our nearest office for information.

THE SHERWIN-WILLIAMS CO.
PAINT AND VARNISH MAKERS.

Warehouses: 86 York St., Toronto; 147 Bannatyne St., East, Winnipeg.
1489

REDUCED PRICES.

On another page of this issue will be found the announcement of United Factories, Limited, to the effect that many lines of Boeckh's and Bryan's paint brushes will be lower in price for the coming season. This reduction we understand is brought about principally owing to their securing some very large stocks of bristles and other raw materials at exceptionally favorable prices, and this should be specially interesting to the hardware dealer as the general tendency on brushes has been for a gradual increase, owing to the fluctuating market price of bristles which are becoming scarcer and dearer and which will in all probability lead to higher levies in the Spring of the year when the great demand for, and consumption of bristles is on.

JAPAN'S FOREIGN TRADE.

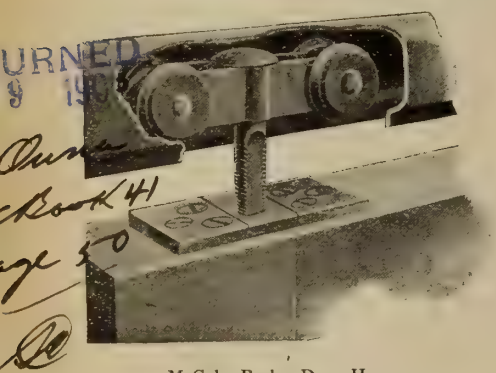
Japan's export trade for July, 1905, amounted to $12,124,196, showing an increase of $37,367 compared with the corresponding month of 1904, while the imports totalled $83,508,173, an increase of $3,588,493 compared with the same term last year.

The principal articles imported in which readers of Hardware and Metal are interested are as follows :

	July '05	July '04
Iron nails	89,484	55,709
Rails	31,567	151,902
Iron, bar and rod	312,169	184,898
Iron pipes and tubes	96,139	55,189
Other iron and steel	816,842	314,263
Machinery and engines	979,827	428,137
Locomotive engines	240,307	149,967
Steam vessels	118,376	342,762
Kerosene oil	64,270	870,703

An idea of the amount of railway construction under way and proposed in the west by the Canadian Pacific may be gleaned from the fact that the amount of steel received at Fort William this year is more than three times as great as that of last year. Since the opening of navigation, 50,000 tons of rails have been unloaded, as compared with 15,000 tons for the entire season of 1904. It is estimated that 10,000 tons more will be received before the close of navigation. The entire 50,000 tons are the product of the mills at the Canadian Soo. The steel that is yet to come is of American manufacture.

CATALOGUES, BOOKLETS, ETC.



When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Sash Pulleys.

A VERY neat and well printed booklet has been issued by the Grand Rapids Hardware Co., Grand Rapids, Mich., manufacturers of Patent All-Steel Sash Pulleys. The booklet comprises sixteen pages, exceptionally well illustrated and a neat cover printed in gold. Amongst the new improvements illustrated are ball-bearing and roller-bearing wheels. The latter are used for the highest grade of buildings, where windows are heavy and frequently opened. The dealers interested in builders' hardware should send for a copy of the booklet, mentioning Hardware and Metal when asking for a copy.

Door Hangers.

McCabe Hanger & Manufacturing Co., 425-427 W. 25th street, New York, have issued an elaborate catalogue describing the McCabe ball bearing and tubular hangers to be used on parlor doors, car doors, barn doors, etc. The mechanism is well illustrated by a series of cuts

McCabe Parlor Door Hanger.

and full descriptions are also given. The thirty-six pages which comprise the book are replete with valuable information, such as any dealer in builders' hardware should have. If Hardware and Metal is mentioned the McCabe Co. will forward a copy of the catalogue to any of our readers.

Paroid Roofing.

F. W. Bird & Son, Hamilton, Ont., have issued a booklet describing the good qualities of Paroid Roofing and giving a large number of illustrations of buildings and factories covered on both walls and roofs with the Bird Company's product. In addition to being a roofing paper Paroid is especially recommended for barns and poultry buildings where it is fast taking the place of shingles and clapboards. Paroid Roofing contains no tar and is claimed to be fire proof. If a copy of the booklet is sent for mention Hardware and Metal.

Disston Brand Files.

Henry Disston & Sons File Company, Philadelphia, Pa., have issued a large and pretentious price list of files and rasps which they have recently sent out to the trade. They state that in publishing this book they have endeavored to illustrate the different shapes and cuts of files most generally used. This will enable the customer to readily determine the file required for a particular purpose, and save both the dealer and buyer considerable trouble by enabling them to specify correct names, etc. The Disston brand files are made of the finest crucible steel. They are the only manufacturers in the United States who make the steel from which their files are produced, and thereby are enabled to secure an absolute uniformity of quality. The blanks are carefully forged to the most approved patterns adapted for the various classes of work. A number of shapes were originated by them, such as the Great American Cross-Cut Saw File, Chisel Point File for inserted teeth, Acme, with safe back for filing handsaws, etc., which are accepted by the trade as regular stock goods. The teeth are formed to give the greatest amount of strength, with sharp, keen, cutting edges, and at the same time to allow sufficient clearance to prevent clogging. Hardened by their special process, which imparts strength and durability, they state that they are warranted in making the claim that for wearing qualities the Disston Brand Files are unequalled. When writing for a list mention Hardware and Metal.

Water Motors and Fans.

A. Rosenberg & Co., Baltimore, Md., are introducing some splendid lines of motors which are attachable to the water tap in any house or building. The motors are made in many sizes and will run with any pressure, operating sewing machines, saws, coffee mills, fans, etc. Leaflets illustrating the line can be had if Hardware and Metal is mentioned in the letter of inquiry.

AND NO DISCHARGE

Bang the hammer of a loaded Iver Johnson against the table; throw the revolver around as carelessly as you would a handkerchief; handle it as roughly as you may, and there can be positively no discharge—don't do this with *any other make of revolver* if you value your life.

IVER JOHNSON REVOLVERS

You can't fire it unless you pull the Trigger

are the *only* revolvers absolutely safe from accidental discharge—*as safe in the home as the kitchen stove.* The reason lies in the fact that the hammer *never* touches the firing pin, and the firing pin never comes in contact with the cartridge except when the trigger is pulled *all the way back.*

Our Booklet, "SHOTS," mailed free with our descriptive catalogue, *proves* these claims and describes Iver Johnsons with complete illustrations. May we send it to you?

IVER JOHNSON SAFETY AUTOMATIC

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply you.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

EASY

is the word which describes the working of the

METALLIC ASH-SIFTER

Easy is the word which describes the selling of the METALLIC ASH-SIFTER. It's so simple. It saves so much labor. It lasts so much longer than wooden sifters, and it is so cheap. You certainly should be interested. Our Booklet is the first thing to get.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

ACCORDING to a conservative estimate, it would take five hundred thousand tons of steel rails to lay the Grand Trunk Pacific Railway from Moncton to the Pacific Coast. It takes one hundred and twenty-five tons of 80-pound rails to lay one mile of track, and, as the total mileage of the road will be, as near as can be at present foreseen, about four thousand miles, the total amount required is apparent. In view of this, it is interesting to calculate whether or not the two steel rail mills in Canada can furnish this supply. Since the Dominion Iron & Steel Co. began to make rails last Summer, their total output has been taken by the G.T.R., and has amounted so far to a little more than twenty thousand tons. Just now the mill is working satisfactorily, according to report, and is turning out from three hundred to three hundred and fifty tons a day. Their contract with the G.T.R. for this year was to supply twenty-five thousand tons. They have yet four thousand tons to deliver. A large amount of these rails has been used in connection with the double track of the main line west of London, and the Grand Trunk officials have been so well pleased with them that they have placed another order for twenty-five thousand tons to be delivered in March, April, May, June and July of next year. These rails are of the heavy type, and the ones that have been supplied so far have had before leaving the mill to undergo a more severe test, according to the statement of a G.T.R. official, than any other rails that have ever been used anywhere over the entire system. Reports from the Soo indicate that the rail business there is likewise gratifying. Deliveries to the Intercolonial Railway have met with approval. As the capacity of the mill there is said to be about the same as that of the mill at Sydney, about three hundred tons a day, an estimate might be formed of how long it would take the two mills to supply all the rails needed for the new national transcontinental railway. A conservative estimate would be five hundred tons a day, and at that rate it would take them three years and four months of steady going, counting three hundred days to the year. That means that it would take them a thousand days to make enough rails to lay the road from Moncton to the Pacific Coast, even were they to make no rails for any other purpose. But allowance must be made for renewals that are being made every day all over the Dominion. The C.P.R. use on an average about forty thousand tons of rails for renewals every year, and the G.T.R. about twenty-five thousand tons. One hundred thousand tons for renewals every year on all the railroads of Canada would be a fair estimate. If the mills can turn out only one hundred and fifty thousand tons a year that would leave them only fifty thousand tons for new roads, and at that rate it would take ten years to supply enough extra rails to complete the Grand Trunk Pacific. Of course, the mills claim a larger total capacity than five hundred tons a day, but that is without allowance for mishap and delay of various kinds. The price that the Canadian companies are paying for Canadian-made rails is said to be as high as the duty and the bonus will allow; that is, slightly under the price of foreign rails of a similar standard, plus the duty and the bonus and the freight. It is to their credit, however, that no fault so far has been found with the quality.

The Marysville smelter in East Kootenay is to be enlarged.

The Pacific Box Co., Vancouver, is contemplating additions to their plant.

The Skedden Brush Co., Hamilton, have taken out a permit for the erection of a $10,000 factory.

It is said that a large manufacturing plant may be established at Hull, Que., by an American company. About 1,000 hands will be employed in making metal tubes, according to the report.

An expert in the employ of Mackenzie & Mann is inspecting a rich iron field near Port Arthur, the intention being to secure a source of supply for great industries to be established at that quarter.

Employes of the Cumberland Railway Co., at Springhill, N.S., are again on strike. The men demanded an increase of wages, but the company would not give all that was asked. About 1,400 men are idle.

The share holders of the Brandon Binder Twine Co. are considering a proposition which may result in a reorganization of the company. Only one tender was received in reply to the offer to sell the plant.

Adair Mfg. Co. has been organized with a capital of $75,000, to erect iron works in Revelstoke and manufacture stump burners. The company will also establish a foundry and place air-tight heaters on the market.

Parry Sound voted to spend $20,000 to improve the electric light plant, and to grant a bonus of $25,000 to the James Bay Railway, who agree to make Parry Sound a divisional point, and erect machine and repair shops.

The plant of the Canada Car Co., Montreal, is rapidly nearing completion. Much of the work of equipping the immense shop is now in progress, and it is fully expected that they will be in full running order inside of a couple of months.

The ratepayers of Arnprior, Ont., have voted favorably on a by-law granting a loan of $35,000 to the Montreal Suspender and Umbrella Mfg. Co., in consideration for which the company will erect a large factory there. The manufactures now carried on in Montreal, Ottawa and Sorel, Que., will be removed to Arnprior.

The Bertram Co. is now advertising for tenders for the construction of an addition to its works at Dundas. The building will be a substantial two-storey brick, 200 x 116 feet, and will be

equipped in the most modern manner. When completed the works will be about doubled in capacity, and the number of hands employed will be similarly increased.

The Canada Car Co. will commence about the middle of next month the construction of 1,000 new cars for the Grand Trunk, and after their completion work will be at once begun on 2,000 freight cars for the Grand Trunk Pacific. The G.T.R. placed its order for these cars last Spring, and the plant of the car company is now far enough advanced to make a start on the order for 1,000.

The Dominion Iron & Steel Co. of Sydney have contracted with the Grand Trunk Railway to supply 25,000 tons of steel rails, to be delivered next Spring. It is authoritatively stated that the Grand Trunk Pacific have placed an order with the same company for steel rails to the amount of $4,000,000, delivery to be extended for a period of five years. The Dominion Co. have refused to accept an order for the delivery of a large quantity of rails of light weight required by the Chinese Government for an extensive railway system being constructed in that country.

The Trade and Commerce Department has withheld payment of a bounty claim amounting to several thousand dollars, which several of the Canadian steel mills have made upon their output of angle rail fastenings used upon railways. Parliament two years ago granted a bounty upon structural iron and steel, the intention being that is should apply to material such as is used on bridge construction and in the framework of large buildings. The steel men claim, however, that these rail fastenings come within the definition of "structural" since they are used in the building of railways. The Justice Department, in rejecting the claim for bounty on steel rails, ruled that a railway is not a structure. No opinion has yet been given, however, upon the point regarding the rail fastenings.

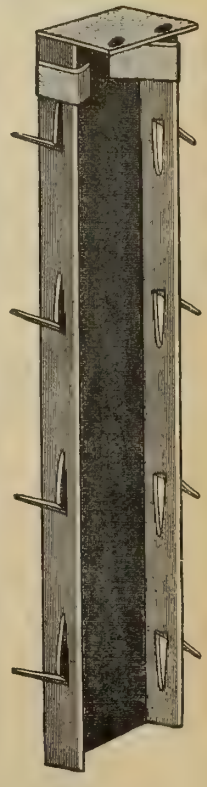
No. 24. OSHAWA, ONT. Oct. 7, 1905

Pedlar's Steel Solid Partition Stud.

Top Socket

Bottom Socket



Another Great Essential

The use of Fireproof Partitions has been customary in older countries for a great number of years, but in Canada the cheapness of lumber has, heretofore, made it impossible to get builders to use anything else. In view of the recent rapid advances in the cost of all lumber, and, in conjunction with the use of our Expanded Metal Lath, we have now introduced a **Fire Proof Partition Stud**, made from a very heavy grade of sheet steel that we are offering at a price that should commend it to all builders of substantial structures. Our nearest warehouse will be glad to quote prices and give all particulars.

Forge Ahead!  Forge Ahead!

Business Contentment is a bad condition to get into. To imagine you have "just" the trade and "just" the wares, without being able to prove it, is the opposite of wisdom. Quite a few hardwaremen seem satisfied to sell a stray lock here and there. Others reach out for business, look up builders and keep an eye open. Their success rests largely on the fact that they stick to Canadian goods—

Gurney Cylinder Locks

They can thus give lower estimates on supplying the hardware to a builder and, as far as the locks are concerned, back up their estimates with guarantees. **Gurney Cylinder Locks** get the cream of the Canadian business. Why shouldn't they? They are **made in Canada,** every bit, and **made well,** too.

BUILDING AND CONSTRUCTION

NEW BUILDING BY-LAWS.

A BY-LAW which has been under the consideration of the Montreal Council or its committees for over a year has at last been passed on to the council for ratification. Immediately after the Chicago theatre fire Building Inspector Chausse overhauled the by-laws of the city and as many safeguards were found wanting it was decided to remedy the matter, which has been done in the new by-law.

The clause referring to fire-proof construction excited considerable discussion when it came before the committee, as it enacted that theatres, boarding schools, orphanages, etc., should be protected against fire. Some of the aldermen wished to extend the application of this clause to all school buildings, but this was over-ruled on account of the enormous expense attached to this method of construction. The clause was adopted as it stood, with the addition that boarding schools should be considered as schools where dormitories are used.

In defining the meaning of the word "fire-proof," stone, steel and concrete were mentioned, but the words "or any other fire-proof material" were added so as to allow the use of new materials that may be discovered later.

That part of the by-law which deals with the theatres is very comprehensive and contains strict regulations as to the width of the aisles, and seats, doors, exits and the like. Doors must be three feet wide and must swing outward. Among other things the by-law exacts for theatres are automatic sprinklers, brick walls between the auditorium and the stage, asbestos or steel curtains, fire extinguishers, hose connections with the city water service, supplementary lighting service for stairways and exits, and a special fireman in each theatre during the hours of representation. In case this by-law is wilfully disobeyed, the city has the right to order the theatre closed until compliance is made therewith.

A further result of the new by-law will likely be that copies of all plans of buildings authorized by the city building inspector will be kept on file.

BUILDING NOTES.

Two new elevators are being erected at Davidson, Sask.

A consumptive sanitarium is to be erected at Hamilton.

Two new rinks are to be built by the Moosejaw Curling Club.

A new town hall to cost $5,000 is to be built at Sydney, N.S.

A new Catholic cathedral is to be erected at St. Boniface, Man.

Moose Mountain, Man., is to have a new town hall to cost $1,850.

The corner stone of a new $50,000 school has been laid at Regina.

Thomas Lovejoy, Hamilton, is to erect a brick residence to cost $1,500.

E. D. Roberts, Brantford, is to build a double brick dwelling to cost $1,800.

The Northern Electric Manufacturing Co. will erect a factory in Montreal to cost $115,000.

Tenders are being called for the erection of a club-house for the Vancouver Athletic Club.

A $30,000 office building is to be erected in Vancouver by J. A. Douglass, stock broker, Montreal.

The Southwestern Traction Company have purchased a site for a power house at Glanworth, near London.

The building permits issued in Montreal during the month of September show a total value of $635,000.

Tenders for the construction of a galvanized iron roof on the Bank of Montreal, Guelph, are being called for.

Contractors Edge and Gutteridge, Seaforth, have secured the contract to erect thirteen stations on the new Guelph and Goderich branch of the C.P.R. The cost will be $35,000.

Calgary ratepayers have defeated a by-law to expend $23,000 on a new police station and market building, and will now vote on a by-law to spend $35,000 on the new school.

A great shortage of cement on the markets in Pacific coast cities has resulted in important public work being suspended, and a large amount of English and Japanese cement had been exported from British Columbia ports. The works of the Vancouver Portland Cement Co. are being enlarged owing to the increasing demand throughout the Province.

The

PERFECT IDEA RANGE

SELLS WELL——and——STAYS SOLD

In deciding upon the line of ranges to push as your leader pick one that sells well and stays sold. The range that sells well is the one having points of merit and convenience above competitors. The range that stays sold is the one that works well even under adverse conditions.

RETURNED

Cut Book 42.
Page 78

Points of Merit and Convenience :

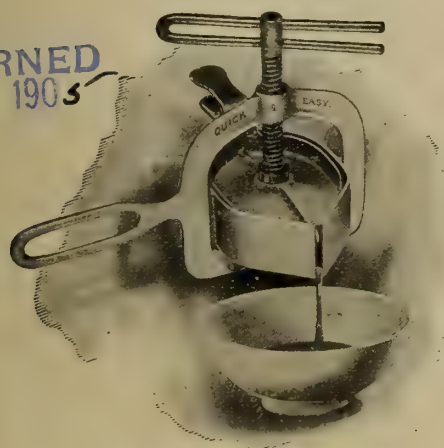
Large Ash Pan.
Grates easily removed.
All Nickel Trimmings removable—no bolts.
Deep Fire Box.
Dampers arranged to give absolute control of fire.
Oven large and perfect in baking.
Reliable Oven Thermometer.
Gas Attachment—is a great convenience.

These and other desirable features distinguish the Perfect Idea from others.

Better than all—the Perfect Idea will work where others fail.

Order a sample. Your experience will make you a "Perfect Idea" enthusiast.

The Guelph Stove Co., Limited, Guelph, Ont.



STOVES AND TINWARE

UNDERGROUND FLUES.

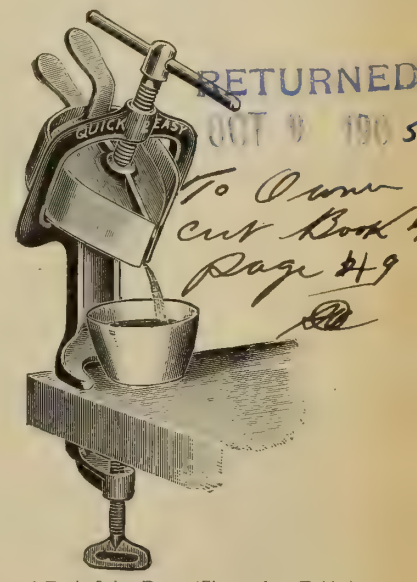
WHEN stoves are fixed centrally in hospital wards, or in open halls or shops it is convenient at times to make the connection with the brick chimney by an underground flue, says the Ironmonger. Overhead flues are undoubtedly better and cheaper when possible, but a visible flue-pipe is not admissible. When the floor or its foundation is of non-inflammable material the underground flue may be employed. A stove standing centrally without a visible flue has always a smart appearance. In most large kitchens, too, as in hotels and institutions, the range (of large size and with ovens on both sides) is now placed in the centre, and has communication with the chimney by an underfloor shaft.

The efficiency of a stove which is connected with the chimney by a flue beneath its own level will depend on the height of its chimney—that is, assuming the chimney maintains a proper updraught in it, and is of ordinary effectiveness. Some doubt is occasionally felt by the uninitiated whether an underground flue is at all practical, as it necessitates the descent of the smoke and gases immediately they leave the fire. This is what happens, however, in every modern cooking-range. To heat an oven in one of these the flame has first to pursue a perfectly horizontal path, then descend vertically, and again travel horizontally before it can ascend.

RETURNED OCT 9 1905

Meat and Fruit Juice Press (held in hand.)

The action that occurs in a kitchen range may be taken as an index of what is possible with a stove. We recall an experience with a range with a 24-inch oven, which was doing daily work and doing it satisfactorily with a 15-foot chimney. As chimneys are rarely so low as this the experience was unusual. The flue-range was of iron, and special care was taken to make all joints air-tight, as poor results were expected; but it would appear that a 15-foot chimney can successfully carry the products of combustion from the fire of a stove quite 2 feet in a downward direction and nearly 4 feet horizontally before ascending. This may form the basis of a rule. Good results may be expected with an underground flue if the height of the chimney is two-and-a-half times the combined length of the horizontal and descending flues, and this, as we know from other experiences, will work out correctly. The only proviso to be added is that if the descending flue exceeds 2 feet it should never be more than one-fourth of the length of the horizontal part or parts. Thus a 3-foot drop would be associated with 12-foot horizontal, working into a 37½-foot chimney.



Of course the connection between the stove and the chimney must be absolutely airtight at all points. The joints of the stove itself must be attended to if necessary, the connection with pipe-flue and brickwork must be carefully done, and the joints in the pipe-flue be soundly made. Ordinary glaziers' putty serves well for this and hardens with heat, but the surfaces must be painted first to make the putty adhere. When the stove is fixed all doubtful joints may be tried with the flame of a candle. If the joint is not sound a stream of air will be passing in and the flame of the candle will be carried with it.

The rule that has just been suggested must only be made to apply to stoves or ranges which work with a close fire, and it could not be expected to give such good results with an open grate. The reason for mentioning this is that when independent stoves are used in hospital wards, or in railway waiting-rooms, etc., the fire is nearly always of the open kind and does not work under the conditions of a small furnace as a close-fire or range does. There is, instead, a free inflow of cool air into the chimney, over the fire, and this materially reduces the efficiency of a chimney especially when the requirements are contrary to natural action. In these circumstances we have no experience of a good minimum to which to work. The least proportion we have seen adopted is nearly 50 per cent. greater than that already given, viz., the brick chimney three-and-a-half times the combined length of the descending and horizontal flues. This gave good results, but a blower was used to the fire when lighting (temporarily converting the grate into a stove), and the best plan to adopt is to have some form of blower provided with all open grates that are fixed in this manner.

When the underground flue is at all long, or the chimney inclined to cool rapidly, or there are conditions which make the draught sluggish when the fire is out, it becomes necessary to provide something at the base of the brick chimney to excite a keen draught in it before the stove or grate fire can be lighted each morning. Failing this the fire will fill the room with smoke and fail to burn properly. In some instances it is sufficient to put a soot door and frame at the foot of the chimney, and a good handful of lighted shavings thrust in here will prove sufficient to revive the draught. In many cases, however, the heat is required for a prolonged period. A "pilot" stove is then necessary. This may be any form of close-fire stove of small size, and a fire lighted in this for a short time beforehand will make the chimney hot and create a full draught. The "pilot" stove is then shut off with a soundly fitting damper and the grate-fire lighted.

MEAT AND FRUIT PRESSES.

WALKER'S Meat and Fruit Juice Presses, illustrated on this page, are being put on the market by the Erie Specialty Company, Erie, Pa. These new designs of presses overcome many objections, as the juice is discharged from inclined pan as quick as extracted, through the open slot at the pointed end, and therefore cannot clog up as in perforated pans, or soak back. The press plate and pan being removable, are easy to cleanse and perfectly sanitary. As all the juice is out as soon as screwed down, several pounds can be pressed in a short space of time. They are made in three different styles and three sizes of each style. The construction is durable, the frame being made of malleable iron, square thread steel screw, long nut, will not cut out. Pure meat juice is recognized by physicians as the best possible nourishment, it being highly nutritious and easily digested by the most feeble stomach when digestive powers become impaired. It is equally nourishing for the young and the old, and with the use of a good press it can be served with the least possible trouble and delay.

the foundries and orders are now considerably behind in their shipments. Year after year the retail merchants hold off the placing of orders till the last moment and then object if they do not secure prompt shipments. Years ago the retailers knew the demand of the trade well and placed their orders months ahead, but the more recent custom has been to endeavor to force the stove founders to keep large stocks, and to crowd the manufacturers with orders as soon as the first touch of cold weather arrives. This year there has been an improvement and more orders have been placed earlier than for some years past, many dealers having evidently been bitten by their own folly in delaying their orders until too late. There is still considerable room for improvement, however, in this direction as the number of late orders still continues very large.

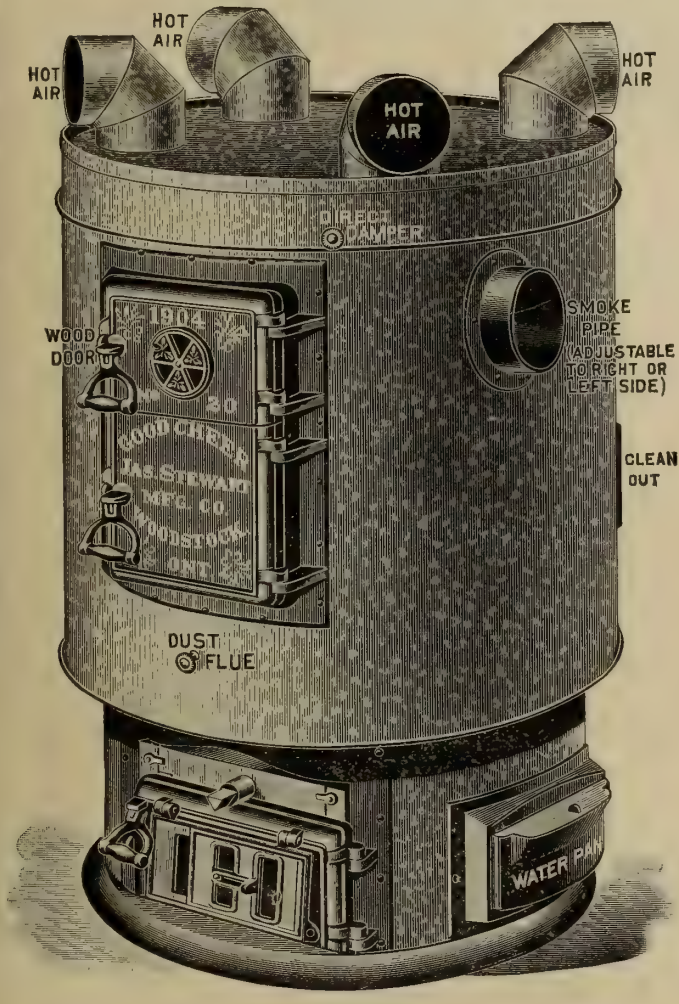
In the west where much depends on the success or failure of the wheat crop there is some reason for delaying orders until the last moment, but in most cases both in the west and the east, dealers know fairly well what their requirements will be, and they should assist the manufacturers by placing their orders well in advance of the Fall rush.

The large crop which will be gathered from the Canadian wheat fields this year has insured a successful Winter's business and while the kind of weather which is approaching is a mystery it is safe to say that from a retail standpoint the volume of trade to be done will be most satisfactory. So far orders have been placed very liberally by the consuming public but a few days of decidedly cool weather would stimulate the trade considerably. In those districts where the farmers have done their threshing, ranges and cook stoves are being purchased in large numbers and air-tights and heaters are also moving very well. The cool evenings are also encouraging the sale of oil heaters and small stoves used for taking the chill off dwelling-houses before furnaces are started. Altogether the stove trade is in excellent shape and there is nothing in sight to effect it adversely.

RUSSIAN VENTILATION SYSTEM.

THE "Timokhovitch" system of ventilation, a patented process of a Moscow firm, is reinforced natural ventilation, although under certain circumstances the patentees use electric or mechanical fans. In its simplest form the arrangement consists of an air-duct open at the end to the atmosphere, at which point louvres or swinging check-plates are introduced to regulate the quantity of incoming air. The duct itself ordinarily has four walls, one formed by the building, two by wood moulding, and the fourth by the use of a fabric. The exact quantity of the last-mentioned may vary, but it is essential that it should be loosely woven and that one side should be rough or woolly. This material is strained over the moulding or frame and acts as a filter through which the air passes. It is claimed that not only does it purify the air, but that owing to the nature of the fabric the air-distribution is equalized, draughts obviated, and thorough ventilation secured. In a school a convenient method is to carry the duct along or across the centre of the ceiling. In a factory, the large wood duct is sometimes constructed along the roof, from which the "Timokhovitch" ducts branch. In a mansion such an arrangement is obviously impossible, as no owner would allow the somewhat unsightly framing to cross his ceilings. Accordingly the inventors of the system arrange to carry the ducts around the wall, along the cornice, and in this connection the fabric to which we have referred already is decorated by art ornaments. In discussing the matter with Monsieur Sakuta, the question of the life of the filter-cloths and the cost of renewal was raised. Experience has shown that these require to be renewed about once a year, although obviously in some cases shorter intervals would be desirable. The cost of the fabric is small, and as the moulding under which it was strained is fitted with screws the actual work of removing the old and putting in new material ought not to be excessive. In Russia the method has been adopted in schools, churches, private residences, factories, railway trains and steamships, and arrangements have also been made in Denmark, Italy, Sweden, Norway and Hungary for the development and adoption of the system.

RISE IN THE PRICE OF TIN.



An extraordinary rise in the price of tin has taken place, and consumers are feeling considerable anxiety as to future developments. In January tin cost £132 per ton, a price which manufacturers then considered a serious item on the cost of their raw materials. To-day tin cannot be bought for less than £152 per ton, which is nearly equal to the record price. As there is no efficient substitute for tin in the innumerable industrial processes in which it is used its scarcity and its price are matters of much importance to British manufacturers. The tin mines in the Straits Settlements supply about three-quarters of the tin of the world, but these mines are unable to meet the ever-increasing demands, and prices consequently are likely to remain high. The English mines produce only a small quantity of tin. There seems some prospect of this precious metal being discovered in paying quantities in South Africa. It is not as well known as it might be among tinware manufacturers and others that scrap metal merchants give about 40s. per ton for scrap tin. The changes in recent years in the tinware trade have been many. A tinware manufacturer in the course of a conversation some days ago said that six years ago he made thousands of tin saucepans. To-day he does not make one, the enamelled saucepan having entirely killed his trade.—British Hardwareman.

COMPLETE ELECTRIC KITCHEN.

THE Niagara Construction Co., Limited, of Niagara Falls, Ont., have placed with the Prometheus Electric Co., 39 Cortlandt street, New York City, an order for a complete electric kitchen sufficiently large to prepare meals for fifty persons, and which will be used on the occasion of the opening of the new power station of the Ontario Power Co.

The equipment consists of an angle-iron table 18 feet long, on which are mounted three 5-gallon urns, with inner vessels for milk, coffee and hot water; one oven capable of taking 25-pound roasts or the equivalent; two large copper vessels for boiled dinners; three 12-inch by 13-inch boilers; one plate-warm-

YOU CAN TALK

the merits of the Imperial Oxford Range easily and readily, because you can do so truthfully. You do not have to strain a point even if you were so disposed, for this range fairly bristles with points of superiority over anything else ever offered.

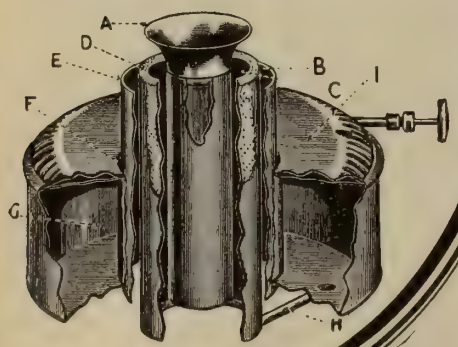
The first thing that a customer enquires about in a range is, of course, the oven. In this, the most important feature, the Imperial Oxford is unquestionably better than any other. The diffusive oven flue is the most effective, practical improvement ever made in oven construction. The Imperial Oxford alone has it. Show this device and explain what it does in baking and roasting and you have sold an

IMPERIAL OXFORD RANGE

There are many other points which may be demonstrated. The patent draw-out duplex grate, which can be removed and repaired without disturbing the fire-box lining or water front; the perfect arrangement of draught dampers and flues, making the Imperial Oxford the most quickly responsive and easily managed Range; and the accurate oven thermometer.

These talking points constitute an argument which should close a sale, but to these may be added the fact that the Imperial Oxford is the heaviest cast iron range, and that it is without doubt the most popular range, as over 40,000 Imperial Oxfords are in use in Canada to-day. If it were not perfect in every particular, it would not be in such universal use.

The appearance of the range will appeal to a prospective buyer and will do its own talking. The Imperial Oxford is well advertised and, on the whole, is the easiest range to sell. If you are out to sell ranges, it should be on your floor.



We also manufacture steel plate ranges, gas stoves, ranges and heaters, hotel ranges, hot water and steam boilers and radiators, warm air furnaces, and all kinds of cooking and heating apparatus, plumbers' supplies.

er 45 inches by 16 inches by 30 inches; and one steam table 5 feet long by 2 feet wide, designed to take four food compartments.

The total outfit is designed for a consumption of twenty-seven kilowatts and the output will be controlled separately by means of switches and keys.

AIR HEATING DRUM.

G. E. Leonard, Sheridan, Wis., has invented an air-heating drum, the object of which is to provide a new and improved air-heating drum for stoves arranged to support the tubular heating-drum on a comparatively cool surface by causing a rapid circulation of air through the heating-drum and providing the top thereof with an asbestos filling. It relates to heating-stoves having a tubular heating-drum, such, for instance, as shown and described in a former patent granted to Mr. Leonard.

TIN IN ALASKA.

H. W. Hammond, recently returned from the tin fields of Alaska, says that the placer deposits of tin ore near Cape Prince of Wales are spread over an area twenty-five miles long and ten miles wide. "In this field," he says, "there is enough placer tin in sight to equal for a century the present world output of ninety-seven thousand tons annually. Outcroppings of the ore from which these placer deposits have come have been located at various points in the York mountain range to the eastward, but thus far the main ledges have not been uncovered. The placer fields themselves are so large, however, and so easily worked, that quartz mining is not likely to be necessary or advisable for decades to come."

COLD AIR SUPPLY.

An ideal method regarding the supply of fresh air to the furnace is to have returns from the interior of the building. A circulation by this means is assured and a sufficient supply of fresh air will also be continually taken into the building through openings at doors and windows.

When outside air is introduced, ventilators must be used to form a relief and cause a circulation, otherwise the flow of warm air will be very slow. When both inside and outside air are used the circulation is very slow as one counteracts the other.

CONTRACTS SECURED.

Kelsey Warm Air Generators will be used in heating and ventilating the St. Andrew's Church at Arnprior, the Moira district school at Waskada, Man., and the new hospital at Winnipeg, contracts having been secured for these jobs by the James Smart Manufacturing Company, Brockville.

CUTLERY FACTORY ENLARGING.

J. Wiss & Sons Company, Newark, are building a four-story brick extension to their factory, which will give 6,840 square feet additional room. This with the five one and two-story extensions in rear of their building, will give enough additional room to take care of the increasing demand for Wiss shears, scissors, razors and tinner snips. The entire space is used exclusively for the manufacture of high-grade cutlery.

NEW AXITE SHELLS.

A NEW explosive, under the name of axite, has recently been introduced by Kynoch, Limited, of Birmingham, England, and it is now loaded in metallic sporting ammunition.

Axite is said to be a distinct improvement over cordite, one of the chief advantages being that the rifle may be left up to twenty-four hours without cleaning, owing to the fact that the new explosive completely eliminates the corrosive effects. A great reduction is also made in the heating of the barrel, as axite has gained the minimum of erosive effect. Furthermore, by the use of axite the pressure is greatly lessened and the velocity considerably increased, thus giving a more uniform rate of combustion and a more complete recoil than other powders. It is also claimed that the residue deposit in the barrel, after firing axite cartridges, reduces the friction between bullet and barrel, and it is, therefore, practicable to use axite cartridges giving higher velocities than can be employed with certain other powders, owing to the latter nickeling the barrel by excessive friction.

The sporting sizes of metallic ammunition loaded with this new explosive are carried in stock by Caverhill, Learmont & Co., Montreal, who will be pleased to name prices on application to those interested.

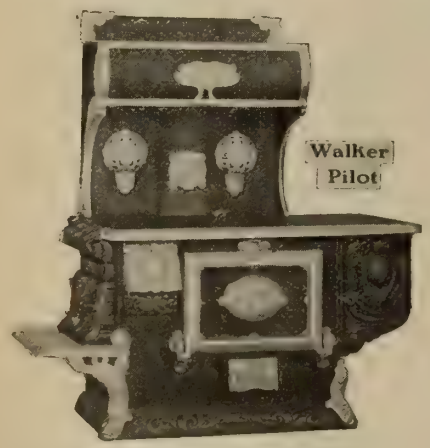
VORTEX HOT BLAST COAL STOVE
for Soft Coal, Lignite, Hard Coal, Wood, and lighter fuel.
For sale by
E. T. Wright & Co., Hamilton, Canada.

Cut showing cast iron flue back, guuranteed for twenty years. Steel or sheet iron flue backs rust out in a few years on account of the creosote, and condensation of smoke from the stovepipe and chimney.

THE "MIKASA" NATIONAL STEEL RANGE

IN CABINET FORM

The "Mikasa" cannot be beat in its class. The rivet work on the back of the range is just as perfect as on the front.



We guarantee that not one ounce of malleable iron is used in our fire-pots or other parts of the range, except where tensile strength only is required.

The pouch feed door is extra large, and will allow you to feed the fire when the top is covered with vessels.

Our oven bottom patent truss is rivetted in such a manner to the oven bottom that it impossible to warp, crack or change its surface in any way.

Key-plate top, sectional cover, reversible duplex grate, balanced oven door, and large ash pit, are some of the many practica and selling features of the "Mikasa" Range.

MADE ONLY BY **THE MOFFAT STOVE CO., Limited, WESTON, ONT.,** WINNIPEG CALGARY

All are Essential and All are Embodied in The

Present and Future Success. Arrange your stove line on a basis of lasting success, combined with a price that will enable you to intelligently and profitably look after the trade.

Demand Merit, First, Last and all the Time. Offer to your customers a thoroughly modern article, one that is replete with all practical utilities and conveniences. Do not injure your standing with them by selling an obsolete style of Range, made simply because some maker still uses the patterns of by-gone days.

Look for These Features. They are essential to the proper working and economy of any Range:

A proper end draft, along the entire length of the grate.

A perfectly controlled reservoir, encased in cast iron, and responding quickly when required.

Ash Pan of ample capacity, easily removed and without spilling of ashes.

A cast iron flue back that will not rust out.

Large pouch feed and broiler door.

WALKER PILOT STEEL RANGE

Other Features of this Range are: Balanced Oven and Closet Doors; Duplex Grates, removed without disturbing linings; Oval Firebox; Enameledware Tank; Oven Thermometer; Wood extension and a profusion of handsome nickel.

All parts are closely rivetted, oven bottom, lower edges and other parts strongly reinforced, and asbestos is freely used where necessary.

A NEW DEPARTURE

The Perfection Safety Furnace Pipe Co.

MANFRS. OF ALL KINDS OF

Hot Air Pipe, round or square,
Elbows, Angles, Register Boxes, etc.,
Galvanized Cold Air and Smoke Pipes.

Galvanized casings made for any make of Furnace. Our pipe is made to save you time, labor and material. SEVEN to TEN feet of pipe saved in every hundred. Fittings made to fit. Made by specially adapted machinery, and under the supervision of practical furnace men of long experience.

We also lay out furnace jobs for our customers free of charge.

Freight paid on all orders of 500 feet or over. See terms, etc., in our catalogue sheet, which will be sent upon application.

PROMPT SHIPMENTS—GOODS PROPERLY CRATED.

No. 3 Brookfield Street, - - TORONTO, ONT.

200 CANDLE POWER OF CLEAR, STEADY LIGHT

The best and cheapest light for STORES, CHURCHES and HOMES.

Gives more light than a dozen oil lamps for half the cost. Makes its own gas without smell, smoke, wicks or grease.

Satisfaction Guaranteed. Send for Catalog.

AUER LIGHT CO.——————MONTREAL

ARK-EL-ITE
TRADE MARK

Asbestos Stove Lining

An improvement over Fire Brick for lining and repairing Cooking and Heating Stoves, Ranges, etc.

This lining is made from the well-known Mineral Asbestos and other fire-proof material.

It is more durable than fire brick, clinkers will not adhere to it, and it can be applied in a few minutes.

No need of an expert; anyone with a pair of hands can apply it.

It is packed in heavy cardboard boxes, which are both attractive and durable.

10-six-lb. packages in case, price $1.50 per case.

MANUFACTURED BY

Francis-Frost Co., Limited

Makers of Celebrated "Ark" Brand Paints.

HARDWARE BUSINESS FOR SALE

Owing to the growth of our Specialty Business, now the largest of its kind in Canada, we have decided to dispose of our old established Hardware Business (organized 1867), with possession of the whole or part of the premises occupied, Nos. 1325 to 1331 St. Catherine and 221 to 225 Plessis St., Montreal.

This is a rare opportunity to acquire an up-to-date business with a splendid connection.

JOHN MILLEN & SONS

None Better

Why experiment with new, untried and unknown Oil heaters when you can handle a heater with a successful record of years - one on which you take no chance whatever ?

Our "FAMOUS" Oil Heater is simple and light.

Has no complicated wicks, burners, tanks, etc., but is a perfect working, economical and durable heater.

We Guarantee the "Famous" Oil Heater

THE ADVANCE IN GLASS.

DURING the past week there has been a very sharp advance in the price of window glass. Throughout the Summer there was a good demand which in the last month has been immensely increased owing to the completion of buildings under construction —so much so that stocks now held by the jobbing trade are very much depleted, and in many of the most popular sizes there is almost an entire exhaustion. After October 31st it is doubtful if any more boats will leave Europe for Montreal, as navigation in that port closes about the middle of November, so that it is very questionable if much glass will arrive to relieve the situation.

The European manufacturers have been extremely busy and have found it impossible to keep up with their orders. After the recent collapse of the Belgian Window Glass Workers' strike, which was of such a long duration, the manufacturers found that a great many of the old employes had left and procured other work, and so seriously did this affect the glass trade that at the present time the Belgian factories are not operating to more than half of their capacity. It will be seen, therefore, that the sources of supply being so limited and the demand so great in the local market, window glass will continue to be a very scarce commodity, and the situation cannot be relieved merely by an increase in price.

THE UNIVERSITY COMMISSION.

SOME years ago the unsatisfactory state of affairs in Toronto University, the college of the Province, was exposed in these columns, and a comparison made with McGill much to the disadvantage of the Toronto institution. We charged that the administration was bad and the instructional staff weak.

It was particularly pointed out that Toronto University was governed by a large senate, composed of clergymen, lawyers, doctors, dentists and musicians, and of these not more than three or four had made any mark in the world outside of their own little circle. There was not one business man among them. It was admitted that among the teaching staff of the university were some very able and capable men, but the greater number of them were not the best men that could be got for the position. They were appointed by political and family influence, regardless of a college or a provincial education.

Friends of the college at once rushed to its defence and unpleasant things were said about the MacLean Newspapers. One prominent defender opposed business men having anything to do with university affairs. We protested against the grant of any further money by the Government until the affairs of the university were completely reorganized and put in charge of a governing body composed of representative men, men who had scored sufficient success in their calling, whether in a profession or in business, men like those who managed the affairs of McGill University. The general public read these articles, they read the various defences, and they thought, and some people acted. First of all, a deputation of the Manufacturers' Association waited on the university authorities and the Government, urging action on the lines suggested in these columns. A chance investigation, though conducted by friends of the university, revealed enough to show that the charges made by these columns were not groundless. By this time the graduates themselves had begun to realize that the best interests of the college demanded a change. Finally the Premier of the Province, who is a graduate of the university, and a man of strong common sense, took the affairs of the university in hand and decided that something must be done. He stated that, "the Government will either issue a commission or take other steps to acquire information for the purpose of informing itself as to the best manner of changing the entire administration of the affairs of the University of Toronto. I am not now speaking of the teaching methods or the faculty at all, but it will be something abnormal, something unreasonable, if the affairs of the institution cannot be conducted in a successful way by plain business men. To that end the Government will devote itself, so that when we meet the House again we will ask them to accept a new system of management of university affairs."

He has now decided upon a commission composed of the very kind of men the MacLean Newspapers suggested as being the best sort for administering the affairs of the university. The results should mean much for higher education in this country.

MANUFACTURERS' LABOR POLICY

SOME three or four years ago Hardware and Metal criticized the Manufacturers' Association for taking part in labor disputes on the initiative of the then president, Mr. Cyrus A. Birge. It was pointed out that it would be in the best interests of the manufacturers to work on good terms with the mechanics in securing a tariff which would aid in developing manufacturing industry in Canada, the building up of which would insure steady employment for large numbers of workingmen. The employers' associations, we contended, should deal with all labor matters, their membership being made up of business men and manufacturers who might or might not be members of the Manufacturers' Association.

Experience in both Canada and the United States bears out the position then taken by this paper. In this country the Manufacturers' Association has not adopted a "hands off" policy on labor questions and attention has been drawn to their attitude by speakers in the Trades and Labor Congress, one result being that an anti-Chamberlain free trade resolution, which was only adopted by four votes at the Brockville session of the Congress two years ago, was carried unanimously at the Congress in Toronto last month. Where the Manufacturers' Association has desired to encourage a protective policy the direct opposite has been the result.

Across the line the American Manufacturers' Association has made a similar mistake and their organization is looked upon by wage workers as a purely capitalist body aiming to enslave labor by any means in its power. The association's president, P. M. Parry, by his public addresses condemning labor unions and socialism, has been made the target for thousands of speeches and articles encouraging the workers to look upon the Manufacturers' Association as hostile to the interests of every workingman. And the cereal foods of Manufacturer C. W. Post, of Battle Creek, have been subjected to a most persistent boycott because of the antagonistic stand he has taken to labor unions. The

Citizens' Alliances, composed largely of business men, have also taken a prominent part in labor troubles, and while they are looked upon as being opposed to labor organizations they are not hated so bitterly by trades unionists as is the Manufacturers' Association, which under Parry's leadership has made the "open shop" its chief aim.

Senator Mark Hanna's Civic Federation, organized as a sort of arbitration court, and having Samuel Gompers, John Mitchell and other trades union officials as honorary officers sitting side by side with August Belmont and other capitalists, has been more successful in fostering a feeling of mutual interest than either the Manufacturers' Association or the Citizens' Alliances, but the more recently organized Employers' Associations, led by Frederick Job of Chicago, are really the bodies which seem best fitted to resist the increasing number of demands which are made upon manufacturers by their employes.

In this age of organization employers must be better organized than the workers if the former are to retain control of their various industries. The labor unions were first in the field and won many a strike before the emoloyers learned that only by adopting the weapon of organization could they hope to continue to run their businesses as they deemed best. Nowadays a strike does not find the workers organized and the employers acting as individuals. Representatives of one organization meet the representatives of another and if an agreement cannot be reached a struggle ensues in which both sides are supplied with funds from outside sources. If disorder occurs the police and militia are called out to protect property from destruction. Power is no longer in the hands of the unions and not a strike of any importance has been won in recent years by the workers' organizations. So strong are the employers' associations to-day that some working-class papers are pointing out the foolishness of the workers acting like the balky horse and refusing to work, the contention being that the struggle should be transferred from the industrial to the political field.

Canada has been considerably freer from labor troubles than the United States, but as our country develops the danger of these industrial disturbances with their evil effects upon mercantile business will increase. It would seem, therefore, that the policy urged upon the Manufacturers' Association by this paper on several occasions was a wise one and the manufacturers should direct their attention exclusively to political questions, leaving industrial differences to be adjusted by the Employers' Association for the industry in which the disturbance occurs.

AUSTRALIAN TRADE.

THE recent visit to Montreal of Mr. J. S. Larke, the Canadian trade commissioner to Australia, has resulted in much greater attention being directed by the eastern manufacturers to trade with that country. Mr. Larke addressed a meeting of interested parties in the board of trade council chamber last week, and his remarks should succeed in arousing Canadians of the east to the great possibilities of the Australian market.

Mr. Larke made a somewhat radical proposal to Canadian business men, looking to the establishment of a steady trade with Australia. He advises that a company with a capital of at least half a million dollars be formed, to purchase goods directly from the manufacturers and export them both to the advantage of the maker and the profit of the export company. This mercantile company should have a branch warehouse in Australia, thus bringing Canadian goods directly to the notice of the Australian consumer.

Only a short time ago a deputation waited on the Tariff Commission at Vancouver, asking that steps be taken to arrange a reciprocity treaty with Australia, thus showing that Canadians of the west are fully alive to the importance of fostering trade with the island colony. But there are great difficulties to be encountered in such an undertaking. Australia would, of course, want some advantages in return for any preference to Canadian goods, and the limited number of articles that country has to export would make any satisfactory arrangement extremely difficult, though not impossible.

But a difficulty of even greater magnitude will be the problem of transportation to Australia, especially from Eastern Canada. The Maritime Provinces, by reason of their resources of gypsum, timber (including spruce for the manufacture of paper) and excellent roofing slate, should find a good market in Australia, where there is a brisk demand for plaster of paris, cement, and paper. Fish will also be taken by our sister colony in good quantities, with a preference for herring and other fish put up in tins in appetizing form. It is a peculiarity of the Australian market that no sale can be found for salted or dried fish. Steel is another product which could be supplied by the Maritime Provinces to command a wide field in the future trade of Australia. But all these articles demand much better transportation facilities than at present exist.

The bulk of the Canadian trade is now being done through New York, where there are sometimes delays in transportation of from five to eight weeks. Then there is the Vancouver route, too, but the great mass of goods cannot stand the charges of so long a haul overland. And so, if Eastern Canada is to hold a fair share of the lucrative Australian trade, it is obviously necessary that cheap, and therefore direct, transportation be furnished. In this connection it is well pointed out that Quebec and New Brunswick could always supply a reserve cargo in the shape of spruce timber, which can be drawn upon to fill a ship in case the better paying lines should not offer in sufficiently large quantities.

A feature which is not to be overlooked in determining the commercial advantages of Eastern Canada is the French Canadian labor in Quebec. Many of the people of this Province who have gone to the United States and acquired mechanical training and skill there, are now engaged in turning out goods of a superior quality, and some for foreign trade. There seems to be no good reason why the same skill could not be developed in Canada, and these people kept at home. Indeed, it is stated that even at the present time a good deal of the Canadian goods going into Australia are the product of Quebec factories.

Mr. Larke states that times are improving in Australia. In 1904 her surplus of exports over imports amounted to nearly $100,000,000, and should present prospects be realized 1906 may see a repetition of this extraordinary balance of trade. Mr. Larke believes in a great future for Australia. He expects large yields of gold from deep mining, also silver and copper in large quantities, new fields constantly being opened. However, the future of Australia will be in her agricultural development. She has great areas of land fitted for mixed farming, which are now used for pastoral purposes or in a state of forest.

WESTERN ASSOCIATION NEWS.

SECRETARY J. E. McROBIE, the energetic organizer of the Retail Hardware and Stove Dealers' Association of Western Canada, was in Winnipeg last Saturday on a flying visit and called at the office of Hardware and Metal. He reported very gratifying results in the new Province of Saskatchewan where he has been working for some weeks. Only some three or four hardware merchants had refused to support the association movement. But the increased membership list speaks for itself and comment is unnecessary. The following hardware firms have been added to the membership list:

Priestholdt Bros., Hanley, Sask.

E. R. Mann and S. H. De Wolfe, Davidson, Sask.

E. Troughton and T. J. Brock, Lumsden, Sask.

O. Edwards, Osage, Sask.

Morrison McLeod, Fillmore, Sask.

Jas. Lambe and J. Traundycek, Francis, Sask.

Doull & Banbury, Stoughton, Sask.

Moose Mountain Lumber & Hardware Co., Limited, Stoughton, Heward and Forget, Sask.

E. Dalquist, Forget, Sask.

Mountjoy & Glover, Heward, Sask.

J. G. Hooper and J. R. Nears, Arcola, Sask.

H. Cochrane and Porteous Bros., Carlyle, Sask.

J. M. Stephenson, Sinclair, Sask.

D. J. Fumerton, Reston, Manitoba.

D. Brown, Qu'Appelle, Sask.

A. V. Gerry, F. L. Mackay & Co., and C. T. Laird, Indian Head, Sask.

Grenfell Milling Co., and E. A. Walker & Co., Grenfell, Sask.

Smith & Ferguson, Regina, Sask.

J. B. Kernaghan and T. J. Agnew, Prince Albert, Sask.

J. M. Hackney & Co., J. P. Friesen, Wiebe & Epp, and Kehler & Abrams, Rosthern, Sask.

Geo. McIntosh, Osler, Sask.

Hildebrandt & Harder and J. P. Friesen, Hague, Sask.

W. H. Taylor, Dundurn, Sask.

Oliver & Kempthorn, S. A. Clark and Jas. Clinskill, Saskatoon, Sask.

Mr. McRobie returned to the country on Monday, resuming organization work west of Moosejaw. Many hardware dealers are preparing to shut off credit on November 1st and in all places where a local organization has been effected the members have met and by mutual agreement put a stop to price cutting.

COMING CHANGES IN PAINTS.

For several weeks Hardware and Metal has been reporting advanced prices in turpentine, gum shellac, pig lead and ingot zinc. These all have a direct and very important bearing upon many branches of the paint trade, and it was consequently expected that the manufacturers would soon raise their prices, particularly in mixed paints and shellac varnish.

This has already been done by some of the makers, though others are slow to do so, owing to the fact that good stocks manufactured from material purchased before the advances are still on hand. It is thought, however, that such stocks will all be exhausted before Christmas, and the big firms will then be unanimous in moving prices sharply upward.

Fleas invaded a hardware store in Wisconsin. They held forth on the floors, ceilings, boxes, chairs, desks and other appurtenances, from morn till eve, when they suddenly shook the dust from their feet and disappeared.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 1.

HERBERT H. CLARK was born in Peckham, Surrey, England, and lived in the city of London for 19 years, coming to Canada in 1887 and settling in Cookshire, Que., with the intention of learning farming. Not finding farm life congenial, he was engaged as clerk for T. B. Munro of Bury for some time, and later returned to Cookshire, buying out the fruit and confectionery business of C. S. Sawyer. About a year afterwards he sold out and accepted a position with the Cookshire Mill Co., where he rose to be head clerk and buyer. After four years with this company he was compelled through ill health to go to British Columbia, and was there during the mining excitement of the year 1896. Returning east, he became bookkeeper for Planche Bros., of East Angus, and on the dissolution of this firm entered the business of J. F. Kerr, Sherbrooke, from which he graduated after six months and accepted a position as traveler for Lewis Bros.

H. H. Clark,
Representing Lewis Bros., Montreal, in the Eastern Townships.

During the seven years of Mr. Clark's connection with this firm, he has seen it grow to be one of the first of its kind in the Dominion. At the first re-union of the travelers of the firm in 1898 they were a small company of seven, but at the last convention in December, 1904, the number had increased to twenty-one, only three of the original seven being still with the firm.

Mr. Clark resides in Lennoxville, in the centre of his territory, and always makes it a point to be in Sherbrooke on Saturdays to attend to his many customers there as well as to shake hands with those from outside points.

Since the incorporation of Lewis Bros. Limited, Mr. Clark has become a stockholder, realizing that by so doing he will have a more special interest in the continued welfare and success of the business, and with the co-operation of the headquarters staff can more surely live up to the motto, "Ship quick, quote low."

Mr. Clark takes just pride in saying that during his experience on the road he has, with only one exception, never lost a customer. He is enthusiastic over the phenomenal business of the present year, declaring that his sales are away ahead of those of any other year. This he ascribes to the flourishing state of the Eastern Townships, prices for all kinds of produce having been maintained at the highest level all Summer, thus giving more money to the farmer, who is really the backbone of the Townships and of Canada generally. As a poultry fancier Mr. Clark has a wide reputation, having exhibited prize-winners at many of the leading Canadian exhibitions.

THE-OUT-OF-TOWN TRADE.

IF there is any trade to be drawn to your store from surrounding towns, you ought to make every effort to get as much of it as you can.

People often have a lot more faith in a store located somewhere else than they do in their own local stores. No one knows why—it is the old principle of the prophet without honor in his own country.

If you advertise in the surrounding towns, you will create the impression that your store is a good one, or it could not expect to attract trade from other centres—and you will find shoals of people who will take you at your word.

If you are the first man in your place to reach out after this outside trade, you will get a good start on your competitors.

The big department stores in the larger cities have long recognized the value of this plan, and you will find that they advertise just as carefully and as persistently in the small local papers in the adjacent territory, as they do in the big city dailies.

Just cultivate this field as thoroughly as you are cultivating your home trade and note results.

Of course, your store has got to back up every promise you make and induce customers to come back again and again but that is an axiom that applies to all advertising.

PERSONAL MENTION

Ontario.

J. A. Henderson, Brampton, called on the hardware trade in Toronto this week.

A. Gingerich, formerly of Tavistock, has opened a hardware store at Woodstock.

V. Eastwood has purchased the controlling interest in the Peterborough Hardware Co.

Ald. Hugh Wallace, plumbing contractor, Hamilton, made a rush trip to Bradford, Pa., on Monday last.

Jno. McLennan, of the McLennan Co., Lindsay, has returned from a two months pleasure trip to Europe.

H. J. Farr, J. Bishop & Sons, Brantford, spent a few days in Toronto this week calling on hardware and paint wholesalers.

Will G. Conery is now representing the Bond Hardware Company, Guelph, on the outside as city traveler. His promotion has been well earned.

George R. Petrie, general manager of the Petrie Manufacturing Company, Hamilton, has returned from a trip to the Maritime Provinces.

Fire did between $3,000 and $4,000 damage to Foy Bros. & Southcott, wholesale and retail hardware merchants, St. Catharines, on September 26.

F. N. Burt, formerly in the hardware business at St. John's, Nfld., has purchased the hardware business conducted by J. Woodsworth, 842 Yonge street, Toronto.

The Consolidated Hardware Company has leased premises in Hamilton to manufacture metal goods, gas fixtures, wire goods and tacks. Thirty hands are employed.

E. R. Rogers, the new inspector of asylums, formerly hardware merchant, Toronto Junction, is making his first tour of inspection of the asylums in Western Ontario.

Col. Frank Noble, manager of the London Foundry Co., died last week. Mr. Noble was a veteran of the American Civil War and was in the employ of the Workman & Ward Co. for several years.

R. B. Smith, formerly general manager of the Massey-Harris Company's business in Western Ontario, has accepted the management of the Calgary branch of Wm. Gray & Sons, Chatham.

S. H. Chipman, president of the Ontario Wind Engine and Pump Co., Toronto, is on a trip through the west. He will stay in Winnipeg about ten days looking into the company's business at that point.

Thomas Oliver, hardware merchant, Copper Cliff, has been in the hospital with typhoid and pneumonia. He expects to be well enough to leave the hospital this week. His many friends in the trade will be glad to hear of his recovery.

Mr. Chas. World, traveling representative of the James Morrison Company, has returned from his vacation. Mr. World reports that fishing was very good during his vacation and he has a number of new fishing stories ready to tell his friends when he gets on the road again.

W. H. Cox, manager of Whitman & Barnes, manufacturers of small tools, St. Catharines, was in Toronto on Thursday of this week. Mr. Cox reports the outlook for the Winter trade to be of the brightest and states that business in his district during the Fall has been very satisfactory.

Col. Gartshore of the McClary Manufacturing Co., London, Ont., was a visitor to Toronto this week. Mr. Gartshore states that the demand for furnaces has been far above the average this year and although the foundries have been working to their utmost limit they have been unable to keep up with the orders booked.

J. H. Plummer, president of the Dominion Iron & Steel Co., was a visitor to Toronto this week. His health has been unsatisfactory following an attack of neuritis, and that recovery may be satisfactory he will spend the Winter in Europe after attending the annual meeting of the company which is to be held on October 18th.

Western Canada.

J. H. Ashdown is in British Columbia with the Transportation Commission.

Geo. D. Wood of Winnipeg returned on Wednesday from an extended trip to the Pacific Coast.

H. V. Lawlor, traveler for Henderson & Potts Co., Limited, went west this week. It is his intention to cover the towns between Winnipeg and mountains before he returns.

W. C. Perry, assistant manager of Geo. D. Wood & Co., Winnipeg, returned to his desk this week, after a fortnight's holidays pleasantly spent in duck shooting in the Dauphin district.

S. H. Chapman, president of the Ontario Wind Engine & Pump Co., of Toronto, arrived in Winnipeg last Friday. On his way to Winnipeg he visited a large number of manufacturing concerns in St. Louis, Chicago, and St. Paul. He will remain in Winnipeg about ten days.

Work is being rushed on the construction of the new structure for the Marshall-Wells Co., in Winnipeg. The structure, which is only the beginning of a very much larger building, will be four storeys high, 50 x 130 feet. Wm. Grace & Co. have the contract. The estimated cost of the building is $35,000.

J. Irwin, western manager of Henderson & Potts Co., Limited, returned to Winnipeg last week from Montreal. It was his wedding trip, and the journey was made in leisurely fashion by way of Kingston, Toronto, Niagara, Chicago and St. Paul. Mr. and Mrs. Irwin have the best wishes of Hardware and Metal.

Quebec.

N. Courtemanche, of St. Ours, was in Montreal a few days ago.

J. J. Murphy, contractor, of Quebec, was in Montreal this week.

P. O. Casarant, of St. Chrysostome, visited the Montreal jobbers this week.

T. A. Fajan, general merchant, St. Hilaire, was in Montreal on business this week.

Henri Myard, general administrator of the Island of Anticosti, was in Montreal recently.

Chas. Milot, general merchant of Ste. Monique, visited Montreal during the past few days.

Mr. Williams, of the Asbestos and Asbestie Co., Danville, Que., was in Montreal on Wednesday.

Mr. McKenzie, of Wood, Vallance & Leggett, Vancouver, B.C., is spending a few days in Montreal.

C. Leblanc, hardware merchant, of Joliette, was a business visitor in Montreal during the past few days.

Mr. Shaw, of the Chinic Hardware Co., Quebec, paid a short visit to Montreal, the early part of this week.

Mr. Brown, of Brown & Semple, plumbers, Brockville, called on the plumbing supply houses in Montreal this week.

S. F. Wood, vice-president and general manager of the Hobbs Mfg. Co., London, Ont., was in Montreal on business this week.

Jas. Campbell, of the Acme Can Works, Montreal, is able to be around again, and is covering the trade as usual.

Mr. Youlden, of Selby & Youlden, engineers and boiler makers, Kingston, Ont., was among the out-of-town buyers in Montreal this week.

S. S. Swasey, general manager of the Creamery Package Co., Limited, Cowansville, was in Montreal this week in connection with his business.

W. G. Butler, of W. G. Butler & Co., heating engineers and plumbers, Perth, Ont., spent a short time in Montreal this week, purchasihg supplies.

The Crescent Electric Co., Montreal, are retiring from the retail part of their business, and will hereafter devote their energies entirely to manufacturing and jobbing.

R. B. Cherry, representing the Sargeant Co., of New York, is taking orders in Montreal this week. To the inquisitive, we may state that Mr. Cherry has paid his $300 fine.

Alex. Gibb, manufacturers' agent and metal broker, 13 St. John street, Montreal, is looking for a young man well acquainted with hardware and metal trade, as a traveler and office assistant.

Mr. J. Roper, mentioned last week as having accepted the Canadian agency for John Shaw & Sons, Wolverhampton, England, is Mr. J. Harry Roper, so well known to the hardware trade of Eastern Canada.

W. H. Dorken, of Dorken Bros. & Co., Montreal, Canadian agents for H. Boker & Co.'s cutlery, has recently returned from his visit to the Old Country. His son, who accompanied him, met with a painful accident on the return trip.

The Canadian Fairbanks Co. have completed their contract with the Canada Car Co., Montreal, for shafting, Universal Giant Hangers, Oneida Steel Split Pulleys, couplings, rawhide, pinions, and other transmission material.

H. C. Hunt, of the Belleville Hardware Co., spent a few days in Montreal this week. Mr. Hunt is also secretary-treasurer of the Progressive Lock Works, Belleville, which is making such a good bid for trade that the capacity of the plant was recently considerably increased.

Mr. Harvey, of Bristol, England, has been in Montreal for some days, in the interests of Bristol as a shipping point for goods coming to Canada from the Old Country. A great deal of money has recently been spent on the Bristol docks, thus making them among the best in the United Kingdom.

R. H. Fortye, manager and secretary of the Peterborough Shovel & Tool Co., and formerly secretary-treasurer of the Peterborough Hardware Co., was recently in Montreal, attending a meeting of the directors of his company, which, though a new one, starts out with every prospect of success. The equipment of the Peterborough Shovel & Tool Co. is said to be among the finest on the continent.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Copper is slightly stronger at 17¾c. for ingots.

Ingot tin shows an advance of ½ cent, being now quoted at 36c. to 36½c.

Londonderry pig iron has advanced to $18.75 to $19.25.

Antimony has again fallen off slightly, present price being 14¾c. to 15c.

Bar iron has jumped up again, this time to $1.87½.

Old rubbers are commanding figures ½c. higher than last week. They are now quoted 6½c. to 6¾c.

Turpentine has gained 2c. per gallon.

Mixed paints have advanced from 5c. to 10c. per gallon in the smaller sized packages.

Shellac varnish has gained strength, and prices are advanced.

TORONTO.

Window glass has been advanced to $4.25 for Star, and $6.25 for Double Diamond — base figures.

Turpentine has advanced from 95c. to $1.00 in barrel lots.

Bar iron is quoted 5c. higher than last week.

Galvanized iron and black sheets — prices have been withdrawn.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 6, 1905.

SHELF goods are moving better than any other branch this week, although the market generally is very strong. Sorting orders in horse blankets are also reported in good volume while skates, sleigh bells, and snow shoes are being asked for in increasing quantities with every day.

Country retailers are already preparing for their Christmas trade by putting in good stocks of cutlery and silverware. These two lines have gained remarkably in popularity with the hardware trade during the past couple of years, so much so indeed, that in many cases, they can no longer be considered side lines. Safety razors, both in the cheaper and better grades, are taking a stronger hold on the market, those with a number of cutters being the most desirable.

In sporting goods, ammunition is still well to the fore, and not a few orders for guns and rifles are still being placed. One of the local wholesale houses is drawing attention to a new explosive called "Axite," which is said to excel Cordite in almost every particular.

Snowshoes are becoming more of a feature as the Winter draws near and one house which makes a specialty of this line has issued a neat booklet giving prices in the various grades handled by them.

Axes—The demand continues particularly good and as is the case in all hardware lines at present, prices are very firm. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—We quote as follows: Axe handles No. 3, $1.25; No. [illegible] No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—More attention is now being paid to this line and the various grades of machines are now being displayed in the show rooms of the local jobbers. Prices are unchanged as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Prices for future deliveries have been advanced, but the majority of the lanterns now being sent out were ordered during the recent slump in prices. We quote: Cold blast, $4.50; No. 0, Safety, $5.00.

Rivets and Burrs—As usual there is a good movement in this line. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote following prices: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts— Our prices are unchanged as follows: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Horse Nails—These goods are distinctly in season at this time and good orders are being shipped to all parts. We quote: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 60 and 10 per cent.

Wire Nails—The usual trade is now being done at following prices: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—Price remains $2.20 per keg, f.o.b. Montreal.

Horse Shoes—Like horse nails, the season for these goods is at its full height. We give the following prices: P. B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Ammunition is the strong feature, and the following prices are quoted: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—No change is to be noted in the last week's conditions and trade may be said to be fairly holding its own. For prices see our current market quotations in the back of this issue.

Cordage—As one of the staple lines of the trade, this is enjoying full measure of the existing prosperity. Prices are as quoted in the back.

Cement and Firebrick—No large orders are reported, but as a good deal of building is going on, a satisfactory volume of jobbing orders is keeping the trade busy. We quote as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—Good sized orders are going out every day. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—There is little activity in this line. We are still quoting as follows: Little Star, $4.85; Hudson, $5.00; Rocking Table, $5.25; Turn Table; $6; Canadian, $4.50.

Skates—In common with all Winter goods skates are moving well. Prices are from 25c. to $2.50, according to the quality.

Sleigh Bells—Indications are that this year's business will far exceed last. We give prices as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snow Shoes—Increasing inquiries from all parts of the country are now

being attended to by the local jobbers. Prices range from $15 to $35 per dozen pair, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Oct. 6, 1905.

EXCELLENT expresses the condition of the hardware markets at present. Business during the closing week of September and since the beginning of the present month has been far above the average. The crop that has caused considerable speculation during the past few months is now being harvested and the farmer knows pretty well what he will get for his summer's toil. He has been rewarded well for his work and when the farmer feels that way it is practically certain that the hardware merchant will have occasion to feel cheerful.

Sporting goods continue to be the most active line and the demand for rifles is picking up considerably. Guns and ammunition are still being ordered in large quantities, and while loaded shells have been none too plentiful, jobbers are now in a position to forward all the business offered. Woodenware, such as ladders, washing machines, etc., are in very strong demand and the trade is far above the average. Other lines that are being called for in especially large quantities are: Sleigh bells, horse blankets, halters and girths, cowchains being included in most of the orders. Besides these lines a general assortment of heavy hardware is being shipped and the trade in bolts, nuts, screws, and burrs is very large. The active demand is probably caused by the increasing price of iron and the certainty that the quotations on heavy hardware lines are certain to be increased shortly.

Builders' hardware, such as wire nails, putty, glass, cement, and building paper, are still called for actively, but the demand for wire goods is falling off considerably, the bulk of the trade in these lines having been done for this season.

Sporting Goods—Stocks of imported shells are larger and standing orders are being filled. Rifles are increasing in demand, while the call for shot guns and ammunition keeps up well. Fishing tackle is also in strong demand.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chains and other Fall lines are selling well. 1-4 inch, $6.50; 5-6 inch, $4.45 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Ladders are being called for actively and more than the average Fall trade is being done. We quote: Step ladders at 10c per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Barb and Coiled Spring Wire—Trade is falling off, the bulk of the season's business having been done. No change in quotations.

Wire Nails—Advances in the U. S. have not been duplicated here as yet. Demand continues very active.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horseshoes—Prices continue unchanged with the outlook for business excellent. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Axes—Both handles and axe blades are in strong demand.

Horse Nails—Blacksmiths are ordering in large quantities and dealers have no complaints to make.

Cutlery—Case goods and carvers are being ordered in large quantity. The volume of business booked is quite satisfactory.

Skates and Sleigh Bells— Merchants are ordering well, particularly for sleigh bells.

Lanterns—The bulk of the business was done in the Spring, but some sorting orders are being placed.

Apple Parers—Trade in this line is falling off some.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—The possibility of higher prices is giving an impetus to trade. Prices remain as before.

Bolts and Nuts— An increase is looked for by some on account of the advancing prices for iron. Mills have plenty of business.

Cordage—Sorting orders are being received. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.: sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton. 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—A scarcity exists owing to the heavy demands of the past season, and prices are very firm in consequence. We quote: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—Demand is expected to pick up this month. Quotations are firm, but prices are unchanged. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Manufacturers report business to be continuing active, the heavy building being done calling for a large quantity of goods. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool— The market continues active. Dealers can place all that are coming in at present prices. Stocks are quite depleted as the consumptive demand absorbs all arrivals and it is not expected that at the present range of prices dealers would attempt to stock up. Existing prices, whilst remaining very firm are not considered as denoting a healthy state of the market and some modification will have to develop before stocks will accumulate. We quote:

Hides, inspected, No. 1 per lb.		0 12
" " " 2 "		0 11
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected		0 14
" " No. 2		0 12
Lamb skins and pelt, best city slaughter		0 85
Rendered tallow, per lb.	0 04	0 04
Unwashed wool, per lb	0 16½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 6, 1905.

OLD country markets continue to show wonderful activity in pig iron and finished materials, so that a reflection of this is seen in the Canadian market at the present time. Importers have again raised prices on certain grades of pig iron and report that the market will be still stronger in the near future. Contracts which they are now placing with old country producers will not enable them to maintain the present prices at so low a level, and it is confidently predicted that pig iron will be very much higher throughout the coming Winter. As the iron market is always a safe barometer of general trade, the present condition is most satisfactory.

Tin is once more advancing, though jobbers have not yet raised their prices. The present activity simply reflects the trend of the market.

Copper has shown strength throughout the week without any sagging movement such as we recorded in our last issue. The price has been again advanced, ingot copper being now quoted at 17 3-4c.

Pig lead eased off in the early part of the week, but is now stronger and is well held at the old prices. Canada plate and black sheets are two lines which show a splendid turn over, but competition is so great that in spite of the general strength of the metal market, no advance has taken place over our former figures. It is said, however, on good authority that as soon as present stocks are exhausted and contracts now being placed rule the market, there will be a sharp advance.

Galvanized sheets have again been advanced to the importers and it seems very improbable that the jobbers can much longer quote their present prices on these goods.

Antimony has again declined slightly, though it is still quoted at an abnormally high price. The recent record breaking jump of antimony is now partially explained by the statement that the

C.F. JACKSON & CO., Limited

Wholesale Merchants

Ormidale Block, Vancouver, B.C., and Liverpool, England

Direct Importers of:

Metals of every description, Wire Rope, Portland ements, Firebricks, Ore Sacks, Grain Bags, etc, etc.

Chinese and Japanese had stopped producing at some of their mines.

Canada Plates—Galvanized plates are still in chief demand, but the whole market is so strong that a general advance cannot be long delayed. We quote: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—Copper has been firm without any let up since our last report and we now quote a higher price in ingot. Our quotations are as follows: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—Once more tin has jumped up and even at our amended prices it is remarkably firm and in some cases will not be supplied at these figures. We are at present quoting: 36c. to 36 1-2c. per lb.

Pig Lead—After a slight weakness in the early part of the week, lead has regained our former figures and is well held at $3.75 to $3.85 per hundred lbs.

Boiler Tubes— Our quotations are as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—It is reported that the strength of the Scotch market is largely due to the fact that American dealers are now being forced to buy across the ocean. Importers in Canada assert that as soon as present stocks run out higher prices will inevitably result and continue throughout the Winter. We quote:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—Owing to the general strength of iron and steel, both in Canadian and in foreign markets, the advances reported last week are still held. Our prices are as follows: Sleigh shoes, $1.97 1-2, tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.07 1-2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—We quote as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Importers report two or three more advances during the current week and as the demand continues very heavy still higher prices are anticipated. We quote as follows: Queen's

GALVANIZING AND TINNING
THE CANADA METAL CO.
TORONTO, ONTARIO.

Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—Enormous orders were placed last year so that stocks are fairly good and despite the advances in the old country Canadian jobbers continue to sell at the following prices: 28 gauge,$2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—We again report a slight falling off in price and are now quoting 14 3-4c. to 15c.

Tin Plates—Prices quoted last week remain unchanged as follows: Cokes, $3.75; charcoal, $4.00.

Ingot Zinc—Spelter has been jumping up again to the importers, though not sufficiently to warrant jobbers in amending our last week's prices. We are still quoting 6 3-4c. to 7c.

Sheet Zinc— This is another product which has advanced to importing merchants. We are still giving as the current prices: No. 8 and No. 9, cask lots, 7 1-2c.; less than cask lots, 7 3-4c.

Bar Iron—The mills are again being compelled to withdraw their prices owing to the strength and tone of iron and steel. They are now quoting: $1.87 1-2 base, f.o.b. Montreal.

Scrap Metal—Although no changes have taken place in scrap metal quotations on the local market scrap iron is looking up. For some time past the American market for wrought iron has been firm, but locally no activity has been experienced owing to the mills not buying. It is now reported, however, that the local mills will be in the market this month, though it is not yet certain what price will be fixed. Old rubbers show another advance, being quoted at from 6 1-2 to 6 3-4c. Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed scrap, 75c. to 90c. per 100 lbs.; old rubbers, 6 1-2c. to 6 3-4c.

H M Metal markets walsh 66

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 6, 1905.

HIGH prices rule in the metal markets. The outlook is most promising. The demand for all kinds of metals is quickening, while stocks are none too large. In pig iron several of the mills are booked ahead for some months and the prices we are quoting are likely to be advanced considerably during the next month or six weeks. Bar iron has shown another advance of $1.00 per ton and is now held very strongly on the local market. Copper is especially active and further advances are likely both in ingot copper and ingot tin. Spelter and antimony are a trifle weaker than in recent reports. Soft coal has jumped upward on the American markets on account of a shortage of cars and an advance here is likely at any time.

High prices for coke and coal also mean increased quotations on pig and bar iron. It is safe to say that the market is in as satisfactory a condition as it could be and while there is a danger of a reaction from the effects of overbuying, this danger is somewhat remote. Quotations have been withdrawn on galvanized iron and black sheets, higher prices being imminent.

Pig Iron—Prices quoted below are very firm and cannot be shaded by large purchasers. Great strength is shown in the existing market. We still quote:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	....	18 50
" No. 2, "	....	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Another advance of 5c is reported this week the market being especially active. We quote as follows: $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—The market is active and demand very keen. Prices are likely to advance.

Tin Plates— Demand is active with prices unchanged.

Galvanized Sheets—Prices have been withdrawn and an advance is looked for.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Stocks continue light and buying heavy at unchanged quotations. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Demand locally is not so active but the market is quite strong. We quote as follows: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—More activity has been shown this week and prices are very firm. We quote as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Stocks are light, but the market is weakening.

Old Material—A better demand is reported and much iron is being purchased by foundries. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.50 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $7.50 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 1-4c. per lb.; country mixed rags, 65c. per 100 lbs.

"Metallic" Embossed Ceilings are remarkable for their high art quality, light weight and regidity. Being cold pressed from high-grade steel, they are much firmer than other kinds.

No metal ceilings made are applied so easily over old plaster as ours. They never sag, warp or buckle, and their accuracy is such that the joints and edges are practically invisible. Used in connection with our wall plates they fireproof any room absolutely and add elegance to its appearance.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts.
"Metallic" Siding (stone, brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

405

Coal—A rise in soft coal in the coal fields has not yet been duplicated here, but a scarcity of cars may cause higher quotations to result. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, October 5, 1905.

WHILE the largest producers of iron and steel have been preparing for some time for the heavy consumption which they have anticipated, the buying movement has come somewhat earlier than they expected and has been of surprising volume. As an indication of what has been happening we may note that the September sales of the United States Steel Corporation constituted a record and have been double its capacity.

The most interesting development of the past week has been the rush to buy furnace coke for 1906. A number of the large steel companies have closed very important contracts and the pig iron makers generally have hastened to cover. The price has advanced to $2.55 to $2.65 at ovens for strictly Connellsville coke, which is about $1 above the price at which coke was sold in the Spring.

This means a very serious addition to the cost of production of pig iron and accounts for the attitude which makers are assuming. They are putting up prices and are chary of taking business beyond the first quarter of 1906. Then, too, the feeling is growing that speculative buying on the part of consumers, of which there are some indications, should be discouraged.

Back of all the excitement of the past few weeks is the fact that the general foundry trade, which in point of activity has so long lagged behind the steel trade, is now feeling the impulse of quickened consumption.

The large steel interests are outspoken in their determination to prevent a runaway market, and in this the makers of pig iron join, although they insist that prices must reach a level which will compensate them for the higher cost of manufacture. As prices now stand in this country and abroad there is no chance of any imports of pig iron outside of metal brought in in order to manufacture for export.

Steel is very scarce in all parts of the country. The rail trade has quieted down a little. It is understood that a small part of the New York Central order has been placed.

Additional contracts for plates and shapes for ships to be built on the lakes have been booked and more work of that character is coming up. It is generally believed that we are on the eve of an advance in the price of plates.

The pressure for structural material continues. This lends additional interest to the announcement that the Jones & Laughlin Steel Company has decided to build a new shape mill the capacity of which will be upward of 1,000 tons per day.

In the lighter lines bars have been displaying an advancing tendency and a further rise in the price of bands and hoops is expected at an early date.

It is interesting to note that Russia has again begun to take American iron and steel. Recently some satisfactory business has been done in wire, tubes and sheets.

LONDON METAL MARKETS.

From Metal Market Report, October 4, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 52s., and Glasgow standard foundry at 50s. 3d, making prices as compared with last week 2s. 3d higher for Middleboro and 1s. 9d higher for Glasgow foundry.

Tin—Spot tin opened strong at £148 12s. 6d. futures at £147 15s., and after sales of 400 tons of spot and 500 tons of futures, closed strong at £148 10s. for spot and £147 15s. for futures, making price as compared with last week £1 10s. higher on spot and £2 2s. 6d. higher on futures.

Copper—Spot copper opened firm at £71 15s., futures £71, and after sales of 700 tons of spot and 400 tons of futures closed firm at £71 15s. for spot and £70 15s. for futures, making price as compared with last week 15s. higher on spot and 15s. higher on futures.

Lead—The market closed at £14 7s. 6d, making price as compared with last week 5s. higher.

Spelter—The market closed at £27 12s. 6d, making price as compared with last week 7s. 6d. higher.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for addition to Drill Hall, Toronto, Ont.," will be received at this office until Saturday, October 14th, 1905, inclusively, for the construction of an addition to Drill Hall for cavalry, artillery, &c.

Plans and specifications can be seen and forms of tender obtained at this Department and at the office of S. G. Curry, Esq., Architect, 90 Yonge St., Toronto.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent. (10 p.c.) of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the owest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, September 16, 1905.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (40)

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Indian Head Breakwater," will be received at this office until Saturday, October 14th, 1905, inclusively, for the construction of a breakwater at Indian Head, Summerside Harbour, Prince County, P.E.I., according to a plan and specification to be seen at the office of J. B. Hegan, Esq., Resident Engineer, Charlottetown, P.E.I., on application to the Postmaster of Summerside, P.E.I., and at the Department of Public Works, Ottawa.

Tenders will not be considered unless made on the printed form supplied, and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for fifteen thousand dollars ($15,000.00), must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, Sept. 16, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (40)

WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Oct. 6, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

IN all departments of the wholesale hardware trade there is great activity this week. Heavy goods are moving in large quantities and big supplies are being rushed in from the east before the close of lake navigation. Prices are steady throughout in nearly all lines, but there is some keen competition in glass.

Lanterns—Wholesale prices are steady and unchanged, but retail trade is still demoralized. We quote:

Cold blast lanterns	$4 75	per doz.
Coppered cold blast lanterns	6 75	"
Cold blast dash "	7 25	"
Lift Lanterns	4 25	"

Wire—Prices are quoted as follows:

Barbed wire, 100 lb		$2 85
Plain galvanized	6 to 8	3 39
"	9	2 50 2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		2 85
Staples		3 35
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
Oiled annealed wire	14	3 30
	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Business is very active. Large orders are coming in from the east before the close of navigation. The price quoted is $2.75 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 co
" double bitts	12 00 to 18 co

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c

Ammunition, Etc.—Sorting orders are still coming in. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge	
black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—As mentioned last week there has been an advance in solder and it is now quoted at 21c. per lb. with concessions for large quantities.

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 16 to 16 gauge, 100 lb.	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price is now $7.75 for cask lots and $8.25 for less than cask lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote

Black iron pipe, ⅛ inch	....
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 5[illegible]
" 1¼ "	7 45
" 1½ "	8 9[illegible]
" 2 "	12 30

Petroleum—No change since the advance noted last week. We again quote:

Silver Star, per gal	21c.
Sunlight "	22c.
Eocene "	24c.
Pennoline "	25c.
Crystal Spray "	24c.
Silver Light	22c.
Gasoline, 74 76	27c.

(In barrels f.o.b. Winnipeg.)

Paints and Oils—Business in general lines continues active for immediate delivery. Travelers are now taking orders for shipment of mixed paints next Spring. We quote:

White lead (pure)	$6 00	6 25
Bladder putty, in bbls		0 02½
" " in kegs		0 02¾
Turpentine, pure in barrels		0 96
Less than barrel lots		1 01
Linseed oil, raw		0 60
Boiled		0 63

Window Glass—There is some keen

MINES AND MINERALS.

Arsenical iron ore has been discovered on Bowen Island, near Vancouver, B.C.

* * *

The recent reports of transcontinental railway surveyors regarding coal deposits in the Abitibi region are no surprise to the geologists in the Dominion Geological Survey. In fact many years ago Dr. Robert Bell discovered traces of lignite in Northern Ontario, and subsequently in 1885 Mr. Borrow confirmed the report of Dr. Bell. Lignite is a brown coal, which may be described as a fuel about half way in the state of carbonization, between heat and bituminous coal. The term is a loose one and includes materials of wide diversion in composition.

* * *

The New Brunswick company operating at LePreaux, N.B., have made a number of borings to test the quality and extent of the iron deposit. The deepest boring is 1,000 feet.

* * *

The Nova Scotia Oil & Gas Co. have reached a depth of 300 feet in the third well to test the oil formation at Cheverie, Hants county, N.S. Two previous attempts to locate oil were unsuccessful, owing, it is stated in a circular from the secretary, Dr. Hayes, to large bodies of salt water encountered in both cases. One of these wells was put down 2,300 feet.

* * *

The Dominion Coal Co. has commenced the work of sinking a new shaft at Donkin, Dominion No. 6. It is to tap the Emery seam which underlies the Phalen at this point at a depth of about 130 feet.

* * *

An order in council has been passed in reference to the royalty on gold mined from quartz in the Yukon. The order provides that a royalty will be collected on gold produced from claims upon which $25,000 has been spent for machinery, etc., within five years from the passing of the order. It is also provided that royalty is abolished with respect to copper claims upon which $50,000 has been spent within ten years. The order is to encourage quartz mining, which involves a greater outlay of capital to produce better results than placer mining.

* * *

A Halifax despatch says the Dominion Iron & Steel Co.'s billet mill, which has been closed down for repairs since Aug. 8th, has resumed operations. The starting of this mill caused a reduction in the staff of the new rail mill, and consequently the output of the latter will also be reduced through inability to get sufficient steel from open-hearth furnaces.

British Columbia Trade News

Vancouver, B.C., Sept. 29, 1905.

IF the mining men of the Boundary district get half what they asked from the Tariff Commission the industry should have little left to complain of. At the session of the commission held in Greenwood on the 20th sweeping demands were made in a memorandum submitted by representatives of some leading Boundary mining concerns, including the Granby Consolidated, the B. C. Copper Co., and the Dominion Copper Co.

The petition presented by the mining men may be summed up in the following requests:

1. Removal of duty on explosives, at present 3c per lb.
2. Reduction of duty on structural iron from 35 to 20 per cent.
3. Removal of duty on bar steel (used for drills, etc.).
4. Reducing by one-half present duty of 25 per cent. on mining candles.
5. Reduction of duty on rubber hose from 35 per cent. to 20.
6. Reduction of duty on iron pipe from 35 to 20 per cent.
7. Removal of present duty of 25 per cent. on rough and 30 per cent. on finished castings of steel.
8. Removal of $7 per ton duty on steel rails when used for mining and smelting.
9. Placing of blast furnace slag-trucks, blast furnaces complete and converting machinery complete on free list, also parts of machinery on free list used as repairs.
10. That a duty be not placed on rough lumber imported.

The argument was made by representatives of the mining companies that either the goods referred to in the list were not made in Canada, or if they were they were of such poor quality that it paid to buy abroad. It is now up to the Canadian Manufacturers' Association.

* * *

Atlin camp has had a practical demonstration of the utility of an ordinary steam shovel for gold dredging. During the past month or two the Northern Mines Co., an organization of Vancouverites, have had a steam shovel working on their property in Atlin, on Spruce Creek. The venture was largely in the nature of an experiment, as no railway steam shovels had up to then been tried. The results prove eminently satisfactory. The shovel had a capacity of 1,000 cubic yards per day of gravel, though while operated not more than 300 or 400 yards per day were handled. The shovel was put into commission on August 16th and at the last reports from the north it was still working and if the season remained open it would be run well into October. The plant was put to work in the bed of the creek and some dirt which was thought to be valueless but which had to be removed, was cleaned up, yielding quite a sum. When the shovel got down to "pay," a run of three or four days resulted in a cleanup of $4,450. As the shovel only cost $5,000 and the cost of transportation it is a very promising outlook for that sort of equipment, discounting hydraulic dredges very greatly, where the character of the ground permits of using the shovel. It is now quite expected that the Atlin camp will adopt steam shovels very generally for the Summer diggings.

* * *

The Canadian Pacific telegraph service is to be improved very shortly by the stringing of another copper wire from the east to Vancouver. The first copper circuit from Montreal to the coast was completed a couple of years ago.

* * *

North Vancouver, the promising suburb of the Terminal City, situated across the inlet, is to have telephones as well as electric light and street cars. This municipality has a fine water service of wood pipes installed last year at a cost of $50,000.

* * *

Mining continues to increase in a quiet, conservative way in many parts of the Province. In addition to the Boundary and Rossland districts, whose large properties are well known to the public, there are many others gradually increasing plant and facilities for handling ore. The Sullivan mines in Southeast Kootenay are enlarging their smelter at Marysville, not far from Cranbrook. The Ferguson mines, in the Lardeau, are installing plant and putting in a water system. The Britannia mines, on Howe Sound, now shipping actively to the Crofton smelter, purchased to handle its ores, will be the means of developing mines on Prince of Wales Island in the north coast district, as ore from claims there has been contracted for to serve as a flux with the Britannia ore. The Boundary smelters are just now suffering from lack of power, which will be remedied when the West Kootenay Power & Light Co. completes its new line from Bonnington Falls, practically duplicating its present installation. Hitherto the Cascade Power Co. has supplied power, but the source is inadequate. The Granby smelter at Grand Forks is only running six furnaces at present, and cannot blow in the full battery of eight till the new power is secured. With present nigh prices of copper mines managers are naturally anxious to run full capacity. The present output of Boundary copper is about 1,700,000 lbs. per month.

* * *

The mineral display of the Province at the Dominion Fair is a very interesting feature. Every mining district in the Province is represented, from Cariboo and Atlin on the north to Southeast Kootenay and the Similkameen. The Atlin exhibit is much larger and more representative than in past years, while it has a rare interest in the intrinsic value of the gold nuggets, dust and rich pieces of quartz. Many samples of mineral partially or wholly reduced from ore in the mills and smelters of British Columbia are also shown.

Nova Scotia Trade News

Halifax, N.S., Oct. 4.

NOTHING particularly new is evident in the hardware line. The markets, generally speaking, are firm. Prices are about steady, and no change worthy of special note has been made since last report. While trade is fair in some lines, it may be said to be considerably below the average for the

season of the year. The lumbermen are still holding back their orders.

* * *

The Robb Engineering Co., of Amherst, has received an order from the J. R. Booth paper mills for three four hundred horse-power engines, and three one hundred horse-power engines. The same company has received an order from the town of Westmount for a large engine for a municipal lighting plant, and from the town of Napanee, Ont., for engines and boilers for a lighting plant.

* * *

According to private advices received here another valuable discovery has been made at Newfoundland. It has often been suspected that the iron for which Bell Island is now famous has an outcropping on both sides of Conception Bay, and this theory has been practically demonstrated within the past two weeks. Accidentally the discovery of a big deposit of splendid iron ore was made by the men near Clarke's Beach. They secured samples and staked out a claim. The samples were submitted to experts at Bell Island, and pronounced to be richer than the ore mined there. The discovery was kept a secret, but it looks as if on the mainland of the bay there will be a big iron mining boom next Summer.

* * *

The mineral resources of Newfoundland are becoming greater every year. The development of the talc deposits, which are situated inland from Kellignews, is now being proceeded with, the capital being supplied by English investors. Should the mineral be found in sufficient quantity a surface railroad will be built to the deposits, to connect with the colony's railroad, for the purpose of getting the product to the market. It is the intention to grind the ore in Newfoundland and ship it direct to the user.

* * *

A report comes from West Bay, Cape Breton, that a valuable discovery of mica has been made in that vicinity. Indications of the mineral were observed there for some time by the owners of the property, and development was undertaken in a small way. Two American lady tourists, who have been visiting that district, have decided to go into the enterprise, supplying the necessary financial backing which was required. Development work is now going on, and the mineral is found to exist there in large quantities. One sample is described as being a foot square, and as transparent as glass.

* * *

A large quantity of brass, estimated to be worth $400, was seized by the Nova Scotia Steel & Coal Co. during last week. The brass was stolen from the company's plant and sold to a junk dealer at North Sydney. The company has taken legal proceedings.

* * *

Thomas A. Green, who for the past year has been the traveler in the Maritime Provinces for the Chas. Fawcett Mfg. Co., of Sackville, N.B., has severed his connection with that firm to accept the position of assistant manager of the A. C. Thompson & Co., Limited, of North Sydney. He is considered one of the best salesmen in his line on the road. The officers of the A. C. Thompson Co. are: A. C. Thompson, president and manager; Hiram Donkin, vice-president, and W. S. Thompson, secretary.

AN IMPORTANT NEW PROCESS.

The new iron process invented by Bosshardt, a German engineer, converts scrap wrought iron into malleable iron or steel at one operation. It is carried out in a special electric furnace, with the introduction of various substances into the molten metal during smelting. The castings made are claimed to have all the qualities of the best malleable iron, with great tensile strength and ductibility. It is claimed the finest tool steel can be produced by the same process at one melting. Another claim put forward on behalf of this process is that it is possible to cast various articles and parts of machinery that hitherto have had to be forged at great cost, and an important advantage is the delivery within a few hours instead of the wait of one to three weeks for converting cast-iron articles into malleable iron. Furnaces are already in operation in Germany, Holland, France, and Hungary.

CHANGEABLE TENSION DRILL.

IF one can judge from the comments of carpenters and other artisans, there is an assured future for the drill with changeable tension, now being manufactured by the North Bros. Mfg. Co., Philadelphia. They call it the Yankee Automatic Drill No. 44, and it has shown by performance the right to the name which has been associated with the first steps in screw-driver and drill progress.

Tension can be readily adapted to the work being done—made greater for hard woods or large drills; less for soft woods or small drills—by means of an adjustable spring. The mechanic pulls aside a small bolt head, turns cap at top of handle to right for more tension, to left for less, and, by allowing bolt to take its original position, holds spring at desired tension.

An improved method of arranging the magazine for drills makes all drills easily accessible, and protects their points.

This drill has been on the market only a single year, but during that time it has been tried and found not wanting. Even when it is handled by artisans of no more than ordinary intelligence, they are quick to grasp its utility, and can operate it easily. Endurance tests of months' hard usage have shown the spring to be in better condition than had it always worked at mean pressure as on other types of drills.

Frothingham & Workman, Limited, Montreal, are handling it for Canada, and are finding a large and increasing demand for it.

AID TO FIREPROOF CONSTRUCTION

IN accordance with their motto: "Find out what the people want, and make that," the Pedlar People of Oshawa, Ont., and Montreal, have embarked upon a new line, which bids fair to revolutionize the building trade of this country, by converting the interior construction of all classes of buildings, from the old style fire-trap, to what is claimed as an absolutely fireproof construction.

They are at present installing in their already extensive works a complete plant for the manufacture of sheet steel studding, angle strips, and furrings, which will be marketed in conjunction with the Perfect Expanded Steel Lathing. The steel studding will take the place of the wooden studding heretofore used, and placed at 12-inch centres.

There will be made any length up to 16 feet, to suit the height of the flat, and it will be from 1½ to 3 inches thick, thereby providing for a hollow partition from 3¼ to 4½ inches from face to face, after being plastered. Their T stud will be used to produce a solid fireproof partition, but 2 inches in thickness—merely sufficient for the thickness of an ordinary light door. These studs are also placed at 12 inch centres, secured at the floor and ceiling by sockets. The lathing is affixed to these studs and retained by a series of spuds, or teeth, punched out of the stud itself. It is then plastered, and when the plaster has set the contractor may then go into the next room and plaster on the key already made. The result will be a solid bed of plaster, with the expanded steel mesh in the centre.

This firm are also putting on the market channel irons, angle strips, and plasterers' corner plates. All the foregoing new products are fully explained in their new booklet, entitled, "Fireproof," which will be mailed to the subscribers of Hardware and Metal upon request. Further explanation of these goods will be made in the "Pedlar Talks," at present current in this paper.

QUEER FACTS ABOUT STEEL.

ALTHOUGH the steel and iron industry is one of the mightiest of the world and offers such rewards that some of the greatest chemists and other scientists study nothing else, there are lots of apparently simple puzzles about it that no one has been able to solve yet. The man who discovers the right answer to one or more of them may make $1,000,000 out of it.

Everyone who handles steel knows that it gets "tired" at times. After a piece of steel has been subjected to a severe strain for a certain period it may suddenly show a decided weakness. Then the experts say that it is tired; and so it is, for if it is allowed to rest a while it regains its old strength.

Recently it has been found that a steel beam can be made stronger by increasing the load on it gradually—in other words, by exercising it just as a man exercises his muscles when he wishes to make them stronger.

MR. HILL SCORES THE AMERICANS

MR. J. J. HILL, the great American railway man who is responsible for the progressive policy which built up the Western States, and who was born near Toronto, has been speaking frankly to his adopted countrymen on the Pacific coast on trade questions. He said the other day:

"The people who are banking on Oriental trade are bound to be disappointed. The United States cannot compete with foreign countries until we can manufacture products at a lower cost, which means cheaper labor. We have outgrown the present tariff laws.

"Great Britain furnishes the Orient half of its iron and steel, the United States less than one-tenth. The transportation rates are the same. We send only raw materials, such as iron, steel and raw cotton, a mere bagatelle. I will never build another ship in this country. The United States, unaccustomed to owning ships on the high seas, offers no encouragement to American bottoms. Kaiser William is the most active seeking agent in the world. The Chinese boycott has been the greatest commercial disaster America has ever suffered. If all other nations on earth closed their doors to American goods, it would not be half as bad as the Chinese exclusion alone.

"The American people are fools and vaingloriously patting themselves on the back over the so-called American invasion of European and Oriental markets, while the other countries, saying nothing, have practically monopolized the trades. As long as the people want politicians to make laws detrimental to the great commercial and industrial enterprises, the United States must expect to get along with a small share of the foreign trade."

NEW INDUSTRY FOR CANADA.

MR. WALTON, a well known member of the Iron and Steel Institute, of London, England, was a visitor in Toronto this week and being interviewed, said he considered the prospects of the iron, steel and kindred trades in Canada to be very good. "At present," Mr. Walton said, "a great deal of goods are sent into Canada from the United States and the Canadian manufacturers, in many lines, are in business, at the present time, solely by the consent of the trusts of the United States. This is especially applicable in the case of the manufacturers of iron and steel pipes, channels, girders, and other sections of merchant iron. Such a condition can only last for a short period. Continuing, he said he hoped to return to Canada early next Spring and put down tube works and make every class of tubes, including a process which is by far the cheapest production of iron and steel pipes and tubes of large sizes. At present there is no pipe over one inch butt weld produced in Canada. All the boiler flues and lap well pipes come from the United States. That means that Canada is sending abroad the money which should be spent at home to the great benefit of the labor and development of the great tract of land." The outlook in the piping business is especially bright just now owing to the discovery of natural gas in Western Ontario.

NEW LINE OF FURNACE PIPE.

A new company which has entered the furnace and stove trade is the Perfection Safety Furnace Pipe Company of Toronto. Premises have been secured at 3 Brookfield avenue, and furnace and pipe fittings will be manufactured and supplied to the trade throughout Canada. The lines to be produced have many points of merit which will commend themselves to the trade, and as the proprietors, Mr. A. H. Power and Mr. S. Ward, are both practical men of long experience in the stove business, Hardware and Metal looks forward to see this new firm grow and become an important factor in the trade before many years. Mr. Power was a traveling salesman and is well known to many of our readers, while Mr. Ward has had a close connection with the trade in Toronto. Attention is drawn to their advertisement in this issue and readers who desire further information can secure it by writing the firm, who offer to send circulars describing their new lines to any correspondent who mentions having seen the announcement in this paper.

LOADED SHELLS.

H. S. Howland & Sons have received a large shipment of Eley's Loaded Shells in both black and smokeless powders and are now ready to fill orders for these goods. Considerable difficulty has been experienced this season in securing delivery of shells from England, but the shipments now being received should do much to bring the stocks up to the proper requirements.

QUEBEC BUSINESS FAILURE.

Louis Giguere, hardware merchant of Quebec city, assigned on Wednesday of this week, with liabilities of $18,750 and assets of $18,700. Among the creditors ror large amounts are: Frothingham & Workman, Canada Radiator Co., Pilkington Bros., Paterson Mfg. Co., McDonald, Wilson & Co., James Robertson & Co., P. D. Dods & Co., Starke Hardware Co., Seybold, Sons & Co., Amiot, Lecours & Lariviere, and A. Prudhomme & Co., Canada Paint Co., all of Montreal.

A "free day" scheme is being worked by Australian hardware merchants. Customers are advised to save their purchase slips for an entire month as one of the days is to be a "free day," when all moneys received will be refunded. To determine which day this shall be, the numbers will be drawn by an independent person. The offer applies to everything the firm stocks, with the exception of galvanized iron, fencing wire, cement and white lead.

More Details about

The BUSINESS MAGAZINE

Our new home publication for the Busy Man and his Family.

Subscriptions are now coming in far in excess of our anticipations. When the first number appears, in the course of a few days, we anticipate having by far the largest subscription list of any new publication that was ever launched.

So far there have only been three refusals to our solicitations for subscriptions—a fact that speaks volumes for the confidence our patrons repose in us.

We believe our new publication will surpass the expectations of every subscriber. The reading matter selected covers a wide range of interest and no matter how narrow your taste you will be sure to discover one article at least to attract your attention. There will not be a dull page in the Magazine—everything is bright, readable and instructive.

During the past week every subscriber to Hardware and Metal has been offered a special inducement to subscribe to The Business Magazine. Remember, this offer only holds good until the first number is published. If you have not yet heard of the offer write in for full information at once.

To all others we can but repeat that the subscription price of The Business Magazine is $2.00 per annum. If you feel interested fill in the following form and forward to us :

PAINT, OIL AND BRUSH TRADES

THE MAKING OF PAINT.

IN the manufacture of ready-mixed paints a great amount of time and care is expended in the mere operation of mixing. It would seem as though the proper mixture of white pigments with linseed oil could be easily secured and was a very simple mechanical operation; however, the process is long and tedious, and requires the construction of a large amount of heavy and costly machinery.

The quality of a paint depends very largely upon the intimate mechanical mixture of the atoms of oil and pigments, and experience has proved that this can only be secured by many hours of manipulation in the various agitators and mills of a paint factory. In such a factory the operations commence on the top floors, and are carried on continuously in machines which are placed on the succeeding floors, the contents being finally gathered in storage tanks on the lowest floor.

The dry white pigments and the linseed oil first come into contact, in the proper proportions, in an apparatus known as a chaser, which works somewhat on the same principle as a common mortar wheel. Here they are worked up into a rather stiff paste, and when of the right consistency the mixture is dropped into a mill, built somewhat like an agitator, and again into two double mills and a final finishing mill. In passing through these machines the paint is ground to a remarkable fineness, and upon leaving the last mill it has the proper consistency for the brush.

The paint is then carried into long, horizontal steel reservoirs, inside of which are shafts which carry a number of steel propeller wheels, which serve as agitators. The thrust of the wheels is in the direction of the final outlet from the tanks, so that the fluid is driven in that direction. Below the storage tanks is a series of large cylindrical tanks, into which the white liquid is drawn in the quantities required. Here it is tinted by mixing certain invariable proportions of coloring pigments with it, each tank having its own color.

Constant agitation in these coloring tanks is necessary to keep the solid pigments from settling in the tanks, and it serves to keep the paint at the proper consistency. It is constantly agitated until drawn off in barrels for shipment. —Master Painter.

LEAD MINING AND TARIFF.

BRITISH COLUMBIA lead miners have made strong representations to the Tariff Commission that a continuance of Governmental assistance to lead mining is necessary, either in the form of the present bounty or in a higher protective duty against foreign lead, many of the speakers seeming to prefer the latter alternative.

Lead mining is the most important industry in the Nelson district, and now that a bounty and good prices in the lead market have combined to make the industry profitable, there has been a marked impetus and development on the hillsides. Whatever view the rest of Canada may take of the bounty system, there are no two opinions in British Columbia as to the wisdom of the lead bounty. It is claimed to have made the difference between success and failure in this district. In 1900 there were 31,870 tons of lead produced, in 1901 25,790 tons, but the product fell to 12,000 in 1902. The next year the bounty came into force, followed this year by the increase in the tariff on dry white lead and dry white lead ground in oils. The result is an increase by 500 per cent. in the production of lead ores, an equal increase in the number of operating mines producing ore containing lead, the erection of an additional lead smelter at Marysville, and an increase in the capacity of the lead refinery at Trail. The total production in the Kootenay of lead in ores for the year ending June 30 last amounted to 27,844 tons, as against 8,000 tons for the year immediately preceding the bounty. As the total consumption of lead in Canada is only 15,000 tons, it will be seen that the industry has reached an export trade basis.

During last year no less than 125 different properties in Kootenay shipped lead-bearing ores to the local smelters. The investment in the silver-lead mines of British Columbia is estimated at $20,000,000, while in railway and steamboat companies dependent on those mines and their incidental mining industries for their traffic, there is an investment estimated at $14,700,000. The smelters' investment for the same purpose is placed at $1,000,000. The wage expenditure is estimated at $1,900,000 for 1,500 men, most of which is again expended in the district, a great deal going for provisions and supplies brought from the prairies.

The lead miners contended that they were entitled to more protection than manufacturers, and that if a duty of 25 per cent. was imposed on lead pipe and other finished products the duty on pig lead should be at least 20 per cent. At present prices of lead the bounty amounts to about 20 per cent. protection, but under the sliding scale if the price went down the bounty would be increased, and amount to an ultimate protection of 45 per cent.

It was pointed out that last year Canada imported dry white lead to the value of $638,381, the miners contending that if the Canadian producers had the whole market they would have about $300,000 or $400,000 more than they have now.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, October 6, 1905.

WE understand that circulars have been issued by some of the paint manufacturers advancing liquid paints on an average of five to ten cents per gallon. That is to say, one gallon packages remain, for a time at least, at their present quotations, but half-gallon and quart packages have been advanced, the former five cents per gallon and the latter ten cents per gallon, over prevailing prices. These price amendments are owing to higher wages and enhanced values for zinc and turpentine.

Attention is drawn to a sharp advance in the price of shellac. The gum seems to be on the upward trend again, and values are steadily climbing.

Fall orders seem to be coming in freely, and several manufacturers report that there is enough business in sight to keep them energetically employed until Christmas.

As predicted in our last week's issue, turpentine has advanced and is now quoted at ninety-three cents. This is accounted for by the unsatisfactory condition of labor in the southern pine belt, and the fact that the weather there is unfavorable to the harvest. Receipts are very small for the season.

Turpentine—A scarcity in the supply has again sent prices up. We quote: Single barrel 93c. per gallon. Two barrels or over, 92c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—A large over-supply in the United States market has caused great unsteadiness in this country. During the past week, however, prices have remained firm, and we still give them as follows: Raw, one to four barrels, 45c.; 5 to 9 barrels, 44c.; boiled, 1 to 4 barrels, 48c.; 5 to 9 barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—Renewed activity in the primary market has only served to strengthen existing prices, which are as follows: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—An advance is already reported on foreign markets, but in spite of the continued strength of spelter, Canadian producers are holding to the following prices: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)— Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral — We give the the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—The price given below is very firm. Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—This article has been the subject of many advances lately and prices are now very firm as follows: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—The advance predicted by Hardware and Metal has at last occurred. The rising value of gum shellac hastened this move and we are now quoting: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Raw material for the production of mixed paints has been steadily advancing for some time. This has been especially true of ingot zinc and turpentine, so that we are now compelled to amend our prices slightly by adding 5c. to half-gallon, and 10c. to gallon packages. Prevailing prices are $1.20 to $1.40 per gallon.

Castor Oil—Good inquiries continue to come in and orders are being shipped freely at the following prices: 8 1-2c. to 9 1-2c., according to lots.

Refined Petroleum—Contrary to general expectations and in spite of the advance in crude oil, prevailing prices have undergone no change during the past week. The demand is good and the market remains exceptionally firm.

ONTARIO.

Office of HARDWARE AND METAL.
10 Front street east,
Toronto, October 6, 1905.

WINDOW glass and turpentine divide attention as the features of the market this week, window glass having made its long expected advance, the base price being $4.25 per 100 feet for star, and $6.25 per 100 feet for double diamond. Turpentine has continued its upward movement and is held very strong at $1.00 for barrel lots, while $1.05 and $1.10 are being asked for 10 gallon lots, this being an advance of from 5c. to 8c. over last week. Very little is being bought at these figures and buyers will hold off for better prices, but the strength of the market in the south is such as to lead one to believe

STOLL'S FLINTCOAT STAIN

(FLOOR FINISH)

An entirely new preparation for staining and finishing floors of every description. Stains and finishes at the same time. Dries hard over night. Makes a tough, durable, elastic surface; is not affected by hot or cold water; will not crack, mar or chip off. Fall Orders

The Canada Paint Company

desire to state that they are ready for some good, well assorted FALL ORDERS.

It is anticipated

that higher figures will take effect almost immediately, and if our clients desire to have their shipments before the Winter rates come into force, specifications should be placed in our hands without delay.

Order Now

and avoid the rush and risk of being late as is usual just before the increase in the freight tariff and the close of navigation.

Ample Stocks.

Every department is running to its utmost capacity.

Liquid Paint

customers are respectfully requested to forward their orders immediately.

THE CANADA PAINT COMPANY LT'D

that lower prices will not be quoted for some time.

Linseed oil continues at the low figure quoted last week, and in most cases the dealers handling English oil have met the prices named for the Canadian product. Some, however, claim to be be getting 48c. for English oil, while 46c. is the ruling figure for the oil from the Baden Mills. Calcutta seed is increasing in value and there is little likelihood of English oil being quoted lower than it is at present. The Canadian producers are buying large quantities of seed and intend crushing sufficient to supply the Canadian market.

An advance is expected in liquid paints, but jobbers still quote at the old figure. Shellac varnish is stronger but has not been advanced yet. Petroleum continues at the prices quoted last week. The volume of business is very large, owing to the expected advance, and the desire to increase stocks before navigation closes.

Business generally is reported to be good and no falling off is expected before the snow flies.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 46c.; boiled, 49c.; 5 to 9 barrels, raw, 45c.; boiled, 48c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel, $1; 10 gallon lots, $1.05 to $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Much business is being done at the old figures, shipments by boat being very large. We quote: Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c; 18 1-2c. ex warehouse.

Crude Petroleum—Prices are very firm and further advances are likely. We quote: Pennsylvania, $1.36; Ohio, 92c.; Canadian, $1.32.

Glass—An advance of from 40c. to 50c. has been made owing to the scarcity of supplies as outlined on another page. For revised figures see current market.

MONTREAL WINDOW GLASS.

Arrivals are still small and the condition reported for the last several weeks has changed but little. Several Canadian dealers are just now receiving orders which were placed back in January, and it is said that in many cases importers will have to wait for fully two years for shipment. The demand remains very brisk and consequently the figures we give are firmer than ever. There still exists in Belgium a very unsatisfactory relation between the glass manufacturers and their employes, and none of the mills are working full staffs. This will tend to keep down the quantities of glass being shipped to this country. We quote: as follows: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick. first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50 seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do. $28.50.

WALL PAPER IMPORTS.

IT is gratifying to note that the increase in the amount of wall papers imported from foreign countries during 1904-5 over those of 1903-4 is very small. Although the total amount of wall paper consumed during the past year has greatly increased over the consumption for the same length of time two years ago, the amount imported rose from $188,330 to $199,924, a very small amount, comparatively speaking. Even this increase is referable to the better quality of paper which is now being used by the Canadian buyer, for the total number of rolls has decreased from 2,553,701 in 1903-4 to 2,408,418 in 1904-5.

ARTICLE XVII.

THE KITCHEN BOILER.

KITCHEN boilers, though humble-looking devices, have a large share in providing the great measure of comfort enjoyed to-day in almost every home, and that being the case, and in order that the maximum of usefulness may be obtained from them, it is necessary that they should be properly connected to the water-front in the stove, or ring in the furnace, as the case may be.

In connecting a kitchen boiler several things must be taken into consideration, and among them is the fact that the pressure of the water lends absolutely no assistance in producing a circulation between the water-front and the boiler, and for that reason care must be taken in putting in these connections that they are properly graded, so that air may escape from the boiler, water-front and pipes through the cocks in the sink or elsewhere.

The plumber should also put in pipe connection of as large a size as possible,

Fig 2.

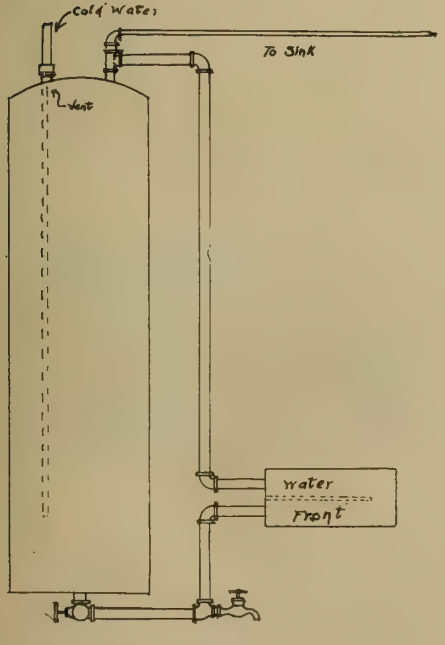

Fig 1.

and this for the ordinary size boiler is one inch in diameter, that being the size of the tapping in the side and heads of the boiler. The water-front is, however, usually tapped ¾-inch, which in the opinion of the writer is a mistake, the only remedy for which is for the plumber to put on ¾x1-inch elbows at the first turn and so increase to the size of the boiler.

The necessity for as large connections as possible are two-fold, first because they reduce friction, and secondly, and of more importance, because of the comparatively large amount of sediment which collects within them, and which, with the usual form of connection, cannot be removed without taking the pipes apart.

Figure 1 shows a connection which

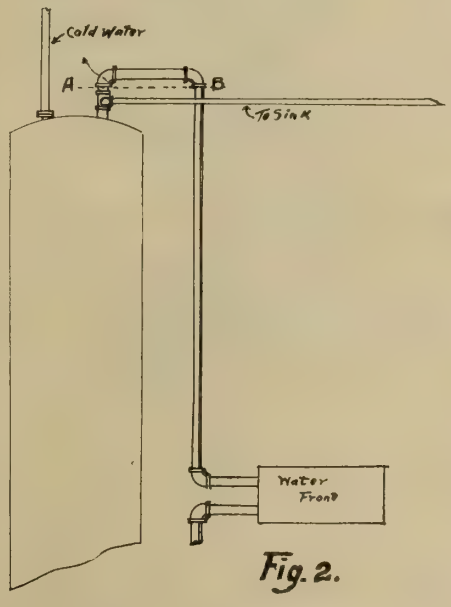

Fig. 2.

very largely overcomes the difficulties usually found with stove connections, and which is so far as possible a perfect connection in every way.

It will be noticed that the flow pipe from the top of the water-front enters the boiler at the top instead of at the side. The great advantage of this style of connection over that shown in figure 3 is that with the fire on for a short time only, a certain amount of very hot water may be obtained, because that which has been heated will remain at the top of the boiler, constantly getting hotter until it is drawn off, so that six, ten, fifteen inches or more of boiling water may be obtained without heating any more, as would be necessary in the case of figure 3, where the circulation, taking place between a point on the side of the boiler and the bottom thereof, causes all of the water which has been heated to pass up through the great volume of water between the inlet on the side of the boiler and the top, and thus necessitating the heating of nearly all the water in the boiler to a high temperature before any can be drawn.

Figure 1 also shows how the connection to the various cocks should be taken off, viz., from the highest point, so that, as was said before, all contained

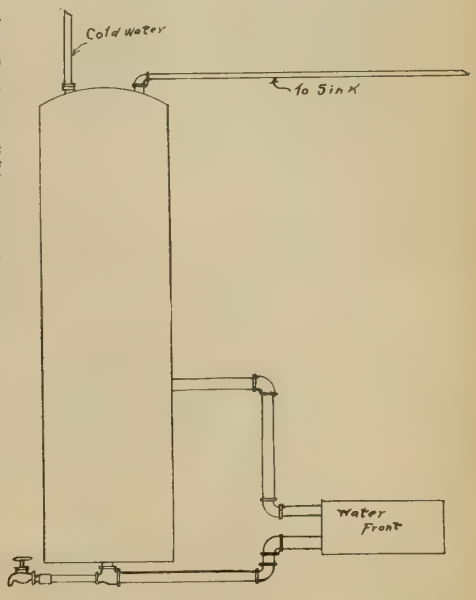

Fig 3

air may escape when any hot water cock is opened. In this respect figure 2 shows a connection which is incorrect and will cause a great deal of annoyance and trouble, for the reason that the air, which is sure to accumulate in that portion of the circulation pipe above the line "A-B," cannot be removed through the pipe "to sink," and will divide the stream, so that there will be a constant "pounding" or water-hammer as soon as the water in the water-front begins to form into steam.

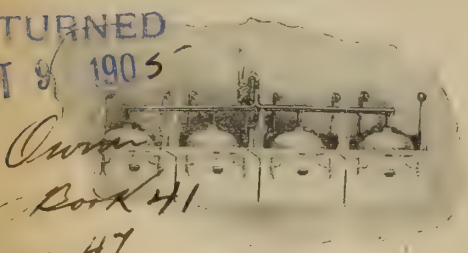

Figure 1 also shows how the cold water pipe should be carried to a low point in the boiler, so that the incoming cold water may not mix with the outgoing hot water at the top. It is necessary, however, to bore a small hole, say ⅛-inch in diameter, at the point marked "vent," so that if a stop and waste cock is closed off in the basement, it may not syphon out the water in the boiler.

The same figure also shows an angle valve placed on the return pipe immediately under the centre of the boiler, the object of which is that when blowing off the boiler, and having opened the draw-off cock for two or three minutes to allow the water to flow from the bottom of the boiler, from which point it will naturally come, because of least resistance, the angle valve may be closed, which action will compel the full force of the water to be driven from the top

of the boiler down through the waterfront, thereby insuring the proper cleaning out of the whole circulation system, after which the angle valve must be again opened so that a circulation may be established.

PLUMBING IN PUBLIC BUILDINGS.

A MARVELOUS advance has been made during the past quarter of a century in the sanitary equipments of such public institutions as hotels and schools, and in such industrial establishments as factories and warehouses. There was little to select from twenty-five years ago but the progress made since then has resulted in fixtures which now seem to be practically perfect. Even to-day in the outlying districts the plumbing arrangements are anything but what they should be, but the traveling public have it in their hands to compel hotels at least to adopt modern fixtures. A number of illustrations are reproduced in this article showing types of the latest fixtures manufactured by the Standard Sanitary Manufacturing Co. of Pittsburg, Pa.

Sectional Lavatories.

The general character of the sectional lavatory is shown in Figure 1, this pattern of lavatory being capable of being extended indefinitely. Each section, with the slab and bowl, is cast in one piece and arranged so that there can be no place for accumulations of any character. A sectional fixture adapted to a wider scope of usefulness is shown in Figure 2. The sink provided in this case can serve the double purpose of a lavatory and a sink. These goods are of iron selected and prepared so as to take on a white porcelain enamel of high gloss. The enamel construction is also designed so that the expansion and contraction attending the use of hot and cold water can have no effect on it, with the result that the fixtures may remain in use for long periods without cracks or crazing.

Fig. 2—Lavatories and Sink.

For factory purposes, constructed so that they can be placed in the middle of a room, along the sidewalls, in the corner of a room or around the corner of a room are so-called range wash sinks. Some sinks of this class are arranged to be supplied by faucets high enough so that the head and shoulders of the workmen can be thoroughly bathed with no little convenience and a degree of comfort approximating that of the shower bath.

Not less important than the facilities for washing in institutions is the necessity of providing a convenient supply of drinking water, and in Figure 3 is a sectional view of an artesian drinking fountain. This is finished in the same handsome white porcelain as those described and, being made of cast iron, is susceptible of hard usage without damage. As shown by the section, the supply pipe runs up through the centre to a mouthpiece which is thoroughly washed every time it is used, and the waste water overflows to the basin, from which it runs to the waste pipe and is carried off to the drainage system of a building. This fixture has been found particularly convenient in schools, and it has been demonstrated that a large number of children can satisfy their thirst in less time than by any of the other drinking conveniences which have been produced for public use.

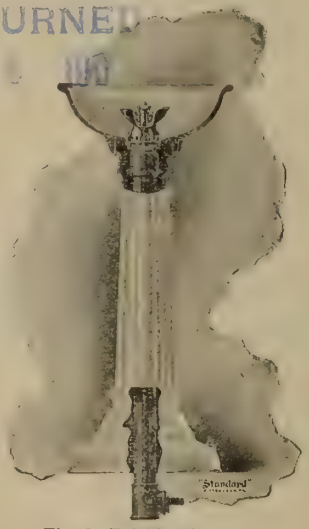

Fig. 3—Drinking Fountain.

The expense attending the equipment of public buildings with water closet facilities in the past resulted in many buildings being dependent on privies. The general disadvantage of such conveniences led to the production of dry closets, while their defects resulted in turn in the production of range water closets. The accepted type of range closet is now made in sections and is of the water closet type, so constructed that a range of them may be either set in compartments or left exposed in a row of stalls, each seat, however, independently connected with the main drain. The equipment as shown in Figure 6 provides for an automatic flushing, the flush tank being arranged at one end of the range and connected with the double trap on the discharge end, so that periodically a flushing of the contents of the range drain into the sewer is effected. Blue prints with instructions for erecting and operating are furnished by the company with each fixture, so that correct installation by the plumber may be made without risk as to the certainty of satisfactory action.

In Figure 7 are the plan and elevations of the Standard automatic siphon education public urinal, which can be furnished so that it can be approached from both sides, or so that it can be placed against the wall, according to the number to be accommodated. This fixture is arranged also to be automatically flushed periodically to insure cleanliness. The urinal troughs are made of cast iron coated with the same non-absorbent durable character of high gloss white porcelain enamel and some are made with lips at the front and all with provision for stalls for greater privacy.

Fig. 4—Sectional Fixture Equipment.

The appearance of the toilet room equipped with these sectional sanitary fixtures is presented in Figure 4, with the urinals at the left, the closets in the background, and two styles of sectional lavatories. One of the latter is supplied from overhead piping, so that the shower effect can be secured when desirable, and the other with the water supply lower down for washing purposes only.

A more pretentious toilet room is shown in Figure 5, this being provided with a sectional lavatory of more attractive appearance and with range closets fitted with stalls and with a compartment chamber locked for use say in school buildings for the teachers. The entire arrangement can of course be enclosed in similar compartments. A feature is the provision of a large ventilating pipe through which the entire toilet room is ventilated by drawing the air from the room through the different seats, and through a main trough or drain to the point where the ventilating pipes connect.

Fig. 5—Toilet Room Ventilated through Fixtures.

INVERTED BUSINESS POPULAR.

Inverted burners for incandescent gas lights are all the rage in Great Britain, and many very handsome designs of fixtures are being put on the market. The great advantage claimed is the absence of shadows and the throwing of the light downward instead of upward. The idea meets with general favor, but Canadian lighting dealers have not yet found a satisfactory burner for sale on the Canadian market.

FAIRBANKS STANDARD SCALES

Reason No. 1

WHY FAIRBANKS STANDARD SCALES ARE THE BEST MADE

All the Pig Iron entering into the construction of our scales is especially selected and tested by us in order to get the greatest strength and uniformity.

This means there are no weak parts in our Scales. No chances for flaws.

Reason No. 2

We employ only the highest grade of skilled labor in our factory, men whose fathers and grandfathers before them have been scale-makers. Each man has a particular part of a scale to make, and he makes that part only, consequently attaining a degree of exactness and perfection impossible to the man who does a little of everything.

THE CANADIAN FAIRBANKS CO., Limited,

Montreal Toronto Vancouver Winnipeg

LIGHTING SUBURBAN HOMES.

PROPER lighting of a suburban home involves not only a device which will give the greatest possible candle power, but also one which is convenient, safe and economical, writes George Somers in Light. The danger involved in the use of the ordinary kerosene lamp is second only to the bother which they cause. At the same time thousands of people hesitate to install any of the modern systems of lighting feasible in the country home because they do not fully understand them, and imagine that they are either very expensive or are dangerous.

Acetylene is a clever lighting agent for use in any country or surburban home, and a complete system may be installed at comparatively small expense.

Acetylene is one of the most economical illuminants which can be secured and the light furnished by acetylene is remarkable because of the fact that its spectrum is nearer to the spectrum of the sun than that of any other illuminant. All artificial lights entail a strain upon the eyesight, because of the difference in the quality of the light from that afforded by the sun, to which the eye is naturally adjusted, but this strain is lessened to a very large extent when acetylene is used, an advantage which is of no little importance in these days, when eye troubles are so common. This peculiar quality of the acetylene light makes it an excellent illuminating medium to use when delicate fabrics, paintings and flowers are to be exhibited at night. It is a very diffusive light, reaching the farthest corner of a room.

The principle involved in the use of acetylene is simple. A piece of calcium carbide, a product of the electric furnace, is dropped into water or water is dropped upon it when it almost immediately decomposes and unites with its oxygen, the carbon and hydrogen forming a union by which acetylene is generated.

An acetylene plant sufficiently large for the needs of the ordinary country home will occupy but comparatively little space and may be located in the cellar if desired. It is a common plan, however, to place the generator in a pit out of doors. If a house has been piped during its construction, very little time or labor will be required to install an acetylene plant. Few connections will be required and standard fittings can be used.

Once in position an acetylene plant requires but little attention. At intervals, which vary according to the amount of gas burned, it is necessary to fill the carbide holder at the top of the machine with carbide, which comes in cans ready for use, and to fill the generating tank with water. No further attention is necessary until the carbide is exhausted, except that when charging the residuum of the carbide must be drawn from the generating tank. As this is lime, it can be used in making whitewash or on the land to sweeten the soil.

Much has been said and written about the danger of acetylene which is mythical. The gas generated by carbide is not poisonous to the human system; it will not cause asphyxiation, even though it is allowed to escape into a sleeping room throughout the night. It is explosive, however, just as any other gas is, and in the same way. There would be decided danger in taking a lighted lamp into a room where any illuminating gas had been escaping, or in lighting a match in the cellar where a generator is located, when something had been allowed to interfere with the system.

The water in the generating tank must not be allowed to freeze. Acetylene itself is dry and will not freeze, and, if desired, may be piped to the dwelling from pit or generator house on top of the ground.

In speaking of the possible accidents, one point should be emphasized strongly. The cans in which the carbide is shipped must be kept absolutely free from dampness. Otherwise the contents will follow a natural tendency, and begin to slack. The formation of gas will be the result, and, being confined, this gas will explode. This is a danger that must be guarded against, and the simple precaution of keeping the cans in a dry place will obviate any trouble.

As the capacity of the generators vary greatly, so does the cost of the machines. None but those approved by the Board of Fire Underwriters should be considered. They have been tested. A generator that will operate eight or ten lights can be purchased at a very reasonable price. If the house is piped for gas, there will be little extra expense; if not, it will be necessary to allow for piping, and the expense of installing.

METHODS OF ARTIFICIAL DRAFT.

"ARTIFICIAL draft may be, and has been, produced by means of steam jets inducing a flow of air, by blowing engines, by air compressors, by positive rotary blowers and by fan blowers or exhausters. Although the practical success of the locomotive is largely due to Stephenson's introduction of the steam nozzle for draft production, it does not follow that the same method is applicable where the exhaust steam would not otherwise be wasted. The blowing engine, the air compresser and the rotary positive blast blower, all possess disadvantages which render undesirable their adoption for this purpose. In fact, they have been introduced to only a very limited extent. The centrifugal fan has, however, been most extensively applied under all conceivable conditions, until it has become the symbol of artificial, or, as it may properly be designated, of mechanical draft, and is to-day the accepted substitute for the chimney."—From treatise on Mechanical Draft published by the B. F. Sturtevant Co., of Boston, Mass.

MOVING AIR.

THE problems involved in the transportation or movement of fluids, differ essentially from those concerned with the conveyance of solid materials. In the case of the latter the process is one of actual carrying, while in the former the movement results from, and is proportional to, the pressure difference existing between the delivery and receiving points.

The solid is actually carried in bulk, while the fluid, as its name suggests, merely flows toward the point of least resistance. In other words, the transportation of fluids, of which air and water are the most familiar and plentiful examples, results from the creation of a difference in pressure.

A portable receptacle is usually required for the latter, while a conduit is necessary for the passage of the former.

A very comprehensive discussion of the subject is presented in the exhaustive treatise on "Mechanical Draft," published by the B. F. Sturtevant Co., of Boston, Mass.

PLUMBING GOSSIP.

Geo. Larose, tinsmith, of Beloeil, called on the supply houses in Montreal this week.

Eusebe Monbleau, steamfitter and machinist, of St. Johns, was in Montreal a few days ago.

E. Guillet, of E. Guillet, Sons & Co., Limited, Marieville, was in Montreal during the week.

Ph. Gaudette, of the water works, St. Ours, called on the Montreal wholesale houses this week.

Alex. Lalonde, tinsmith, of Alexandria, Ont., was purchsing supplies in Montreal this week.

T. G. McClatchie, tinsmith, of Hemmingford, was among the outside business men in the Royal City this week.

W. Gaulin, tinsmith and plumber, of St. Cesaire, paid a visit to Montreal this week, in connection with his business.

Mr. Tanguay, of Tanguay & Mayrand, plumbers and tinsmiths, of St. Johns, Que., visited the Montreal supply houses this week.

A large addition is being made to the Fort Frances Hotel, owned by J. Paul. A steam heating plant will be installed and the building will be lighted by electricity.

The Ontario Lead & Wire Co., Toronto, are now represented in Manitoba and the Northwest by Mr. W. F. Brock, manufacturers' agent, with headquarters at Winnipeg.

Oil bubbling up from the river bottom at Brockville is said to indicate the presence of natural gas, and it is possible that the developments made in Western Ontario in supplying this fuel for heating and lighting may be duplicated in the St. Lawrence River district later on.

Jas. F. Read, formerly in business with his father as plumbers and steamfitters, at Smith's Falls, was released this week from Toronto jail, he having been in prison for the last seven months for debt. Read gave a creditor, M. W. Everett, notes amounting to $659, but was arrested because Everett swore that he believed Read intended to leave the country without paying the account. Read was a veteran of the South African War.

The Standard Sanitary Mfg. Co. will erect several buildings on a site recently acquired by it in Detroit. The main building will be 63 x 290 feet, and three storeys high, the power building will be 42 x 95 feet, two storeys high; the engine room 40 x 40 feet, and the foundry building 63 x 73 feet. The pattern, storage and other buildings will cover a space of about 125 x 90 feet. The power building will be equipped with a 500 h.p. Corliss engine, all necessary pumps, heaters, dynamos and generators, and will have a battery of four boilers.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 6, 190 5.

INTEREST in the local plumbing market this week centres in the strengthened tone of iron pipe and fittings. General advances in pig iron and finished material in the United States and England, where great orders are being placed, make Montreal manufacturers and jobbers predict an early withdrawal of the present quotations. The demand, which has held so strong throughout the Summer season, shows no sign of abatement, but rather is increasing.

Lead is again on the advance, after having experienced a temporary dullness early in the week. This has given a very firm tone to lead pipe, which is well held at the prices quoted below.

Copper is also on the upward move again, with the result that brass goods are even steadier than before and copper boilers also reflect the strength of the primary market.

The advancing season is, of course, bringing with it a great many heating contracts, and most of the local plumbers have their hands full with this class of business. Plumbing jobs are not lacking either, so that the trade here are kept continually busy.

Range Boilers—Sales are large. Prices are all very firm, especially for copper boilers. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The strength of pig iron is holding this market firm. Our quotations are as follows: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

Iron Pipe Fittings—Reports from England and the United States show that there is great activity in the iron and steel markets. This, added to a large demand here, makes it reasonably certain that prices will soon go up in this article. Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Manufacturers assert that present figures cannot hold much longer, in view of the advances in pig iron and finished material. There has been no letup in inquiries, a fact which has assisted in giving to the whole market a stronger tone. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.: 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—Prices are well held as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—The market shows considerable strength, but there is no disposition to raise prices just now in spite of the fact that tin and lead are high. We quote: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Octo'er 6, 1905.

BUSINESS continues exceptionally brisk both in plumbing supplies and heating goods, many of the supply houses finding it necessary to work their staffs at night in order to secure shipment of the orders in hand. A very large volume of business is being done in the west. Carload orders are being shipped almost daily to this district. From all parts of Ontario also orders are coming in very satisfactorily. September was one of the largest months in the history of the local supply houses, each house reporting an increase of several thousand dollars worth of business over any previous year. In plumbing supplies the bulk of the orders are given for finishing goods, although roughing-in requirements are still being included in fair amounts.

Increases in prices are looked for in most lines at an early date, owing to the great strength being shown in the metal markets. Iron pipe and fittings and both iron and copper range boilers are likely to advance, while the increasing price of raw material will also warrant an advance being made on enamelled ware. The looked for jump in brass goods cannot be much longer delayed, as while the old prices still rule manufacturers have withdrawn their quotations and are selling subject to an advance at any time. The strong conditions of the lead market also indicates that lead pipe will advance about an equal proportion to other lines listed. Last week's quotations remain unchanged.

Lead Pipe—Prices are very firm and there is a possibility of an advance. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—The recent scarcity of goods is not as apparent. The manufacturers are able to ship in larger quantities. Demand is active and prices steady. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—There is a strong demand for both iron pipe and fittings, and while stocks are not so large as they should be, manufacturers are able to hold the business in their hands. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper and Range Boilers—A large business is being done, the discount remaining at 15 per cent.

Galvanized Iron Range Boilers—Large sales are reported owing to the completion of contracts in dwelling houses. Prices continue strong. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—The high price of pig iron indicates an advance soon. Business is very active and prices firm. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 1-2 inch, $15.75; 3 in. $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—A fair demand exists and the firmness in the lead market prevents any decrease in price. Our quotations are as follows: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware—A tremendous volume of business is being done owing to the demand caused by contractors finishing work on houses which have been under construction. The Canadian producers are well able, however, to handle the orders being received. Prices continue unchanged. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality,

A PERMANENT and Handsome Roof.

SERVICEABLE NOVELTY.

One of the best and most serviceable novelties yet introduced to be used in connection with gas lighting is the "Twentieth Century White Flame," for which Walter Grose, Montreal, is the sales agent for the Dominion. The editor of Hardware and Metal has given one a personal trial, and has no hesitation in recommending the novelty as one which will sell rapidly wherever introduced, and every customer will aid in selling by recommending the fixture to his friends.

The light attaches to an ordinary gas fixture, and besides throwing out heat sufficient to warm one or two fair-sized rooms lights the room better than the regular gas tip, without burning any more gas. The selling qualities of this light can be seen at a glance, and dealers who want to make a quick turnover should place an order at once, as the cool evenings between seasons are the time when the most sales can be made.

ELECTRICAL NEWS.

Thomas A. Edison announces that he has completed a new storage battery for automobiles that greatly simplifies the problem. He has been experimenting a long time, and announces that he has found just the right type of battery, that he has tried it on a number of vehicles, even to a two-ton car which he ran 33 miles an hour over rough roads, and has met with perlect success. It is one-half lighter than any battery ever made, and the cost is said to be only 58 per cent. of that of horses.

The town of Drummondville, Que., are calling for tenders for the installation of a water and electric light plant.

The contract for the supply of electrical machinery for street lighting purposes has been awarded by the city of Victoria, B.C., to the Hinton Electric Co. The plant is to be of the Canadian General Electric manufacture.

CANADIAN WARE IN DEMAND.

Mr. A. D. McArthur, Toronto representative of the Standard Ideal Co., states that never in the history of the business have orders been so large and the call for Canadian ware been so great. The factory is working to its utmost limit in an endeavor to keep up with the orders in hand, and while shipments are being kept well up to date it is only by the hardest kind of work. The general satisfaction with which the Standard Ideal goods are received, and the tremendous demand for them amongst plumbers in all parts of the country, speaks well for this growing Canadian industry.

HEAT LOST BY RADIATION.

The amount of heat lost by radiation from bare pipes containing steam at 100 pounds pressure has been estimated to be equal to two tons of coal a year for each 10 square feet of pipe surface. It has also been found that 88 per cent. of this loss can be saved by the best pipe covering.

STEAM PIPE

WE'RE READY for your Fall pipe order. We want it and have good reasons why it should come our way.

We know our product will give the user thorough satisfaction. It is made with that object and can be depended upon.

WALKERVILLE - ONTARIO

STEAM JET VS FAN BLOWER.

Careful experiments conducted some years ago at the New York Navy Yard, to determine the best form of steam jet for producing forced draft in launch boilers, showed that from 8.3 to 21.2 per cent. of the steam produced by the boiler was consumed by the jet. In a jet which had a hole only one-sixteenth inch in diameter, and which was the most economical of all, the steam used was one pound in two minutes. The amount of steam required by a fan blower is under ordinary conditions from a fraction of 1 per cent. up to a possible maximum of 3 or 4 per cent. in small boiler plants or with uneconomical apparatus; and practically the whole of this expenditure of power, in the form of exhaust steam, may be subsequently utilized for heating or similar purposes.

The case of a steam jet may be briefly summarized thus: It has the advantage of costing very little to put in and keep in repair. Its disadvantages are: First, it requires a very large amount of steam to run it; second, it introduces a large amount of water or steam, all of which has to be heated and carried up chimney; third, unless very carefully managed there is a large development of carbonic oxide, hydrogen and marsh gas, due to dissociation of the water, which has a tendency to carry off a great deal of heat in the stack; fourth, the intensity of draft producable by this means is distinctly limited; and, fifth, and by no means least, the noise incident to its use is at times almost intolerable.

The late Mr. Eckley B. Coxe thus expressed himself: "The fan is most expensive to install, and may cost more to keep in order, but where the arrangements can be made to utilize the heat in the stack gases it is more economical so far as heat units are concerned. It has one great advantage, it is possible to at all times obtain the exact blast necessary to produce the best results in the furnace, which is very important.

SYSTEM IN BUSINESS.

H. MUELLER MANUFACTURING COMPANY, Decatur, Ill., are to be commended for the systematic method used by them in conducting the correspondence of their advertising and business departments. This firm recently placed an order for advertising in Hardware and Metal, the order to cover fifty-two weekly insertions each year. This will necessitate one or more letters being sent to the paper by the Mueller Company each week, so in order to prevent any of their letters going astray through the mistakes of employes, they have had printed a sufficient number of envelopes to cover the correspondence, the envelopes being plainly printed in red ink addressed to Hardware and Metal, Printing Department, 10 Front street east, Toronto Canada, together with the words "Rush, advertisement department copy and proofs." In addition to this there is, of course, the ordinary address of the sender and the announcement on the back that the company is in business to sell water, gas, and plumbing goods, the postal department being requested to return the envelope if not delivered in five days.

By going to the expense of having 50 or 100 envelopes printed for each of the firm's correspondents it is clear that the system in use in the Mueller Co. offices is most comprehensive. Another instance of this is the manner in which the Mueller Co. forward the engravings used in their advertisements. A letter is sent ahead containing the announcement that one or more engravings have been forwarded, the description of these being contained on the invoice enclosed. The publishers are requested to note the charge made for duty, etc., and to enter this on the monthly statement for advertising forwarded to the advertisers.

System is the order of the day and the saving made through the systematic conducting of every branch of business is more than sufficient to cover all expense incurred in purchasing card index systems, doing necessary printing, etc., and employes of companies who are systematic do more valuable service than those who work in a haphazard manner. In the keeping of records also a firm is safeguarded against any contingency which may necessitate the taking over of work by a new employe at any time. Looked at from every standpoint system is an advantage to all business concerns and the ones who have not adopted it as yet are not doing business on twentieth century methods.

BOOK REVIEW.

THE Sanitation of a Country House, by Dr. Harvey B. Bashore. Published by John Wiley & Sons, New York. Price $1.00. The aim of this work, as stated in the preface, is to make the country as healthy as the city. It is true that summer resorts sometimes bring sickness instead of health; that there are rural localities which have more typhoid fever per population than our great cities; and Dr. Bashore declares that it is from the country that the cities get twenty-five per cent. of their typhoid cases. His contribution to the prevention of this state of affairs is addressed to both persons who build in the country for permanent residence, and to summer visitors and campers. To the latter he gives warning chiefly about water supply and disposal of wastes. "The price of pure water, wherever you go, is everlasting and unremitting vigilance," and his advice for open water supply, by streams, is "to see the other end to its 'uttermost parts'." For the use of springs and wells the same consideration must be applied to the geographical strata through which the water comes, but he gives no rules to make this easy. If it is necessary to take water from a suspicious stream, he recommends the plan practiced by the natives of India, who dig little holes in the sand of the shore until they get below the water level, and so, when the holes fill with water, get water which has filtered through the sand and is safer than the raw water of the stream.

The matter of waste disposal at summer camps is a matter which is within command, and Dr. Bashore's directions are good and easily followed. The book is not long and its matter will not be new to persons having a good knowledge of sanitation, but the points to be considered are brought together in a manner that has the merit of being very readable.

OXFORD HOT WATER HEATING SYSTEM

It Pays. Dealers can make both money and friends by recommending and installing Oxford system. Our sixty years reputation for producing the best is behind you if you are pushing Oxfor d lines. Every system installed is satisfactory, and you get the credit for it.

Important Improvements. As a practical man, the points of superiority of the Oxford Boiler must be very plain to you. The overhanging fire-pot, the walls of which incline inward over the fire, so that the heat strikes against them (instead of passing by as in a straight wall) is the greatest practical improvement in Boiler Construction made in years. It is not a theory but a proven fact that this simple change increases the heating capacity of the Boiler very greatly. We have repeated this principle in the first water section nearest the fire, still further improving the efficiency of the whole as a heating apparatus.

Other Points. The metal to metal connections made with Oxford Steel Push Nipples, doing away with gaskets or washers, the Triangular Revolving Grate and large ash-pit, are a few other important features.

Oxford Hot Water and Steam Radiators

used with Oxford Boilers give universal satisfaction as perfect distributors of heat—leaks are impossible, as every connection is metal to metal, made with the Oxford Steel Push Nipple—no gaskets or washers.

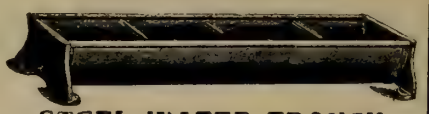
FIRST STEAM WARMING.

THE first practical application of steam for heating purposes was made by James Watt. In the Winter of 1784-85 he used steam for warming his study. The apartment was eighteen feet long, fourteen feet wide, and eight and one-half feet high. The apparatus was a box or heater made of two side plates of tinned iron, about three and one-half feet long and two and one-half feet wide, kept at the distance of an inch apart by stays, and joined round the edges by other tin plates. This box was placed on its edge near the floor of the room, and furnished with a cock to let out the air, and a pipe which proceeded from the lower edge of the box to a boiler in an under apartment supplied steam and returned the water of condensation. The effect produced by this apparatus was less than Mr. Watt expected, but the failure could not be explained until Leslie made his experiments on the heat transmitted by polished surfaces.

About 1800, Mr. Lee, of Manchester, under the direction of Messrs. Boulton and Watt, erected a heating apparatus of cast-iron pipes, which served also as supports to the floor, and was, in point of materials used and construction, the earliest of its kind. He subsequently heated his house by steam, and the



First Steam Warming.

staircase, hall, and passages were warmed by the ingenious apparatus shown in Figure A, placed in the understory.

The vertical cast-iron cylinder, A, is surrounded by a casing of brickwork leaving a space, EE, of two and one-half inches all round, and having openings, 1, below, to admit the air. This casing is surrounded at the distance of three or four inches with another wall, which forms what may be called the well, C. The coldest air, being the heaviest, falls to the bottom of the well, C, and entering by the holes, 1, into the space, E, comes in contact with the cylinder, A, where being heated and becoming specifically lighter, it ascends. There is a valve to regulate the admission of steam into the cylinder, and a small pipe to allow the air to be expelled when the steam is entering, that are not seen in the figure, and another small pipe to withdraw the water of condensation. Another valve is placed on the top of the brickwork to regulate the transmission of the heated air. When this apparatus was in action, the staircase soon became so warm that it was necessary to shut off either the valve admitting the steam, or the air valve.

And the maximum profit is in store for the merchant who seizes the opportunity and orders.
We would like you to write for prices, etc.
Will you do it?

ALEX. McARTHUR & CO., Limited, MONTREAL

82 McGILL STREET

CURRENT MARKET QUOTATIONS.

Oct. 6, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

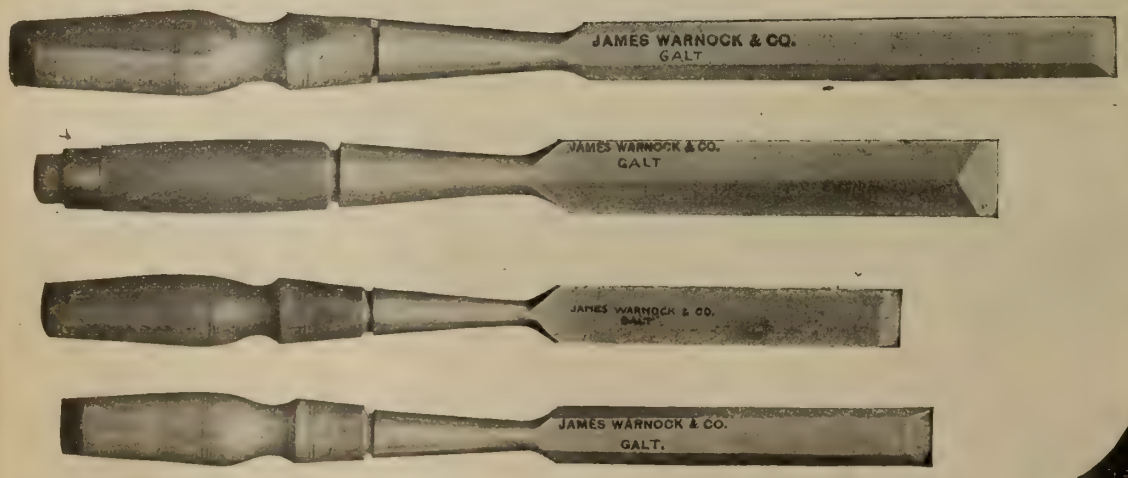
The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

Cloth bound, Price, postpaid **$1.00**

The American Hardware Store

A Manual of Approved Methods of Arranging and Displaying Hardware.

By R. R. WILLIAMS, Hardware Editor of the IRON AGE.



This book is descriptive of the best methods of accommodating and displaying the large variety of goods which are carried in stock in representative American and Canadian hardware stores. Copiously illustrated, and worth many times its cost to every progressive hardware dealer.

Cloth bound, 6¾ x 9¼, 576 pages. Price, postpaid. **$3.00**

Now Come the Sales

LESSON I.

When **DILLON HINGE-STAY FENCE** gets as far as your store you have, of course, to gain your customers' trust as we have gained yours—in other words, sell the goods. But you will only buy the "Dillon" because you believe in it and its preponderance of good points. These good points must ever be kept to the front in selling **DILLON HINGE-STAY FENCE**; so, first, copy them from the ads., starting from Sept. 2, 1905, on to a large card, attach it to a portion of the fence and place it in the window. Enquirers will read, then ask. **You can prove.**

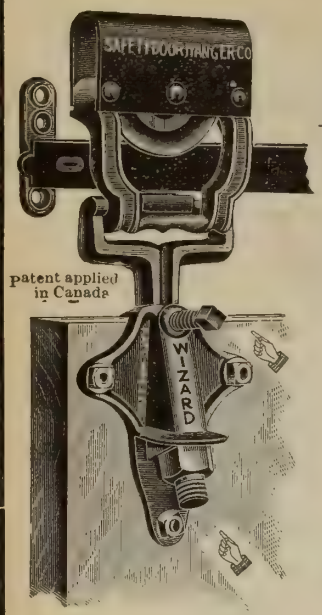
"Alberta National Hot Blast"

For all kinds of Coal

THE double heater in the Alberta is made of one piece of stamped steel securely rivetted to body. The flue around the fire-pot is gas-tight. An entirely new way of hanging the fire-pot does away with the usual legs. A patent has been applied for on all the above features, so that our customers will have exclusive control.

No smoke when firing up. The swing top is provided with a cover for the kettle. The hot blast draft enters through feed door and allows the hot air to be spread over the top of the fire, burning the gases.

We are fitting up the Alberta this year with duplex grates and annular shaking ring. These can be taken out in pieces without removing the fire-pot.



The fire-pots also have been made nearly straight, giving larger capacity and less trouble from holding up the clinkers and ash.

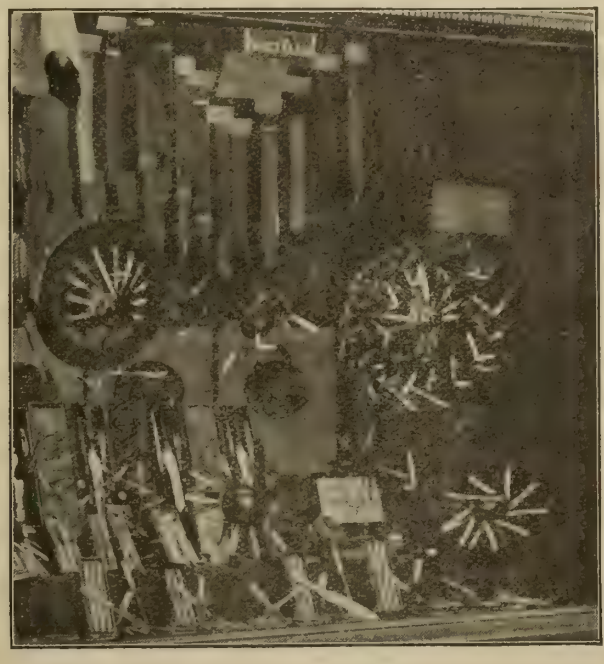
THE HISTORY OF CUTLERY

THE use of knives dates from the earliest times, and begins with primeval man, who rubbed flint flakes until a sharp edge was obtained, thus forming a knife. So right through the ages of man's existence upon this earth—many thousands of years in point of time—a steady development in the manufacture of knives has been going on.

In early records knives and swords are intermixed, pointing to the offensive and defensive purposes for which knives were made. Indeed, the term "cutlery," says the Ironmonger's Chronicle, applies to edge knives of various forms and shapes, many of which were used, concurrently, for warlike and peaceful purposes. Cutlery denotes knives, scissors, razors, and any other sharp-edged cutting instruments. The process of evolution from the flint and stone celts to knives of iron and steel included in its march bronze knives and copper swords and, incidentally, bronze reaping-hooks and other articles of husbandry. This development has been steadily going on until the present time.

Homer says the knives carried at the girdle in his day were of triangular form. Many of the knives found in British barrows have long, narrow blades, others again are broad and of dagger form. Both Normans and Anglo-Saxons carried about with them a met-soex, or eating-knife. King Athelstan left his knife on the altar of Beverley Minster as a pledge for his redemption of a vow of benefaction. Up to the end of the fifteenth century knives do not appear to have been used much at table, but as every one carried a knife at his girdle possibly it served to cut meat with in common with many other uses. Meat knives of Queen Elizabeth's day had handles of white bone with jewels set in them, thus being antitypes of the bone-handled table cutlery of later days.

Spring shears of Roman form were the only kinds of cutlery known with springs up to Norman times. Of course spring pocket-knives are, comparatively, a modern invention, but previous to their introduction "jack" knives, which shut into a groove or handle without any spring or lock, were made. The manufacture of metallic knives in England was doubtless at first isolated, and confined to those village smiths who were cleverer than some of their neighbors. As time went on "cutlers," as makers of cutting weapons and tools were called, banded together in large centres for mutual protection, and later were granted special charters in the manner customary in those days when guilds of traders were no sinecures, and when power to deal with commercial matters was needed, the law courts of the period not being competent to understand trade disputes.



The arms of the cutlers of London were granted by Thomas Holme, Clarencieux Knight of Arms, in the sixteenth year of the reign of King Edward IV., and later cutlers were granted a crest which consisted of an elephant bearing a castle.

Knives have been made in England for many centuries, but in the early days they were coarse, rough and crude. As time went on British cutlers advanced in the knowledge of their craft, and when James I. sat upon the throne of Great Britain it was generally acknowledged that the finest and best knives in the world were made in London. It is said that Richard Matthew, whose workshop was at Fleet Bridge, was the first Englishman who attained any great skill in making fine knives. During the reign of Elizabeth he obtained a prohibition against all strangers, preventing them from bringing any knives into England from beyond the seas (at that time the great place for making cutlery was Flanders.) The same Richard Matthew also obtained a patent from Queen Elizabeth for making knives and daggers with a new kind of handle, but complaints were lodged against him by other cutlers in the city of London, it being urged that the prices charged were prejudicial to Her Majesty's subjects.

In the London Hall of the Cutlers' Company there is an ancient picture of a cutler named Crawthorne, who gave certain charitable bequests to the cutlers of London in trust. The London Company of Cutlers were divided into three sections, namely, those who were smiths and forged blades, and consequently they were known as Bladers; the men who made hafts for the bladers, who were known as Haftmakers; and lastly, the Sheathmakers, who made the sheaths for knives, swords and daggers. In the reign of Henry VI. these three companies were incorporated in the one fraternity, under the name of the Cutlers' Company.

Sheffield has long been associated with the manufacture of cutlery, and in 1565 it is recorded that at a Court of the Rolls of the Manor of Sheffield a jury of cutlers was impannelled "to assign marks to the different manufacturers, whereby their respective knives could be identified." In 1624 the Sheffield cutlers, who had been protected hitherto by the Lords of Hallamshire, received an Act of Incorporation "for the good order and government of the makers of knives, sickles, shears, scissors and other cutlery ware." In 1638 a hall was built in which they could transact business, and the "Feast," still given annually by the Master Cutler on his official appointment, was inaugurated. The trade marks granted mostly belong to one of three classes: (1) one or more letters, as IXL; (2) single words, as names of persons or places, such as Carver, China, etc.; (3) designs, as a dagger, a cross, or an anchor.

The commencement of the manufac-

Window Display of Cutlery.

ture of knives with springs in Sheffield is attributed to the seventeenth century, but, as a matter of fact, very few knives with spring blades were manufactured before the close of the eighteenth century. One of the earliest references to Sheffield cutlery occurs in Chaucer, in which it is said, "Sheffield thwitel bare he in his hose."

Dr. Johnson asserts that knives as table appointments were not introduced in Scotland before the Revolution. Before that period every man had a knife of his own as a companion to his dirk or dagger. The men cut the meat in small portions for the women, who put them into their mouths with their fingers; the use of forks at table was then considered a superfluous luxury, and in Scotland was forbidden to the Covenanters by the decrees of their church. Princes and nobles carried knives at all times, substituting in later days swords. Spenser, in his "Faerie Queene," uses the word "knife" for a sword—"And after all his war to rest his wearie knife." Shakespeare, in the old quarto of 1597, makes Juliet wear a knife at the friar's cell. In the South Kensington Museum the dagger mark is to be seen on six of a set of fourteen knives, which have handles of ivory carved with portrait figures representing English sovereigns, all of which, with the exception of Edward V., are represented with jewelled crowns. Nine of these figures are shown with swords, four of them holding a sceptre in the right hand. On thirteen of the knives there is another stamped mark, which may be described as a diamond, joined at one point to a trident. The knives are of English make, and bear date 1607.

Although the manufacture of knives had been carried on for some time previously, it was not until 1820, when the first Lord Wharncliffe introduced his famous blade, that spring pocket-knives came into common use and were carried regularly in the pocket. The Wharncliffe blade had a long term of popularity, and is still sold in some localities.

To return to the practical side of cutlery, as far as it relates to knives, it is surely unnecessary to remind hardwaremen what kind of knives are sold at the present day, nor yet to relate the various types in common use. Table knives have blades of different shapes, and handles of various materials and different hues. Pocket knives have gone through many revolutions, and both large and small examples of cutlery have been produced. Knives with hundreds of blades and curious fittings have been made up, showing to what perfection the cutler's art has reached.

The manufacture of cutlery is no longer confined to Sheffield and London, indeed the exclusive production has long passed from Great Britain. The great works at Solingen show how Germany has cultivated the industry, and Americans know that the fame of the cutler has crossed the Atlantic. Nevertheless British manufacturers may take heart, for Sheffield still leads the van, and by far the greater quantity of cutlery sold by ironmongers in this country is made there.

Display of Cutlery.

A very neat window can be dressed with cutlery, the brightness of the blades and the variety of the goods allowing the dresser much latitude in his endeavor to make the window attractive. In the window shown in the accompanying illustration several methods of showing knives and razors are shown, the stands being made of wire and plush covered wood. The circles of blades attract the attention of passers by and bring trade to the store. With a little more labor wire strands can be strung across the window and knives of all sizes hung to the wire support.

Carving sets and other case goods can be arranged attractively on shelving or platforms in the window, while oilstones and other sundries can fill up the odd spaces and corners. As shown in the cut the hanging of strops from the ceiling relieves the vacancy too often found at the top of otherwise well-dressed windows. The show cases supplied by razor manufacturers can also be used to advantage in arranging the display.

KNIFE BLADES

The public appear to be developing an instinct of criticism as to the relative durability of knife blades, says the Hardwareman. People often wonder how it is there is such a marked difference in the price of knives that apparently to the uninitiated look the same. Hitherto they have accepted the fact that the difference is there in some occult form which is beyond ordinary comprehension, contenting themselves with bending them as a sort of test, but now with the march of the times they require to be informed on the point. The cheap knife is, of course, a machine-made article, while the higher priced domestic implement is hand-forged—a fact which considerably enhances the cost. Anyone seeing a pile of either in the rough form before being buffed would hardly believe that they could ever be made bright and attractive as they appear when purchased in the paper wrapper in their finished state. The same applies to silver goods before burnishing, the finishing process making all the difference between apparently old lumber and artistically finished goods.

SPORTING GOODS MAKE TRADE.

A GOOD story is told of the man selling soda water fountains, says the Sporting Goods Dealer. He worked hard to sell one to an old druggist and could only get the response that the druggist had never had any call for soda water. The up-to-date druggist on the opposite corner put in a soda water fountain and in a few weeks, and during the hot Summer days, the profits from it paid the rent of the store. Now, the old, fossilized druggist would not put in the soda water fountain because he had never had any call for soda water. It's so with many merchants. They do not put in stock good paying lines which belong to their business simply because people do not come and ask for the goods as they do for common wants of living. The business, however, is there, and it is only ready for the storekeeper to reach out and take up if he only knew it.

Sporting Goods are Profitable.

That sporting goods when once taken up are profitable is known by the fact that they are bringers of business. They bring customers into the store, men customers, for sporting goods appeal to men only. This is one reason why department stores have been and usually are unsuccessful in selling fishing tackle or other sporting goods, because the department store is not a man's store, and women seldom buy their husband's fishing tackle or his gun goods, although they may buy his shirts or even his neckwear. But when it comes to picking out his fishing outfit or camping goods he draws the line; if a sportsman he finds as much pleasure in buying the goods as using them. So it is that no matter what business the dealer is doing he finds that a line of sporting goods will bring more men customers into his store. Suppose it to be a hardware store, it is true that nearly 80 per cent. of the average dealer's customers are men. Now the more customers a dealer has coming to his store—no matter for what they may come—the more trade that dealer is going to have. It may be only a fishline or a box of cartridges the customer buys to-day. He may formerly have been buying what little pick-up tools he needed at another store, but if he is well waited on, gets a good fishline or box of cartridges at the right price, sees a good display of goods, a well-arranged and well-kept store, you may rest assured that it is only a question of time until that man will become a regular customer of that store.

Good Display Sells Goods.

It has been carefully estimated that in fishing tackle not over 50 per cent. of the goods sold at retail are ever used by the original purchasers. It goes without saying that the reason for a large amount of the tackle being bought is because the sportsman sees something he fancies—or fancies the fish will fancy. We all have heard about the country boy who caught all the big trout with a bit of white string, a bent pin and a hickory pole for his outfit. Many of us know that in our younger days as country boys that with a ten-cent outfit we used to catch more fish down by the big swimming hole than we ever have since, even with the best tackle and most attractive assortment of flies. But, of course, in those days there were more fish and it was easier to get them. And that is just another reason why a better class of fishing tackle is being sold. Fishing has become here in many parts of our own country more of a science, and better tackle, lighter rods and lines and leaders and smaller flies are necessary. But all this bears out the statement that very much of the tackle bought is really never used, and therefore to be sold it must be displayed. There is the whole thing in successfully selling sporting goods. A man may come into a store and buy almost anything in hardware, without having his

Limited.
HAMILTON, ONT.

attention drawn to it. He knows pretty well about tools, or files, or locks, but when it comes down to sporting goods, the only way to sell the goods—except ringed fish hooks and .22 short cartridges—is to properly display the line.

FACTORY-LOADED SHELLS BEST.

DISCUSSION of a more or less heated kind has been taking place in the columns of several of the trans-Atlantic sporting papers on the superiority or otherwise of the factory or the dealer in the loading of cartridges. The argument is a strong one on both sides, but the balance seems to lie on the side of the factory machine-loaded shells. The contention of the hand-loaders is that an individuality is necessary in the cartridge because the gun has an individuality which has to be studied in order to produce the best results. The advocates of the factory-loaded shells, however, aver that the uniformity of loading even of second-rate materials produces better results by machine-loading than similar materials loaded by hand. There seems to be common sense in this, and if it be conceded that the factory uses the best of material surely the exact uniformity of the loading must minimize the faults of it. It may, of course, be true that every gun has its individuality in shooting, which necessitates special cartridge loading, but this appears to cut two ways, in that it makes the gunmaker admit that he can not make a gun that will shoot an ordinary cartridge effectively. The way to settle such a question is to experiment in a series of trials for pattern and penetration. There seems prima facie to us a probability on simple logical principles, of the factory load winning hands down.

STORAGE OF EXPLOSIVES.

FOR years the city council on Montreal have been trying to adopt by-laws which would regulate the storage of oils and explosives in that city. During this time the most absolute carelessness has been manifested on the part of many dealers, some of whom have not even taken the trouble to secure the license demanded by the city statute. Cases are cited of immense quantities of powder being stored in old wooden shacks, in some of the busiest parts of the city, without paying any attention to the law requiring a city license for this privilege. Under such circumstances it is miraculous that Montreal has escaped many serious explosions.

At length, however, an adequate by-law has been prepared, and the city fathers have given their assent to its second reading. Its comprehensive and drastic nature may be guaged from the fact that it covers twenty-two printed pages, with the avowed object of prohibiting "the manufacture, storage, use and transport of explosives, and highly combustible materials, within the city of Montreal, and to prevent accidents by fire."

The retail hardware trade will be especially interested in the following provision:

"No person shall store or keep for sale any of such liquids (petroleum or other oils) in any quantity exceeding one hundred (100) gallons or any of the explosives above mentioned, except in building or premises approved of by the inspector, and then only after a permit to do so has been obtained from the council, as hereinafter provided."

The by-law also contains half a dozen clauses on automobile storage, repairs to the machines, and the sale of naptha, and instructions are very definite as to the use of explosives in blasting operations.

The new regulations are being very favorably received among the wholesalers, and it is almost certain that they will work out to the great ultimate advantage of the retailer as well.

How to Get More Business

This is for the wide-awake paint dealer. If you are not a progressive, energetic dealer this is not for you. If you are always alert for new business, read this over—read it twice.

There's a great field for trade and profits in *S-W. Aluminum Paint.* It is made especially for use on gas stoves, ranges, water boilers, pipes and fixtures, machinery, implements, mail boxes, chandeliers, railings, iron poles, decorative work, outside or inside, store fronts, automobiles, etc. When people see what it can do, they buy it constantly and are delighted with it. It has these distinctive points of excellence that put it in a class by itself: no disagreeable odor; gives a durable velvety lustre; is unaffected by extremes of heat or cold; works easily; has great spreading capacity. For these reasons it reaches a very large sale wherever it is pushed.

S-W. Aluminum Paint is a specialty that is an especially good seller at this time of year. Write our nearest office for information.

SPORTING EXPLOSIVES.

IN the smokeless powders now on the English market, there has been practically no change for the current year, but it is interesting to observe that as time goes on the majority of them are coming to conform more and more to a common standard of loading. Powders of the 42-grain type, and those of the 33-grain type, have this year been new issue of "Loading Instructions" published in London by the Sporting Goods Review. In looking over the new chart it is at once observed that all the 33-grain granulated powders, such as Improved E. C., Imperial Schultze, Empire, or Smokeless Diamond, can be charged practically alike. In the same way, 42-grain powders, Schultze, Amberite, etc., have something nearly approaching a common basis for practically all bores. The "Condensed" powders, leaflet powders, etc., each compound having its own peculiarities, cannot, of course, be grouped together in any such manner, and for them special loading is always required. In sporting rifle powders, we have had the new Cordite M.D. adapted for small-arms, which is a decidedly successful innovation, although the explosive requires very careful loading. There is also Messrs. Kynoch's "Axite," which already has had a run of popularity. The firm is receiving daily large numbers of orders for cartridges which, it is specified, are to be loaded with "Axite."

A novel picture hook is being introduced in England by Crawford, Hughes & Co., Ryder street, St. James, London, S.W. It fits on picture molding and prevents the tilting of pictures by having three teeth on the lower end, two pointed upward and one down.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Florence Steam Boilers.

PEASE FOUNDRY CO., Toronto, have issued catalogue "A," illustrating and describing Florence steam boilers, water heaters and heating materials. The book is very tastefully gotten up, comprising twenty-four pages and cover. The illustrations are very beautiful and the reading matter exceptionally instructive regarding hot water and vacuum heating. Another booklet which this company has gotten out is entitled "A Winter Comfort," being devoted particularly to a description of the Pease warm air furnaces, the book comprising forty-four pages and cover. Still another book is one of thirty-two pages and cover, describing the Economy sectional boiler for steam and water. All of these catalogues are of particular interest to the heating and stove trade, and copies can be secured from the manufacturers by mentioning the name of Hardware and Metal in a letter of inquiry.

Sportsmen's Specialties.

"Marble's Specialties for Sportsmen" is the title of an elaborate booklet of fifty-six pages and cover just issued by the Marble Safety Axe Co., Gladstone, Mich. Safety pocket axes, axe sheaths and protectors, safety pocket knives, hunting knives, fish knives, compasses, waterproof match boxes, rifle sights, fishing tackle, game bags, hunting belts, and numerous other specialties required by sportsmen at this season of the year are thoroughly described and illustrated in the book, besides which there is a splendid department of hints to hunters, the whole making a valuable book for the hardware merchant to have on his counter during the hunting season. If the name of Hardware and Metal is mentioned a copy of the booklet will be supplied to any of our readers by the manufacturers.

Home Happiness.

Gurney Oxford heaters and radiators, and Doric boilers, are the subjects written of and pictured in a most artistic booklet of twenty-four pages and cover, supplied by the Gurney Foundry Co. to dealers who handle their stoves. and to others who desire to learn more of the good qualities of Gurney goods. The booklet is very well arranged, and the reading carries the reader from the earliest attempts at making fire for heating down to the most modern systems of to-day. Inquiries for copies of the booklet should be sent to the Gurney Foundry Co., Toronto, and the name of this paper should be mentioned.

Electrical Specialties.

Hubbell pull attachment plugs are described in a folder just sent us by the R. E. T. Pringle Co., manufacturers of electrical apparatus and supplies, St. John, Montreal, and Toronto. The cuts reproduced indicate the workings of these devices, while the reading matter gives considerable additional information. The company has also issued leaflets describing telephone cross arms, fusible shade holder receptacles, Hubbell shade holders, and the Crown commutator compound. Dealers handling electrical specialties should send for these leaflets and folder, mentioning Hardware and Metal when writing.

AND NO DISCHARGE

Bang the hammer of a loaded Iver Johnson against the table; throw the revolver around as carelessly as you would a handkerchief; handle it as roughly as you may, and there can be positively no discharge —don't do this with *any other make of revolver* if you value your life.

You can't fire it unless you pull the Trigger

IVER JOHNSON REVOLVERS

are the *only* revolvers absolutely safe from accidental discharge—*as safe in the home as the kitchen stove.* The reason lies in the fact that the hammer *never* touches the firing pin, and the firing pin never comes in contact with the cartridge except when the trigger is pulled *all the way back.*

Our Booklet, "SHOTS," mailed free with our descriptive catalogue, *proves* these claims and describes Iver Johnsons with complete illustrations. May we send it to you?

IVER JOHNSON SAFETY AUTOMATIC

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply you.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Sporting Goods.

The firm of T. W. Boyd & Son, Montreal, have issued a fine catalogue of 290 pages, profusely and well illustrated, of their immense stock of fire arms, sporting goods, bicycles and general material, and style themselves the headquarters for Winter sporting goods in Canada. They take the output of a toboggan factory, and their snowshoes and moccasins are made by the Indians for them. Mention Hardware and Metal when sending for a copy of the book.

Mutual Fire Insurance.

"Donts & Cants" is the title of a leaflet recently published by the Hardware Dealers' Mutual Fire Insurance Co., of Wisconsin. It announces that this company has saved its patrons during the first eight months of this present year over twelve hundred dollars. The Donts include cautions not to be mislead, not to procrastinate not to serve other interests but the dealer's own. The Cants include admonitions to subscribe to the insurance fund of this company without delay. C. A. Peck, the energetic secretary, located at Berlin, Wis., will be pleased to send one of these leaflets to dealers upon application.

Fireproof.

The Pedlar People, of Oshawa, Ont., have just issued a booklet under the name of "Fireproof," illustrating the uses of their newest lines—steel studs, furring strips, angle strips, suspended ceiling, and other fireproofing methods. This booklet, which contains sixteen pages of neatly printed and well illustrated matter, will be sent to all interested readers of this paper who drop a card to the head office of the Pedlar People at Oshawa, or to any of their numerous agencies.

Scully's Stock List.

The September and October issue of the stock list published by the Scully Steel & Iron Co., Chicago, has been received, the book comprising one hundred and forty-four pages and cover. The machines and tools listed are well illustrated. Readers of Hardware and Metal can secure the copy by stating they saw the offer in this paper.

Canadian Buffalo Forge Co., Limited.

The above company have issued a small booklet to circulate through their jobbing agents, illustrating their blowers, drills, punches, tire benders, etc. An interesting argument advanced in favor of Canadian Buffalo Forge Co.'s goods is that, being made in Canada, there is no necessity of paying duty on repair parts. This pamphlet will be sent to any one inquiring of the Canadian Buffalo Forge Co., Limited, Montreal.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE Canadian Pacific Railway Company are planning to establish an elevator with a capacity of 1,000,000 bushels at Vancouver. They are also looking into the possibility of operating trains through the mountains by electric energy, for which work 65,000 h.p. is now under development from a waterfall in the vicinity of Calgary.

The Jackson Wagon Works of St. George may remove to Galt.

The London Box Co. are to rebuild their factory which was recently burned down.

The London Machine & Tool Co. have secured a permit to erect a $40,000 factory in Hamilton.

The Dominion Atlantic Railway are now operating the Midland Railway in connection with their system.

The peat works at Fort Frances are now in full operation. A large amount of electrical machinery has been installed.

A cedar mill with a capacity of 40,000 feet of lumber a day is being erected at Greenway Sound, B.C., by J. S. Emerson.

H. Lamontagne & Co., wholesale harness manufacturers, Montreal, have decided to establish a distributing warehouse at Brandon.

The Hampel Paper Box Co., of Brantford, are adding new machinery to their plant and extensive alterations and improvements are contemplated in the near future.

The contract for the construction of the Lake Superior branch of the Grand Trunk Pacific Railway has been awarded to Foley Bros., Larsen & Co., of Winnipeg.

The Pilot Bay smelter situated on Kootenay Lake, near Nelson, B.C., has resumed work after being closed since 1898. The zinc reduction works will be used in conjunction with the plant.

The report of the directors of the Dominion Iron & Steel Co., who hold their annual meeting on October 18th. shows that the earnings for five months amount to $366,062, not including the profits on the steel rail mill.

Port Hope has completed arrangements with a new company who will establish a factory in that town to manufacture building paper, etc. Fifty men will be employed and $50,000 will be spent in machinery and building.

Rhodes, Curry & Co., of Amherst, N. S., have received a contract from the I.C.R. for the building of two hundred box cars, one hundred to be built with a capacity of 30 tons and one hundred with a capacity of 40 tons.

The Ontario Electric Power Co. at Niagara Falls has completed a contract with an American firm to deliver 30,000 horse power at $12 per horse power, and have closed another contract in Welland for 1,200 horse power for $15 per horse power.

The Electrical Supply Co. of Moncton has been organized with John S. McGee as president. The company has taken over a patent adjustable electric lamp, patented by Osten Berry of Ottawa, and will also carry on an electrical supply business.

The Wolverine Cedar Lumber Company of Menominee, Que., have closed a deal for a large tract of timber on the Spanish River, Ontario, estimated to contain more than 100,000,000 feet. The price paid was $5 per thousand, or $500,000 for the entire tract.

Whalen & Bowman, of the Great Lakes Dredging Co., of Port Arthur, have purchased a site on island No. 2 at Fort William for the building of a dry dock and marine railway, together with a foundry and machine shop. The town is granting exemption from taxes for ten years and will also close the street in front of the site. The new industry will employ about one hundred men.

The Canadian Fairbanks Co., Montreal, have just closed a contract for all transmission material used in the new plant of the Boston Last Co. at Richmond, Que. This order includes Fairbanks Universal Giant Hangers, Oneida Steel Split Pulleys, Universal Giant Friction Clutches, shafting, couplings, etc. A similar order has also been received from the Dominion Coal Co. for the installation of transmission material in their plant at Sydney, C.B.

A proposition has been made to Sarnia by Messrs. Richards & Maguire of Cleveland, offering to establish a machinery plant in Sarnia to continue the business of the Canada Machinery Company, which was recently burned out at Point Edward. The offer is to build a plant and maintain a force of 125 to 200 men, with a payroll of $80,000 annually, on condition that the town will supply a site and extend a loan of $25,000 for a period of five years for building purposes.

The annual meeting of the Lake Superior Corporation was held at the offices of the company in Jersey City last week. The annual report of the directors showed the income for the year ending June 30 to have been $585,539. After paying all expenses and interest on the first mortgage, the amount of $34,800 was carried to the credit of profit and loss. In view of the difficulties in connection with re-organization and the inseparable difficulties and delays incidental to getting the plants into operation, the directors and shareholders considered the report highly satisfactory.

Bounties were paid on iron and steel from 1898 up to June 30 last amounting to $5,702,967. For the last fiscal year the amount was $1,540,041, against $908,962 for the previous twelve months. The Dominion Iron & Steel Company received $676,880, which was the largest amount paid to any corporation. The Algoma Steel Company, Limited, came next, with $404,956. The following were the bounties paid out last year for these products: Pig iron, $62,666; puddled bars, $7,894; steel ingots, $614,433;

manufactures of steel, $293,208; lead, $233,844; lead exported for treatment, $96,800; binder twine, $13,789; crude petroleum, $350,047; total, $2,234,685. The amount paid for crude petroleum, at 1½ cents per gallon, would represent a total production of 52,507,050 gallons.

The furnace plant of the Atikokan Iron Company is in course of construction on Thunder Bay, about midway between Port Arthur and Fort William. The furnace can scarcely be ready before late next year. Coke ovens of the bee hive type will be built, but no steps have yet been taken toward construction. To facilitate the smelting of the magnetic sulphuric ores of the Atikokan a large crushing plant and roasting beds will be established at the furnace, waste gases of the stack being expected to do what roasting is needed. At the mine the Canadian Northern has built a spur to the property now under development, and tunnels are being driven into the ore formation, exposing a large quantity of high grade ores. Diamond drilling at depth will determine the extent of the ore bodies, which are now known to be important.

—

Companies Incorporated.

The charter of the Ham & Nott Mfg. Co., Brantford, has been surrendered.

The Pembroke Electric Light Co. have secured power to increase their capitalization from $50,000 to $150,000.

The Brakehurst Oil Company, Sarnia, share capital $100,000, purpose to carry on the operations of a mining, milling, reduction and development company. The directors are George Montgomery Trefts, Buffalo, N.Y., Josephine Winfield Brake, and John Hingston Cooper, both of Sarnia.

The Canadian Oil & Waste Saving Machine Co., share capital $50,000, Brockville, purpose to buy and sell machines for separating and reclaiming oil waste and other substances. The directors are Francis Edwin Clayes, William Senkler Buell and James Henry Botsford, all of Brockville.

Canadian Hart Corundum Wheel Co., Hamilton, share capital $75,000, purpose to manufacture and deal in abrasive materials, machinery and hardware. The directors are G. F. Webb, C. S. Wilcox, H. E. Shirk, F. H. Whitton and A. S. Devine, all of Hamilton, and C. D. Warren of Toronto.

The Rothschild Cobalt Co., Haileybury, share capital $500,000, purpose to carry on the operations of a mining, milling and development company. The directors are Daniel Rothschild, Herman Joseph Max Rothschild, of the town of New Liskeard, and John McKay of the town of Sault Ste. Marie.

The Standard Silver & Cobalt Mining Co., New Liskeard, share capital $40,000, purpose to carry on the operations of a mining, milling, reduction and development company. Directors are John Armstrong, George Warrell, John Sharpe, Elijah Field Stephenson and William McNab, all of the town of New Liskeard.

The Blanche River Mining Co., New Liskeard, share capital $40,000, purpose to carry on the operations of a mining, milling and development company. The directors are John Pearce, John Dawson, James Adair, George Scott Royce, Samuel Greenwood, Alfred Isaac Ritchie and Edmund Theodore Ord, all of the town of Liskeard.

No. 25. OSHAWA, ONT. Oct. 14, 1905

A BIG BUSINESS

Don't get it into your head that as we talk Expanded Metal Lath continually, we only sell Expanded Metal Lath. Our "Perfect" Expanded Metal Lath is without a peer in the world, but we also sell other materials which occupy an equally unique position. We leave you to reply to the following questions:—

"Is there anything made in Canada that answers the purpose intended as well as our 700NA Brick Siding? Our 709NA and 709NB Stone Siding? Our 710 Rock faced Stone Siding? Is there a Metal Shingle as good as our Oshawa Shingle? Do any persons, other than the Pedlar People, employ the skill to create and produce Zinc and Copper enrichments with the architectural and artistic results that we have attained? Is there a firm other than the Pedlar People who manufacture ***EVERYTHING*** you require in the general line of Roofing, Siding, Lathing, Furring, Studding, etc., etc.? Some ***say*** they ***do—WE DO.*** Is there another firm in Canada who have distributing warehouses in such central points as Montreal, Toronto, Ottawa, Quebec, Winnipeg, Calgary, Vancouver?

Consequently, ***"Is there another firm who can sell as cheaply and deliver as promptly as the Pedlar People?"***

The Verdict

of the Trade is practically unanimous in ascribing incontestable superiority to the Atkins Celebrated High-Grade Hand and Cross-Cut Saws. Fifty years of experience, the finest of crucible steel, patent gas temper, improved methods of manufacture and expert workmanship, are cardinal points of excellence in the make-up of an Atkins Saw. Every Atkins Saw sold from your store goes out as a silent but effective salesman for your whole line of goods. Atkins saws are a profitable line to handle. Catalog and discount sheet on application.

BUILDING AND CONSTRUCTION

DISSTON'S CANADIAN FACTORY.

Henry Disston & Son, saw manufacturers, of Philadelphia, have commenced work on the erection of their new brick and steel two-storey factory, at 112 Adelaide street east, Toronto. The new building will be modern and fireproof in every respect, and will be equipped with the latest machinery for the manufacture of circular and band saws, and mill goods. The new factory will be in operation before January 1st, and seventy-five men will be employed to commence with. Goods for the export trade and Canadian market will be manufactured. The Canadian branch of the Disston Co. is incorporated under an Ontario charter, the capitalization being $100,000. The charter was secured before the anti-dumping clause came into effect, so that this tariff legislation was not the means of bringing the Disstons to Canada. Mr. W. E. Radcliffe will have the management of the Canadian branch.

BUILDING NOTES.

A $4,000 skating rink is to be erected at Hull.

A match factory is to be established at Kenora.

The Whyte Packing Co.'s factory at Mitchell is being enlarged.

T. L. Nickle, Madoc, is erecting a large implement showroom.

Senator Choquette is to erect a building in Quebec to cost $11,000.

E. St. Jermain is erecting a large store and dwelling at Hull, Que.

W. M. Child, Regina, is to erect a three-storey business block shortly.

Alderman Allan will build three brick houses in Hamilton, to cost $5,100.

Jas. Clinkskill has had plans prepared for a new cement block at Saskatoon.

J. P. Mullens has purchased a site for a modern hotel, to be built in Hamilton.

The Minerva Mfg. Co. are to erect a large factory on College street, Toronto.

J. Y. Griffin & Co. are building an addition to their factory at Elmwood, Man.

The Sawyer-Massey Co., Hamilton, are to build a new foundry, to cost $20,000.

A new curling and skating rink, to cost $4,100, is being erected at Seaforth.

The Massey-Harris Co. contemplate erecting a large central warehouse at Orillia.

Colonel H. M. Pellatt is to erect a $200,000 residence and a $40,000 stable in Toronto.

Contractor Joncas, Cookshire, Que., intends building a skating rink and a

A factory for the manufacture of piano actions, etc., is to be established at Toronto Junction.

hotel at that town.

The Williams Grace Co., of Winnipeg, have the contract for the erection of a new hotel at Portage la Prairie.

Edward Gurney, of the Gurney Foundry Co., Toronto, has begun putting up a handsome home on Walmer road.

J. W. Doherty has sold the Norwich Brush & Broom Factory to a new company, who intend opening warerooms in Toronto.

Pisch Bros., of Lacrosse, Wis., are are likely to establish a factory in London for the manufacture of a patent cigar box.

The Dominion Government is calling for tenders for the construction of the Indian and Fisheries Building at New Westminster.

It was stated that at least 8,000 people in Hamilton are unable to rent homes. The Westinghouse Co. has decided to erect 300 new houses.

Buildings to the total value of $613,000 were authorized in Vancouver during September, this including a permit for the new post office, to cost $500,000.

Thomas Crooks, Hamilton, is to erect a $50,000 store and office building in that city. Special attention is to be given to the heating and ventilation system.

The Canadian Tool Co. is commencing operations in London. Another firm in the same city to commence manufacturing being the Standard Woven Wire Fence Co.

The Bains Carriage Works, Buffalo, are to be moved to Hamilton. The company will build a factory with the capacity of 100 buggies a day, four hundred men being employed.

Mr. Robert Meighan, of Montreal, has contracted for fireproof hollow window sashes and frames for his residence. Geo. M. Reed & Co. have been awarded the contract.

The Dominion Coal Co. intend erecting several large new buildings at Glace Bay, N.S. The work will include a warehouse, machine shop, foundry, and probably a car shop.

Building permits have been issued in Hamilton to the following: H. G. McMahon, three dwellings, $6,000; Noble & Co., four dwellings, $3,400; W. A. Stephens, two dwellings, $3,500.

The Brantford Felt & Rubber Co. have purchased the factory lately occupied by the Bailey Cutlery Co., and will install the necessary machinery for manufacturing felt and rubber footwear.

The first consignment of steel rails for the new Toronto-Sudbury division of the C.P.R. have been received at Owen Sound from the Lake Superior Consolidated Co.'s mills at the Soo.

The Canadian Electrical Development Co. have entered into an agreement with the Toronto, Hamilton Railway Co., whereby the latter firm will construct a line between Toronto and Niagara Falls.

The Jenckes Machine Co., of Sherbrooke, Que., have placed an order with the Pedlar People, of Oshawa, for nearly eight hundred squares of corrugated galvanized roofing, to be used in covering their new plant at St. Catharines, Ont.

H. H. Rice, of Denver, Col., won first prize for the best paper on the manufacture of concrete blocks and their use in building construction, in a contest recently conducted by the Engineering News and the Cement Age of New York.

Plans for the new street car sheds of the Montreal Street Railway Co. have just been completed by Messrs. Marchand and Haskell, architects. The contract for construction of this building has been given to the Canadian White Co., Limited.

Edmonton is building up very rapidly. Amongst the building permits recently issued we note the following: F. Oliver, addition to office, $2,225; A McDonald Co., warehouse, $12,525; Miss E. MacLeod, dwelling, $1,800; R. W. Hill, dwelling, $13,075; H. Bowen, dwelling, $8,000; Journal Co., office, $2,000; W. A. Griesback, dwelling, $2,200; F. A. MacLean, dwelling, $1,500; P. M. Turnbull, dwelling, $8,000.

The Canadian White Co., Limited, Montreal, have been awarded the contract for erecting at Hamilton, Ont., the new head office building of the Federal Life Assurance Co. Messrs. Finley & Spence, architects, Montreal, have drawn the plans for the building, which will be an eight storey modern steel construction fireproof office building, and will represent the latest type of building of this class. According to the terms of the contract, the building is to be ready for occupancy not later than August 1, 1906.

MONTREAL BUILDING PERMITS.

Thos. Evans, 113 Rushbrooke street, dwelling, $2,000.

Geo. Yeoman, Frontenac and Rachel, dwellings, $2,300.

E. Roy & Co., 149 Mentand street, dwellings, $10,000.

STOVES AND TINWARE

LOCOMOTIVE WINDOW DISPLAY.

IN the accompanying cut we show a display recently made in the store window of Mesrrs. W. Conn & Son, Aylmer, Ont. Considerable inventive genius is displayed in the arrangement of the painting in the background, the bedding of rails and sleepers on a gravel floor and the construction of the engine and cab. Aylmer being a railroad town near the railroad city of St. Thomas and being on the Wabash Railroad, the display attracted a great deal of attention and Mr. Ack Conn was highly commended for his work in arranging the window.

In the make-up of the engine nothing was used except goods taken from the stock in hand, the cab being constructed of metallic siding, shelf brackets and flint coat roofing. A match box was used for the step. The track was ordinary barn door track resting on ties made of adze handles. The boiler was a 15-gallon railway milk can with domes made of Gem milk strainers and a No. 3 Yankee stove kettle, a hand bell being arranged on the top and a paint can making up the smoke stack. The whistle was made of a door check, the hand rail was a curtain rod, half-inch rubber tube was used as a sand pipe, while the headlight was a dark lantern and search light. The cylinders were a half-gallon oil can and one-quart milk pail. Bread pans were used underneath to imitate the fire box, while the cow-catcher was constructed of tack pullers and brad-awls. The engine wheels were of door sheaves and 12-inch weld wheels. Three-quarter-inch tees, three-quarter-inch nipples, three-quarter-inch elbows and three-quarter-inch locked nuts were used in the construction of the air pump. Candlesticks and small flags made up the flag staffs at the front of the engine. The boiler supports were sixteen-inch granite basting spoons.

Locomotive Window Display.

DIRECTIONS FOR FURNACE WORK.

EVERY furnace job is a problem in itself, and no rule or set of rules can be set down as being infallible. Good judgment must be used in connection with all rules, but even with the most careful thought a certain pipe, or sometimes the whole job, will refuse to equal the expectations of either the owner or the contractor.

1st. The upward motion of heated air is caused by the lifting power or pressure of cold air. Cold air being a denser, heavier body than warm air, it does not mix with the warm air, but simply pushes the warm air out of the way and takes its place. The result of the operation of this natural law in the confines of a furnace jacket must be a lifting of the heated air into the upper part or bonnet of the casing, thence through the pipes and registers into the room connected with the furnace.

2nd. As the natural movement of heated air is upward, it follows that the greater the elevation of the warm air pipe the more rapid the flow of air.

3rd. Air, like water, will always flow toward the point of the least resistance.

4th. Two bodies cannot occupy the same space at the same time. As cold air and warm air are two separate and distinct bodies, the warm air from the furnace cannot occupy the space of the cold air, already in the room to be heated, without displacing the cold air.

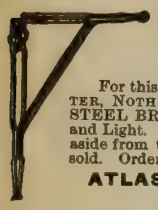
5th. The velocity of the air movement through a warm air pipe depends, first, upon the excess of temperature of air in this pipe and the air in the cold air duct; second, on the height of the outlet above the furnace; third, on the amount of frictional resistance in the pipe itself, and fourth, the pressure resistance in the room in which the outlet is placed.

6th. Air at 32 degrees Fahr. or less is practically without moisture, and when heated above 32 degrees Fahr., doubles its capacity for moisture with each 27 degrees of heat added. It increases its capacity for moisture very nearly four times from 32 degrees to 72 degrees.

7th. Ventilation and furnace heating should always go together; as the warm air from the furnace must displace the cold air in the room, provision should always be made for cold air ducts from the rooms heated.

8th. Unless a furnace flue is large enough and the draft good it is useless to expect satisfactory results from a furnace, for experience shows that though with a poor flue fuel will burn, it will fail to give forth heat sufficient to raise a furnace or heater to the requisite temperature to warm a house. For a seven or eight room dwelling a flue 8x10 on the inside is as small as should be used for hard coal and 8x12 for soft coal, and these are the smallest dimensions at which fair success can be hoped for. For a ten-room house, an 8x12 hard coal or a 10x12 for soft coal should be the minimum, while for larger houses these dimensions should be increased. All flues should be plastered smooth on the inside, and before connecting a heater the flue should be examined to see if the masons have left same stopped up in any place or filled with rubbish at the bottom. No dealer should guarantee a job in which the flue for heater is defective, and should state in his guarantee that said guarantee shall be null and void unless the flue in house is found to be a good one.

Bearing the above facts in mind, let us see how they would apply to the practical solution of a job of furnace work.



First in importance is the location of the furnace and registers, and considering Rule 3, we learn that air, like water, will always flow towards the point of least resistance. It naturally follows, therefore, in locating a register in a room, great care should be taken in

ST. JOHNS, QUE.

favoring that location which will give the least resistance to the incoming flow of air. Cold air being heavier and denser than warm air, it follows that the proper location of a register in a room should be the warmest place in that room, or, in other words, on the side of the room furthest from outside influences. After locating the registers, locate the furnace with reference to the registers in accordance with Rules 2, 3 and 5. Rule 2 teaches us that the greater the elevation of a warm air pipe, the more rapid the flow of air; Rule 3, that air will more readily flow toward the point of the least resistance; Rule 5, that the velocity of the air is dependent on the height of the outlet above the furnace, on the amount of frictional resistance in the pipe, or in other words, the length of the run, and the pressure resistance in the room in which the register is placed. In accordance with these rules, rooms having the greatest exposure in the direction of the prevailing winds, on the first floor, naturally will have the greatest pressure resistance in the rooms themselves, because of the wind; have slow velocity on account of lack of elevation, and should therefore be favored by nearness to the furnace and a larger pipe and register. Rooms which are remote from the furnace, necessitating a long horizontal run of pipe, should be favored by larger pipes. Aim to minimize the frictional resistance in all pipes by avoiding all square turns or abrupt angles. Insist on having at least one inch rise to the running foot of pipe from the furnace to the register. Long runs of pipe, especially when going through cold rooms, should be wrapped with asbestos paper; pipes going through stone or brick walls should have thimbles of one inch larger diameter than the pipe. In the adjustment of the pipe work, bear in mind that according to Rule 1 the pressure of the air is equal on all pipes at the furnace. If, therefore, some of the pipes do not flow as freely as others, the cause of that trouble may be looked for either in the frictional resistance in the pipes, pressure resistance in the rooms into which these pipes lead, or that an adjacent pipe, having the advantage of elevation, is taking more than its proportion of the heated air. Should the trouble be caused by frictional resistance, look for obstructions to the free and natural flow of air, such as abrupt angles, etc., and remove them. If this does not furnish the remedy, then increase the size of pipe. If the trouble is caused by pressure resistance in the room itself, this resistance is caused by air pressure in the room, and some outlet must be provided before satisfactory results can be obtained. A very satisfactory solution to this difficulty can be had by cutting an opening in the baseboard of an inside partition between two studs, and utilizing the space between two studs and plaster walls for the vent duct. The plates on top of the studs must be cut, and the duct be unobstructed to the attic. Generally speaking the air will find its way out of the attic, but in case it does not readily clear itself, an opening can be made in some unused chimney, or otherwise. When inside air is used all doors must be left open and chimneys or fire places must be closed.

The second greatest mistake in business is negligence. The greatest mistake is carelessness.

For sale by

E. T. Wright & Co., Hamilton, Canada.

A PERFECT BAKER

THE EMPIRE QUEEN RANGE

THE FLUES of our range are constructed on the most modern principles. When the baking draft is used the heat is forced round the oven twice and so arranged that the heat is spread uniformly on all sides. The heat, after leaving the fire-box, passes over the top of the oven, down the back, and under the oven ; up the back and over the top of the oven, directly under the inner pot-hole, and into the smoke pipe, thus ensuring the quickest results from the oven and from cooking holes at the same time.

OUR AGENTS can make good use of this feature. Are you our agent ? Write for our new booklet.

We never asked a dealer to carry any line of goods we produce for which a ready sale and substantial profit was not immediately visible. The **Oxford Steel Chancellor** is the perfected achievement of 60 years' ambitious effort. You can sell it more easily than we can make it.

To G. J. Gibbons
Calt Book 42
Page 69

OUR GUARANTEE BOND GOES WITH EACH RANGE

The Oxford Chancellor Range

is constructed of the finest rolled steel plates, interlined with asbestos mill-board, which gives perfect insulation.

Splendid Oven Capacity. The oven in this range is designed to meet the requirements of a big family. It will contain a large roast, and the heating arrangements are so uniform that the results will be exactly as desired. The drop door, fitted with our patented spring, makes a splendid shelf for basting.

The Draw-Out Duplex Grate is an admirable feature. It makes repairing easy because it obviates all disturbance of the fire-box or water-front. This is one of the talking points that does the talking.

Highly Ornamented. With all its exclusively useful features, the Oxford Chancellor does not play second to any range ever made in adornment. It is handsomely embellished with nickel finishings, which add to its beauty and attractiveness, and you cannot put it alongside any range in your store without selling it first.

Write Us Now for particulars and terms. We aim to be as liberal as any manufacturer can be. If you haven't the Oxford Chancellor on your floor, you will find it most advantageous to put it there.

the inartistic manner in which it is set. This, of course, may not altogether be attributable to Mr. Potts. It depends on how he wrote the copy, for one thing. If his arrangement brought out "McClary's Famous," and gave less prominence to "Stoves and Ranges," then the compositor made a poor job ot it, even considering the disadvantages under which he labored.

* * *

To have been set with taste the space at present represented should have been secured in single column. The scrambled appearance would thus have been removed. Mr. Potts' remarks are too brief, anyway, to warrant the use of the present space. While the "He-who-runs-may-read" idea is all right in certain cases, it is well to remember that all the people are not in a hurry. When the people have time to inquire into statements they will do so, but in Mr. Potts' case there is nothing to encourage a reader to go further. The substance is all on the surface. Secondhand stoves are just about as prominently displayed as McClary's famous stoves and ranges.

* * *

The advertisement of Geo. A. Elliott, Jr., is quite a contrast to the other. Both the subject matter and the typography are superior. The conception one gets from a perusal, also, is clear and convincing. With one exception, harmony is secured between thought and type. That exception is displaying "Peninsular and Treasure" as if it were subordinate to "Stoves and Ranges," when it actually is the reverse.

* * *

The advertisement that came the closest to my own conception of what stove advertising ought to be, was on Souvenir Ranges, in a space four and one-half inches, double column. While it is not necessary to have so much space for "one talk," in the advertisement I refer to it was used to good advantage. The salient features—the name of the stove and the name of the seller—stood out above everything else. The subject matter consisted of seven lines of pointed comment, double leaded, the whole surrounded by a neat border.

* * *

This advertisement could be read quickly and yet could be pondered over as food for thoughtful buyers. There was no mistaking what was for sale, and who was the man to buy from. An adequate white space effect gave symmetry to the various parts. No illustration was employed, which, as I have noted before, is valueless unless it shows the features of the stove solely.

* * *

Another piece of "stove news" that I saw in a Woodstock paper measured up fairly well to at least one phase of the standard. The merchant knew what parts of his range to talk about, and what parts to pass over with a light reference, but, unfortunately, this bit of superior work was rendered inefficacious by a jumbled type arrangement, caused through the necessity of justifying around an irregularly-mounted cut. Had the cut been omitted, and the wording properly set, the advertisement would have been first-class.

* * *

It cannot be too strongly emphasized that merchants who advertise—and that should include every retailer with live blood in his veins—should pay particular attention to the setting up of the ad and the choice of the type by the printer. The display of advertisements is work for the journeymen rather that the printer's devil, but unless the merchant registers a kick when poor work is done the printer may let the work go to the young imp rather than the experienced hand. Study the composition of other advertisements and see that yours compares favorably with the rest.

* * *

An advertisement met with that was rather praiseworthy bore the name of an eastern merchant, who, apparently, reasoned to himself that the stove trade was by no means local. He framed his announcement to appeal especially to outsiders, and closed his remarks with the line, "When in town call and inspect my goods." An artistic illustration graced the advertisement, but the chief idea was subordinated — the error of Messrs. Potts and E. Elliott, Jr.

* * *

A rather novel method of advertising hardware comes from A. W. Humphries & Son, Parkhill. On a regular post card Mr. Humphries had an announcement re binder twine orders printed for his customers, in which he works in some good points about his prices. But the novelty is attached to two columns of wares on each side of the announcement proper. In this space Mr. Humphries enumerates some seventeen articles—all seasonable. This is a good method of securing free advertising.

* * *

A. R. Dundas, Cobourg, sends for review an ad that he ran for two weeks in the Sentinel-Star. The advertisement certainly is businesslike, and I think Mr. Dundas, in making prices the feature, gave the necessary attention to an important phase in publicity. The list of wares is quite extensive, but the same plan of "cost" is carried throughout. While there might have been some economy in space, this drawback is counterbalanced by the impressiveness of the ad and its good position in the paper. Mr. Dundas knows "the business."

The October Number of

The BUSINESS MAGAZINE

Our New Home Magazine of the Busy Man and His Family.

Naturally, the first number of THE BUSINESS MAGAZINE will be eagerly read, if only out of curiosity. Still, we believe its table of contents will be so acceptable and readable that the saying "Once a reader always a reader" will be applicable to everyone who peruses it.

Here are a few of the good things presented in the first number of THE BUSINESS MAGAZINE :

The American Woman in Business
An account of how some bright women earn money in out-of-the-way trades.

Radium and the Sun
The marvellous constitution of the great solar luminary described.

Pigs is Pigs
A very funny story that will appeal to those having dealings with express companies.

George Westinghouse, Genius
The extraordinary life-story of a great financier and inventor.

Fortunes in Advertising
The way some people have made money through advertising.

The European Parcels-Post
Describing the system in vogue on the continent.

Shopping in Paris
A bright and humorous account of the way it is done.

A Night in a Travelling Post-Office
The thrilling account of a night-journey in a mail car.

Christie's
A story of the greatest salesroom in the world.

Besides these articles there are many more of equal interest.

Be Sure to Read this First Number of a Remarkable New Publication.

HIGH PRICES FOR METALS.

THE past two months have been remarkable for the strength displayed throughout the metal markets. Not for a long time has there been such a universal upward movement, and, since the metal markets are a most excellent barometer of conditions in the industrial world, we have every reason to feel elated at the long prices which these have been, and are still commanding.

In the course of this unusual activity at least one record has been created, a record which will doubtless stand for years. Reference is here made to antimony, that most useful metal, which, after a meteoric rise of over one hundred per cent., finally struck a record figure, when it commanded 17c. per lb.

The war between Russia and Japan started pig lead moving merrily upward. Though it was predicted that the declaration of peace would quickly bring it down, such a result has not developed, for, in spite of a slight weakening immediately following the close of the war, the market has recovered, and the price now current is the highest for the whole year.

Copper is another metal which has surprised consumers by its antics during the past two months. For no apparent reason it began to rise in value. Very soon it became a difficult matter to purchase copper even at the advanced price, and dark rumors were sent abroad to the effect that most of the surplus American stock had been secretly transported to China, to create a scarcity on this continent. Others charged the bulls on the Exchange with having boosted up the prices. It soon became apparent, however, that the scarcity was a real, and not an artificial, condition, so that copper and brass goods responded to the higher tone, which is still being maintained.

Zinc was bound not to be left out of the general boom, and Hardware and Metal has been obliged to record several advances of late in spelter, sheets and oxide. This, taken in conjunction with the strength of pig lead, has created an interesting condition in the paint markets, resulting in an advance in mixed paints.

The most satisfactory activity of all and the one which most obviously reflected the country's general prosperity, was in pig iron. Beginning on this continent with great buying movements on the part of the big steel interests, it quickly spread to Scotland, where a great deal of pig was bought by American firms. This great demand is said to have eased off during the present week, but the market still remains firm, and all the iron brokers are satisfied with the volume of business.

Another strong metal, though a very inconsistent one, is tin. On the announcement from the Dutch Government that the sales from the Banca mines would be restricted in future, a buoyancy immediately developed on the tin exchange. This has been the predominant note for more than two months now, so that in spite of a persistent bearish attack which occasionally depressed the market, prices at time of writing are at high water mark, and there is reason to believe that they will remain there for some time.

Looking at it from this standpoint, Hardware and Metal feels justified in terming the past two months a period of exceptional activity and prosperity in the metal markets.

CANADIAN CUTLERY TRADE.

CUTLERY is having an enormous sale in all parts of Canada, but particularly in the west where the splendid crop harvested encourages retailers to believe that farmers will be liberal buyers during the Fall and Winter months. Pocket cutlery is having a great run and, as in England, a growing preference is noticed for case goods and pearl handled fruit and table knives. The demand for the higher grade goods is more noticeable this year than in former seasons, this evidencing a state of good times as dealers are shrewd enough to gauge the purchasing likings of their customers.

FIREARMS IN HARDWARE STORES

A QUARTER of a century ago firearms, fishing tackle and general sporting goods were sold almost entirely by exclusive "gun stores," who were in evidence in every small town, and usually obtained old-time profits on everything they sold, says a writer in Hardware. Gradually the hardware merchants added guns, sporting goods, etc., until they have almost entirely driven out the old-time "gun man."

Nearly every up-to-date hardware stock now contains sporting goods. Some hardware merchants have a very complete assortment and if judiciously handled it should be one of their most profitable lines, but many do not handle the line intelligently. Study the line; no one can make a success of goods they are not posted on—carry the numbers staple in that section—have catalogues priced up to give a prospective purchaser the desired information, not only about the goods, but prices as well, if desired—see that your stock is complete for your trade during the season, which in some sections is Spring, others Fall and others Winter—reduce the stock when season is over, so as to have new fresh goods when the next season opens. Make attractive displays; if windows will permit, dress the window with sporting goods and kindred goods entirely. Good assortments well displayed, properly advertised and with intelligent salesmen are not half sold, but nine-tenths sold.

Sporting goods are proving every year more and more desirable for the hardwaremen to handle, and to those who do not find it so, the main trouble usually is lack of salesmanship and poor assortment. Many proprietors and their salesmen trying to sell guns do not know what the difference is between a twist and Damascus barrel, or why the "twist" in a rifle barrel. If one cannot talk his wares intelligently, can he expect to find them salable or profitable? And he who only sells what the trade calls for is not a merchant or salesman, but a storekeeper or order taker.

Modern merchandising is growing to be a science, the same as the professions, and it is only the ones who keep abreast of the times who can expect to succeed Sporting goods are in a sense luxuries and as such should be profitable and if not, the merchant should blame himself and not the line. Do not expect to make 100 per cent. on everything, but many of the small items will bear even more and the average per cent. will be quite satisfactory, better than the general average of the store.

When a customer places a large order for nails follow him up for an order for builders' hardware.

LABOR UNIONS OPPOSE TARIFF.

LAST week Hardware and Metal drew attention to the growing opposition of trades unionists to the Canadian Manufacturers' Association because the latter body continues to interfere in labor disputes. We showed that exactly what this paper had predicted two or three years ago was taking place—that if the Manufacturers' Association did not leave labor matters to be dealt with by employers' associations the manufacturers would incur the enmity and encourage the opposition of the workingmen in securing tariff legislation required to build up Canadian industrial establishments.

Since our article was written, however, further proof of the correctness of our position has been given by the publication of a statement issued by the Committee on Tariffs appointed by the Trades and Labor Congress, the circular being sent to every labor union in Canada urging unionists to appear before the Tariff Commission and oppose the Manufacturers' Association in securing a readjustment of the tariff.

The statement outlines the struggle the workers have to better their condition and says the Manufacturers' Association "has set out to oppose every demand made by organized labor. * * The Manufacturers' Association will seek an increase in the tariff. We will oppose any increase." The circular is scarcely ambiguous. It comes out flat-footed, and clearly indicates that the principal reason for the proposed opposition is because the Canadian Manufacturers' Association, which is advocating increased protection, has in the past opposed demands made by organized labor. The report does not presume to discuss the merits or demerits of increased protection. It simply announces the opposition of organized labor.

In discussing the action of the labor men Mr. W. K. George said the workers' policy was short-sighted as increased protection meant the establishment of additional industries in this country. "The Manufacturers' Association," said Mr. George, "is not seeking to place exorbitant profits in the pockets of its members. Our chief aim is the advancement of Canada, industrially and every other way. The manufacturers have never taken an actual stand against labor except at Ottawa, where we opposed what we considered was unfair legislation—the Union Label bill and some restrictions in the Alien Labor bill. We are not striving to antagonize or grind the laboring man. We want to live in harmony with him, and to do the best we can to meet the competition we receive from countries where labor is cheap or from across the border, where they have the advantage accruing from long establishment, experience, and the economy resulting from the use of labor-saving machinery."

From what Mr. George says the workers seem to have been given reason to look upon the manufacturers as their natural opponents. The labor men see the manufacturers asking Parliament for increased protection against foreign goods and commodities and opposing the Alien Labor bill, which aimed to give Canadian workingmen protection against cheap foreign labor. Then the workers became equally inconsistent by asking for protection against alien labor and opposing higher protection for manufactured goods. Had the Manufacturers' Association accepted the suggestion of the MacLean Trade Newspapers and left all opposition to labor demands to the employers' associations, it is unlikely that the Manufacturers' Association would have been singled out as the chief enemy of organized labor and the manufacturers' request for increased protection would not have met with such unanimous opposition on the part of the Trades Congress.

If the Canadian Manufacturers' Association is to represent the commercial interests of Canada in securing adequate protection for the upbuilding of Canadian industry it is high time that it adopted a "hands off" policy on labor matters.

THE VALUE OF SIDE LINES.

IN these days we are accustomed to see retail stores branch out by adding to their original stock one side line after another, and finally becoming great department stores where everything may be bought from a needle to a load of hay. While not expressing any great enthusiasm over the department store idea, the trade cannot fail to benefit by adopting, to some extent anyway, the methods of merchant princes of the present day. Let us consider, then, some of the lessons to be learned from their experience.

Many up-to-date retail hardwaremen have already adopted the plan of keeping stocks of good-selling side lines, which, in the great majority of cases, have proven to be most valuable business getters. Of course the most congenial side line for a hardware dealer to handle consists in seasonable sporting goods. Indeed, the majority of hardwaremen already handle these lines, especially guns, ammunition and skates. But they do not realize its importance, and make no effort to boom it. It is safe to say that no goods in an ordinary stock will attract so much attention in a store window as a careful display of guns, shells, and other shooting equipment, and such an exhibit would be the most seasonable at this time of the year. A little later on in the season a good hit could be made with a window of skates, hockey sticks, gloves and mitts, suitable for the great winter sport, snow-shoes and toboggans. It must not be thought, however, that these goods will sell themselves. The window must be prepared with the greatest possible taste, and this will require time which may be begrudged by some. But it will beyond doubt be seen that the more attention given to this display feature the better the results.

Another side line which is becoming popular among the trade is silverware. A small stock of well-selected silverware will make a fine appearance on a special counter, and at the Christmas season it will be found a most profitable investment. Some of aur best wholesale firms have learned the importance of this branch to the country dealer, and they keep complete stocks of fine goods.

But the line which will probably give the best returns on a moderate investment will be found to be mechanical toys. These are well worth a place in the hardwareman's Christmas stock, being very saleable and not subject to any depreciation in value. Unsold goods may be safely held over until the following season, as the juvenile mind is always ready to show delight at these contrivances.

From the standpoint of immediate profit, these and other side lines which may suggest themselves to the thoughtful retailer will be good assets. But their chief importance lies in the fact that they are bound to demand attention and attract trade. Then it rests with the dealer himself to hold this trade.

PRISON LABOR CLOSES FACTORY.

PRISON labor has always been recognized as a necessary evil, the great problem being to put criminals at useful labor to occupy their time while serving their terms of imprisonment. For many years the prisoners at the Central Prison have been engaged in making brooms, binder twine, and such woodenware for amusement as sleds, game boards, etc., but a change in policy was decided upon some time ago and in deference to the wishes of manufacturers who complained against unfair competition binder twine will no longer be manufactured at the Central Prison although the prisoners at Kingston will still continue to make it.

The making of brooms by prisoners has always been a sore point with the trade unions, the workingmen claiming that owing to the cheap labor of the prisoners manufacturers are unable to sell the factory made article at a figure sufficient to pay a living wage, let alone the wages desired by the unionists. After many years of protestation the labor

men succeeded in influencing the Government to discontinue the manufacture of brooms and thus another branch of industry in which the prisoners have been engaged has been done away with.

Now it appears that a Canadian factory at London is to be closed on account of its being unable to meet the Central Prison competition in the manufacture of game boards and the Caron Archerena Co. of Ludington, Mich., are withdrawing from the Canadian market.

The problem of prison labor has not been solved yet, although much has been written upon the subject and a great deal of close study has been given to the question. Prisoners must be made to work at something. From the standpoint of the State they must be made to earn their keep and in order to make it possible for the prisoners to become honest men after their term of imprisonment expires the State must teach them how to earn their living in some trade or calling. Some plan should be evolved to utilize the labor of the unfortunates in some public work in which there would be no product to come in competition with the commodities produced in such industries as the one referred to in London. The prisoners might be set to work on the construction of a driveway on the waterfront, on improving the public parks or highways, in making clothing, shoes, etc., for the militia, mail sacks for the post-office, or in some work in which the public alone is concerned.

Objection will, of course, be raised to allowing the prisoners outside the walls, but the plan said to have been tried successfully in Oregon might be found to work in Canada, the idea being to encourage the prisoners to act as their own guards by adding a week or a month to the term of every prisoner for each one who is allowed to escape.

The subject is a deep one and a satisfactory solution has been a long time in being presented. It is most regrettable, however, that industries are forced to close their doors because of the unfair competition of prison labor.

HARDWARE JOBBERS TO MEET.

NEXT Tuesday the Canadian Wholesale Hardware Association will hold their seventh annual convention in Toronto, the call for the gathering having been issued by President C. A. Whitwam, of the Hobbs Hardware Company, London, and Secretary James Hardy. A large attendance is expected as matters of general interest are to be discussed.

ADVANCE IN TURPENTINE.

Montreal, Oct. 13, 11 a.m.—Turpentine advanced one cent to-day. Market firm and demand active.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 2.

ONE of the oldest and most widely known hardware salesmen on the road is George Ramsden, who makes his home in Port Hope and covers Eastern Ontario for Caverhill, Learmont & Co., of Montreal.

The story of Mr. Ramsden's early experiences reads like a romance. Going on the road at the age of eighteen, he found himself the youngest traveler in the Eastern Townships, at a time when teams and stages furnished the only means of transportation in most districts. He also drove through Prince Edward Island, and worked the Lower Provinces by wagon and boat before the Intercolonial Railway was built. After a few years in this territory Mr. Ramsden was transferred to the upper and lower Ottawa as far as Mattawa, where he still visited many places remote from railways. For the past twenty-eight years he has been covering Ontario east of Toronto.

George Ramsden,
Representing Caverhill, Learmont & Co., Montreal, in Eastern Ontario.

Mr. Ramsden obtained his early experience in both heavy and shelf hardware with Crathern & Caverhill, which firm he represented up to the time of their withdrawing from business. He then became identified with the firm of Caverhill, Learmont & Co., and has remained with them ever since.

One of the first certificates issued by the Dominion Commercial Travelers' Association, thirty-one years ago, bears the name of George Ramsden, and is now one of his most prized possessions. He also holds membership in the Mutual Benefit Society, but in the many years he has spent on the road, he has never been compelled to claim its privileges as he has been free from any accidental injury during all that time.

Mr. Ramsden has been most successful in gaining and keeping the confidence of his customers. To answer this end, he has been consistently straightforward in his dealings with them, and has always represented goods in their true light.

Younger travelers will do well to take hints from these facts and if they need any encouragement to persist in such a line of action it will be found in the word which is quietly and mysteriously whispered by his most intimate friends, that "George has made his pile."

SEASONABLE TRADE GOSSIP.

Nut crackers and picks are a Fall and Winter line.

Some hardware dealers are putting in optical goods. There is said to be a very good profit with little risk.

Get a bargain counter ready right now. It will pick up a lot of stray dimes and dollars during the busy Fall season. It does not require much care, either.

How many electric bell outfits have you sold this Fall? Here is a good line for every town. Other small electric goods can be sold, too, if there is no electric supplies store in your town.

Are you up on the hunting and fishing laws of your Province? Many hardware men find it advantageous to print a synopsis of the game and fish laws on the back of their business cards for distribution. They will usually be preserved carefully.

Sell a good line of cutlery. A pocket knife that breaks the first time it is used is not a trade-winning brand. You may have to ask a little higher prices than with the cheaper lines but the trade will soon learn that the best values are in the medium and high priced goods.

Many hardware men send out canvassers at this time to work the trade for cream separators, sewing machines, washing machines, barb wire and fencing orders. A good man can usually make a profit for the firm by doing this. Fencing is a good line to work. There is money in it and it is needed by every farmer.

Canadians, as a rule, are ardent lovers of outdoor sports and eager and enthusiastic participants in everything of that nature. Shooting and fishing, camping and hunting, boating, snowshoeing and tobogganing, lacrosse and hockey, are all their own by inheritance and they have found no trouble in adopting and adapting themselves to all others. Under these circumstances, the sporting goods trade flourishes and will continue to do so.

PERSONAL MENTION

Ontario.

Mr. W. W. Carter, hardware merchant, of Flesherton, called on Toronto hardware jobbers this week.

Mr. D. H. Howden, wholesale hardware merchant, London, spent a couple of days in Toronto this week.

Mr. William Vallance, of Wood, Vallance & Co., Hamilton, was a visitor in Toronto the early part of the week.

Mr. S. L. McKay, hardware merchant, Kingsville, passed through Toronto a few days ago on his return from a trip to Cobalt.

James Fennell, hardware merchant, Berlin, is in Toronto on business connected with a varnish factory he is interested in.

Mr. F. C. McMaster, hardware merchant, Havelock, has moved into new premises and he is making extensive improvements to the new store.

Mr. James Chalmers, a very popular hardware merchant of St. Mary's, renewed acquaintanceships with many friends in Toronto this week.

H. L. Walker of Port Hope has purchased the hardware business of D. A. Fraser of Norwood. Mr. Fraser intends locating in the west next Spring.

Mr. C. A. Whitwam, of the Hobbs Hardware Co., London, president of the Canadian Wholesale Hardware Association, was a visitor in Toronto this week.

Mr. Frank Eames, Gananoque, who has been in charge of the plating department at the Toronto Bolt & Forging Co. for the past few years, has taken over that branch of the business himself.

Mr. S. N. Burt, who recently purchased the hardware business of J. Woodsworth, 842 Yonge street, Toronto, reports that business is quite brisk, and enlargements are contemplated in the near future.

The price of harness is to go up on account of the recent advance of 15 per cent. in the price of harness leather. A meeting of the Master Harness Makers' Association will be held in Toronto about the end of October.

F. J. Taylor, manager of Western Foundry Company, Wingham, is back at his desk again after six months absence due to nervous prostration. His many friends in the trade will be pleased to hear of his return to business.

Mr. J. W. McDonald, of McDonald & Hay, North Bay, spent a few days in Toronto during the past week, being called here to give evidence in a case regarding the seizure of some furs said to have been taken out of season.

Mr. Joshua G. Beard, an ex-alderman of Toronto, died suddenly in Troy, N. Y., recently, and the news will be received with regret by a large number of old Torontonians who knew him many years ago. He was formerly engaged in stove manufacturing.

Mr. F. B. Hope, formerly with the Hobbs Hardware Co., London, and Frothingham & Workman, Montreal, has purchased the hardware stock of E. R. Rodgers, Toronto Junction, and is now engaged in taking stock and completing the turn-over of the business.

We find that the report that Mr. W. R. Hobbs has severed his connection with the Plymouth Binder Twine Agency is quite without foundation. Mr. Hobbs has just returned from Europe, and although owing to his several interests he is unable to give the Plymouth Agency his detailed attention, he still retains his control of that company and will give it his supervision as heretofore.

Quebec.

E. F. Slocum, of the Pintsch Gas Co., was in Montreal during the week just past.

A. Arel, of Beauharnois, paid one of his periodical visits to Montreal this week.

H. L. Dennison, of Digby, N.S., was in Montreal this week, accompanied by his wife.

Pierre Noel, plumber, of Quebec, was in Montreal a few days ago on a purchasing trip.

Mr. McFarlane, of McFarlane Bros., Campbell's Bay, was in Montreal on business this week.

Mr. A. Robinault, plumber, of Valleyfield, visited the plumbing supply houses in Montreal this week.

Mr. P. O. Casavant, of St. Chrysostome, was a visitor in the Royal City during the past few days.

IT HAS NEARLY EXPIRED.

Only a few days more and the new venture of The MacLean Publishing Company, **The Business Magazine,** will see the light. That means that the remarkable offer made to HARDWARE subscribers a week ago will only hold good for those few days. If you are a subscriber to THE HARDWARE AND METAL you should not omit this opportunity to get the new publication for half the published price—that is for **one dollar** per annum. Send in your name at once to

THE MacLEAN PUBLISHING COMPANY.

H. W. Aird, treasurer of the Canada Paint Co., Montreal, spent a couple of days in Ottawa this week.

Mr. Hope, managing director of Kynoch, Limited, Birmingham, Eng., is a visitor in Montreal at present.

Chas. Baker, tinsmith and plumber, of Prescott, Ont., was in Montreal this week, placing orders for supplies.

Ed. Bonneterre, tinsmith and plumber, of La Prairie, Que., paid a hurried business visit to Montreal this week.

J. E. Seale, general merchant, of Morin Flats, was in Montreal last Wednesday in connection with his business.

Mr. Larose of John Millen & Son, Montreal, is dangerously ill, and the doctors hold out but little hope for his recovery.

J. R. Tirrell, the popular city traveler on the staff of Caverhill, Learmont & Co., Montreal, is spending a few days at Sorel.

Mr. Gervais, of the firm of C. O. Gervais & Freres, general merchants, St. Johns, Que., paid a visit to Montreal this week.

Chas. Milot, general merchant, of St. Monique de Nicolet, called on the Montreal jobbers during the week, purchasing some Fall stock.

Mr. Ten Eyck, Toronto representative of the Atkins Saw Co., Minneapolis, was in Montreal this week and reported his trade to be booming.

Mr. M. Moody, of Matthew Moody & Sons, Limited, manufacturers of agricultural implements, Terrebonne, visited Montreal a few days ago.

W. A. Allan, of Allan, Whyte & Co., Glasgow, Scotland, who has been in this country for a few weeks, leaves Montreal on his return trip next week.

Mr. J. Bardsley, of the Bardsley Hardware Co., New York, was in Montreal this week, calling on Mr. J. Drysdale, who represents the firm in the Canadian metropolis.

J. J. Sophus, of McLean & Sophus, machinery experts and manufacturers' agents, Montreal, has just returned from a successful business trip to New York and Boston.

An important exchange in Montreal's retail hardware trade was almost carried through this week, but a slight hitch in negotiations has delayed its consummation.

The stock of Navert & Lancette, 417 Centre street, Point St. Charles, Montreal, has been purchased by Francis Martineau, who has placed Mr. Bryere in charge of this branch of the business.

Mr. Arthur Picard, of O. Picard & Fils, tinsmiths and plumbers, Quebec, called on the Montreal jobbing houses this week in connection with a large heating contract recently booked by his firm.

Mr. Douglas, purchasing agent for Rhodes, Curry & Co., Limited, Amherst, N.S., was in Montreal this week, accompanied by his wife. Mr. Curry, president of the same company, was also in the city.

W. W. Brown, who has for the past ten years been connected with Drummond, McCall & Co., Montreal, is leaving that firm at the end of the month to accept a position in the invoice department of the Ogilvie Milling Co. Mr. Brown has been a valued man on the staff of Drummond, McCall & Co. ever since his coming to this country, and his services will be greatly missed by that firm.

Western Canada.

The firm name of Davis & Wilson, hardware merchants, Boissevain, Man., was changed to Davis & Hicks on the 11th of September last, Mr. Wilson retiring. Two more hustling and enterprising business men than the present partners would be hard to find, and if an up-to-date store counts for anything they should get a good share of business.

United States.

Mr. William F. Wagner, general manager of Wm. Jessop & Sons, Limited, in the United States, together with Mr. Edward L. Hand, who represents them in Philadelphia; Mr. E. W. Salisbury, of Warren, Salisbury & Nightingale, their agents in Providence; Mr. E. B. Ridgley, their representative in Detroit, together with Mr. F. W. Babcock, of the Standard Oil Co., resident of Providence, sailed on the Cunard steamer Caronia, October 3rd, to attend the 282nd annual gathering of the Cutlers' Company at their banquet in Sheffield on October 12. On this occasion Mr. Sydney Jessop Robinson, managing director of Wm. Jessop & Sons, Limited, will be installed as Master Cutler—a position of great honor and of social and commercial influence.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Pig Iron is stronger and is now quoted at its highest price for the year, $3.80 to $3.90 per hundred pounds.

Merchant Steel, tire has advanced to 2.12½ and toecalk to 2.67½.

Galvanized Iron in some qualities has advanced.

Scrap Lead is now quoted at 2¾c. and scrap zinc at 3½c.

Turpentine is remarkably active, and has advanced to 97c. single barrels, and 96c. for two barrels or over.

TORONTO.

Middlesboro Pig Iron has advanced and is now quoted at $22.

Linseed Oil has advanced one cent per gallon.

Scrap Zinc is up ¼c., now being quoted at 4¼c. per pound.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 13, 1905

THE long continued fine weather has had a somewhat deterrent effect upon trade, for, although the volume of business has been good, it would have been increased beyond a doubt had colder weather occurred. As soon as a break up in the present fine weather is experienced there will certainly be large repeat orders for Fall goods and this will stimulate trade very considerably.

The most notable feature of the week is the added strength of wire nails. The very extensive building operations throughout Canada have depleted existing stocks and consumers will shortly be called upon to pay higher prices. Manufacturers have already advanced their figures to the jobbers and these cannot long sell at current prices except at a positive loss.

Lanterns are going out in fine volume, but these are mostly repeat orders, so that the jobbers have not yet advanced prices in spite of the withdrawal of figures by the manufacturers.

All hardware staples are in excellent demand and a great impetus has been given to the market and Christmas specialties owing to the near approach of the season for these goods.

Rifles, shot guns, and ammunition are still well to the fore in the orders received by local houses, but they are more and more being crowded for first place by skates, sleigh bells, and horse blankets.

Axes—These goods are going out nicely, orders being received in good numbers. We quote prices as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles— Our prices are: Axe handles No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Sales have been normal and prices are unchanged being still quoted: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—We quote: Cold blast, $4.50, No. 0, Safety, $5.00.

Rivets and Burrs—In common with all hardware staples these lines are enjoying a good run. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws — We quote prices as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—There is a normal demand, with prices as follows: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Horse Nails—Good orders are being shipped freely, current prices being: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—Considerable activity has developed during the past week and there is every indication of an early advance, such having already been made by the manufacturers. We quote: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—Price is still $2.20 per keg, f.o.b. Montreal.

Horseshoes—The volume of business is most satisfactory, showing good orders from all parts of the country. Our quotations are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Ammunition is of course in splendid demand. Prices generally quoted being as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—The demand is pretty well distributed throughout the country and is very satisfactory. The good crops which have just been harvested have given encouragement to building activity with the result that a steady, though not phenomenal trade is being done by local dealers. There are no changes in price, which are just as given in our current market quotations.

Cordage—Conditions are rather quiet and prices remain steady.

Cement and Firebrick—There are numerous jobbing orders constantly coming to light, but no job of any size is now going on which would call for particularly large quantities of these goods. We quote prices as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain— We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—Sales are somewhat disappointing this season, but prices remain steady as follows: Little Star, $4.85; Hudson, $5.00; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—A splendid demand is shown by the large shipments which are being made daily by all local wholesale houses. Prices remain from 25c. to $2.50, according to quality.

Sleigh Bells—A good volume of business reported earlier in the season still continues. We quote as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes— The market has quite awakened, and it is evident that the hardware trade will in all parts of the country make this one of their features during the coming winter. Prices range from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Oct. 13, 1905.

OCTOBER is largely a sorting up month in the hardware trade, and while many shipments are hurried on account of the closing of navigation, the bulk of the business in winter lines is not sent in until November when merchants who have not stocked up fully in horse blankets, sleigh bells, chains, skates, etc., will send in their final orders. A good deal of business is being done, however, in these lines at present and this together with a heavy business in builders' hardware and heavy goods, such as bolts and nuts, is making the October business most satisfactory to the jobbers. Merchants throughout the entire country are very optimistic and a splendid trade amongst farmers is looked forward to during the winter.

The demand for guns and ammunition is still holding on while rifles and cutlery are also being ordered in considerable quantities by merchants who stocks have run short on some lines owing to the heavy demand for these goods. A great many merchants are also ordering silverware and other specialties for the holiday trade.

Although there has been a tremendous run on wire nails during the active building season which is nearing its close, manufacturers have been well able to handle the business and no advance in prices has been made on the local markets on account of shortage of supplies. Building paper and weather strip are two lines which are in very active demand. There are no change in prices to report, the quotations on lawn mowers for 1906 not having been agreed upon as yet.

Sporting Goods—Imported shells are being called for in large quantities. Rifles are increasing in demand, while the call for shot guns and ammunition keeps up well. Fishing tackle is also being bought liberally.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chains and other Fall lines are selling well. 1-4 inch, $6.50 5-6 inch, $4.45 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Ladders are being called for actively and more than the average Fall trade is being done. We quote: Step ladders at 10c per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Barb and Coiled Spring Wire—Trade is falling off, the bulk of the season's business having been done. No change in quotations.

Wire Nails—Demand continues very keen, but quotations remain the same. While cost of materials is advancing there is no talk of a rise as yet.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Axes—Blades and handles are being bought largely and a most satisfactory winter trade is looked for.

Horseshoes—Prices continue unchanged with the outlook for business excellent. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow. No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—Blacksmiths are ordering in large quantities and dealers have no complaints to make.

Cutlery—Case goods and carvers have been the favorite lines. Some dealers are still sending in sorting orders.

Skates and Sleigh Bells—Merchants are ordering well, particularly for sleigh bells.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—The possibility of higher prices is giving an impetus to trade. Prices remain as before.

Bolts and Nuts—An increase is looked for by some on account of the advancing prices for iron. Mills have plenty of business.

Cordage—Sorting orders are being received. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—A scarcity exists owing to the heavy demands of the past season, and prices are very firm in consequence. We quote: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—Demand is increasing. Quotations are firm, but prices unchanged. We quote as follows: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Business is active, the heavy building being done calling for a large quantity of goods. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool—The demand for hides continues good, easily absorbing all arrivals. Prices, however, are causing a good deal of dissatisfaction as it is almost impossible to do business on a profit basis. On present prices sufficient margin is not in evidence to cover expenses. U.S. prices with freight added are about same parity as Canadian quotations, making it impossible to advance. We quote:

Hides, inspected, No. 1 per lb.		0 12
" " " 2 "		0 11
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected		0 14
" " No. 2		0 12
Lamb skins and pelt, best city slaughter		0 95
Rendered tallow, per lb.	0 0½	0 0¼
Unwashed wool, per lb.	0 1½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	C 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, October 13, 1905.

ANOTHER week of great activity in metal has just closed. Once more nearly all metals have been stiffening and while not so many advances are reported for this week there is every reason to believe that the immediate future will see the withdrawal of present prices.

Copper is still holding up firm without any sagging movement. There is no prospect of any change in prices.

Antimony declined slightly in tone, but not sufficiently to permit of jobbers reducing their prices.

Tin is very firmly held at the price quoted and the market is high. The early part of the week witnessed a slight weakening in this metal, but it has now fully recovered. Cable advices received from the Old Country on the day of writing, show advances in price.

Pig lead is still on the upward move and at the quotations we give this week it has reached high water mark for the year.

The iron and steel market continues very strong and the big companies are now insisting on a time limit to change of specifications on contracts accepted by them. This betokens a rising market, as, generally, specifications may be changed very easily by the buyers.

Pig iron remains at our last week's quotations. Trade is fair, but no very large orders have been booked. The market in Scotland is easing off somewhat and it is said that prices will not go higher for some time at any rate.

Galvanized iron is remarkably firm with a decidedly upward tendency. In fact all sheet metals are very strong and some of the biggest jobbing houses are considering the advisability of immediately raising their prices.

Owing to the activity in the primary market a couple of grades of merchant steel are now quoted higher by the producing mills.

Zinc is still very firm at prices given last week. There is a report current that the mines have so many orders on hand as to prevent them from selling at present.

Canada Plates—In common with all grades of sheet metal Canada plates both galvanized and polished are enjoying great demand. The strength of the market is such that an advance may occur at any minute. Our prices are 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—No falling off has been reported in the demand for copper and as

LAFARGE (non-staining) CEMENT

for setting, pointing and backing Limestone, Granite or Marble where freedom from discoloration is desired. Send for descriptive catalogue.

Drain Pipes, Sewer Bricks, Fire Bricks, Building Bricks, Portland Cement, Road Paving Bricks and Blocks.

Wholesale Merchants

Ormidale Block, Vancouver, B.C., and Liverpool, England

Direct Importers of:

Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc, etc.

there is not yet any surplus of supply our quotations remain firm at the following prices: Ingot copper, 17 3-4c.: sheet copper, 24 3-4c.

Ingot Tin—After somewhat easier conditions for a few days tin has again taken a jump and our figures quoted last week are still in order. We give the following prices: 36c. to 36 1-2c. per pound.

Pig Lead—This metal is in the midst of another boom and it has now reached its highest price for the current year. We are quoting $3.80 to $3.90 per hundred pounds.

Boiler Tubes — We quote prices as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c., 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—The Old Country market is now easing off a little with the result that no further advance in price is expected at the present time. The Canadian trade is fairly active, but no great tonnages are reported. We quote:

"Disc," No. 1	$16.50	delivered Montreal.
"Dom.," No. 1	17.50	" "
Usual difference in price for lower grades.		
Ferrona No. 1	$18 00	delivered Montreal.
" No. 2	17.50	" "
" No. 3	16 50	" "
" No. 4	16.00	" "
Londonderry	$18.75 to $19.25	" "
Glengarnock	18.25	" "
Gartsherrie	19.25	" "
Carnbroe	18.50	" "
Carron No. 1	20.00	" "
" (special)	18.50	" "
Ayresome No. 1	18.75	" "
" No. 3	17.75	" "

Clarence No. 1	18.50	" "
" No. 3	17.25	" "
No. 1, Cleveland	17.50	" "

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—Some further advances have taken place this week and we are now quoting as follows: Sleigh shoes, $1.97 1-2, tire, $2.12 1-2; spring, $2.75; toecalk, $2.67 1-2; machinery iron finish, $2.07 1-2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—There is still a remarkable firmness in this market. Indeed there is a decided disposition to raise prices and this has already been done in one case. Gorbell's "Best Best" 28 gauge is now quoted from $4.15 to $4.40. A general advance may be looked for. We quote : Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet. 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's

SITUATION WANTED.

BY cut ery man, with fourteen years' experience in the wholesale and retail cutlery business; could take charge of cutlery department in either wholesale or retail store; Western Canada preferred; references given. Box 275, HARDWARE AND METAL. [41]

WHOLESALE AGENTS WANTED.

ONE of the largest and oldest European manufacturers of Cream Separators and Dairy Machinery is desirous to arrange with one large and first-class firm for each of the Provinces in Canada for the sale of their goods. Send particulars and references to A. B. C., c/o HARDWARE AND METAL, Toronto. [41]

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Port Burwell Breakwater," will be received at this office until Friday, November 3, 1905, inclusively, for the construction of Breakwater at Port Burwell, in the County of Elgin, Ontario, according to a plan and specification to be seen at the office of the Resident Engineer, Confederation Life Building, Toronto, at the office of the Resident Engineer, London, Ont., on application to the Postmaster at Port Burwell, Ont., and at the Department of Public Works, Ottawa.

Tenders will not be considered unless made on the printed form supplied, and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for seven thousand dollars ($7,000.00), must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, October 3, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (42)

SAVED—LOST.
One cent saved often means Dollars lost. Don't fail to send a Post Card to our advertisers asking for full information about their goods. Don't buy with your eyes shut. Mention Hardware and Metal.

"Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—This line will almost certainly be advanced within a few days as one of the largest local interests is contemplating the withdrawal of current prices. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony— There has been a slight weakening in tone but we are still quoting: 14 3-4 to 15c. for Cookson's.

Tin Plates—Jobbers have again been forced to give higher prices for plates, but have not as yet advanced their figures which are still: Cokes, $3.75; charcoal, $4.

Ingot Zinc—This is well held at the advanced figures reported two weeks ago. As it is said that the mines are not accepting any orders for definite delivery it is likely that another advance will take place shortly. We quote: 6 3-4c. to 7c.

Sheet Zinc—We are still giving the following figures as the ruling prices: No. 8 and No. 9, cask lots, 7 1-2c.; less than cask lots, 7 3-4c.

Bar Iron—The advance reported last week still rules, and in fact, these figures have if anything been strengthened during the past week. Our quotations are $1.87 1-2 base, f.o.b. Montreal.

Scrap Metal—The mills are not yet buying locally, to any extent, the inference being being that they had good stocks on hand previous to the recent advance in raw materials. Under these circumstances, wrought iron is an uncertain quantity in anticipation of the entrance of the mills into the market very shortly. The price will then be set. Old rubbers are scarce, and may possibly command higher figures if the manufacturers should display any activity. We are quoting: Copper wire 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 1-2c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 6 1-2c. to 6 3-4c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 13, 1905.

BUYERS are getting used to high prices of metal and are purchasing more freely than they have been doing since the recent advances in the various metal quotations. Business is improving, every line being included in the activity. The recent advance in bar iron has held quite strong and the volume of business being done is most satisfactory. The only advance we have to report this week is the increase in the price of Middleboro pig iron which is now quoted at $22 per ton in Toronto. Antimony and spelter have both been especially active during the past week, while copper, lead and ingot have also shown considerably activity.

Pig Iron—Prices strong and an advance has been made on Middleboro owing to the increased cost of production. Great strength is shown in the existing market. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 00
Londonderry, at furnace	16 50 to 17 00

Pig Iron—Very strong and an adheld firm and a large volume of business is being done. We quote as follows: $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—Market is active and demand very keen. Quotations have fluctuated, but are now steadier.

Tin Plates— Demand is active with considerable strength shown in prices.

Galvanized Sheets—Trade is very active and higher quotations are looked for.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Stocks continue light and buying heavy at unchanged quotations. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Demand is more active, the market showing more strength than a week ago. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Business being done is quite large, no falling off in the demand being reported. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Greater activity is shown than a week ago and prices are firm.

Old Material—Scrap zinc has advanced 1-4c., but as large shipments are on the water the jump is expected to be only temporary. Copper is very strong, but lead is not so much in demand. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9c. $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $7.50 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 1-4c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Possibility of a strike in both the anthracite and soft coal fields is giving considerable strength to business, even at this early date. The scarcity of cars is the chief difficulty to be overcome. We quote as follows: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, October 12, 1905.

OUR monthly blast furnace returns show that production in September, in spite of the fact that it was a short month, was 1,898,873 gross tons as compared with 1,843,673 gross tons in August and 1,741,935 tons in July. Returns from all the steel companies make their pig iron product 1,262,033 tons in September against 1,186,050 tons in August, an increase in spite of the fact that the Pittsburg district produced only 449,632 tons in September as compared with 488,119 tons in August. The returns indicate that the merchant furnaces did not do as well in September as expected, their production having been 657,623 tons, while they made 636,840 tons in August.

The capacity at work has increased in September and stood on October 1 at 445,468 tons per week as contrasted with 412,563 tons on September 1.

There is the promise, therefore, of an increased production, which the country needs so sorely.

There has been a good deal of buoyancy in the pig iron markets in all parts of the country and prices have been further advanced. A growing number of furnaces hesitate about committing themselves heavily for the future, in view of the considerable rise in costs. Some of the large foundry interests have bought quite heavily. In the west the International Harvester Co. have purchased between 45,000 and 50,000 tons, 20,000 tons from an Alabama interest, 7,000 tons from Virginia producers, and the balance from northern furnaces. Three cast iron pipe concerns have taken very close to 50,000 tons between them, and there has been some very good buying by the general foundry trade, a Pittsburg melter taking 11,000 tons.

Quite a number of eastern open hearth plants are negotiating for additional quantities of basic iron, one of them being in the market for 1,200 tons, and the others for somewhat smaller lots. While the buying of Bessemer and basic iron in the central west has been rather light during the past week, it is known that two large steel interests are figuring on the purchase of some large blocks for the first six months of next year.

Some further goodly orders have come to the rail mills, including 45,000 tons additional from the Northern Pacific, 35,000 tons from the Great Northern, 29,000 tons from the Minneapolis & St. Louis and 13,000 tons from the Kansas City, Mexico and Orient. Manufacturers of frogs and switches have ordered between 10,000 and 12,000 tons, and if is reported that one of them has been forced to place a small order for girder rails abroad in order to secure prompt delivery. Another maker in this branch is studying the question of drawing a very considerable supply of girder rails from Germany. A fair proportion of the New Haven order has been allotted, but the whole of it has not yet been given out.

A good deal of business is pending in bridge material, fully 60,000 tons being under negotiation. The Atchison road has just placed 16,000 tons, and the order for 7,000 tons of material for the Saybrook bridge of the New Haven road has been also taken by the American Bridge Co. Small quantities of foreign structural material are being ordered for prompt delivery.

In the eastern skelp trade, an order for 5,000 tons, the first for many months, is regarded as the harbinger of better times.

The lighter lines are active and in good shape, and even the tin plate trade is showing signs of renewed life.

Reports from Europe continue very encouraging. There has been a smart advance in the prices of plates, structural material and bars in England, and the revival there is reflected by quite a pressure upon our producers here to sell material. This, however, they decline to do beyond well defined lines.

LONDON METAL MARKETS.

From Metal Market Report, October 11, 1905.

Pig Iron—Cleveland warrants are quoted at 52s. 9d, and Glasgow standard warrants at 51s., making prices as compared with last week 9d higher for Cleveland warrants and 9d higher for standard warrants.

Tin—Tin opened firm at £147, futures at £146 2s. 6d, and after sales of 170 tons of spot and 170 tons of futures closed firm at £147 2s. 6d for spot and £146 5s. for futures, making price as compared with last week £1 9s. 6d lower on spot and £1 10s. lower on futures.

Copper—Spot copper opened steady at £71 10s., futures £70 5s., after sales of 100 tons of spot and 200 tons of futures closed quiet at £71 10s. for spot and £70 5s. for futures, making price as compared with last week 5s. lower on spot and 10s. lower on futures.

Lead—The market closed at £14 12s. 6d, making price as compared with last week 5s. higher.

Spelter—The market closed at £28, making price as compared with last week 7s. 6d higher.

MINES AND METALS.

The first Wabana, Newfoundland, ore received on the northeast coast of England was recently unloaded at Connal's wharf, Middleborough, for the Northeastern Steel Co., Limited. The cargo amounted to 4,500 tons and was obtained from mines owned by the Nova Scotia Steel & Coal Co. and the Dominion Iron & Steel Co.

* * *

By a vote of 236 for and 93 against, the Nanaimo coal miners have decided to return to work. The agreement between the company and the men is in the nature of a compromise, each side conceding something. It is for a period of two years, which means that for that period of time Nanaimo will be free from the evil results of strife between capital and labor.

* * *

The Dominion Coal Company, which has been making a number of improvements during the past summer, has decided to substitute electricity in place of steam in their various Cape Breton mines. This power will be used for hoisting, hauling, and other purposes, and the plant will, it is understood, be a large one. Tenders are already being asked, and the contract will be awarded next week. From now right to the end of the season of navigation it is expected that the company's shipments to Montreal will show quite a large increase over the corresponding period of last year.

Profits that go to other tradesmen would come to you if you brought "Eastlake" Metallic Shingles to the attention of intending builders more aggressively. Why not get after these people?

The advantage of "Eastlake" Metallic Shingles over wood shingles is such a simple story of fact that prospective builders have but to listen to be convinced.

Their fireproof qualities, resistance to rust, storms and lightning, and their longer wear appeal direct to the pocketbook.

The free samples which we will gladly send you make it very easy to get orders when a prospective builder is once made to realize how much better "Eastlake" Metallic Shingles really are than wood shingles.

There's money in this trade.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Oct. 13, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

WHOLESALE hardware trade is very active at present, there being an especially heavy movement of heavy goods before the close of lake navigation. Price changes are not numerous this week, but they are important. Wire nails have declined 15c. per keg and they are now quoted at $2.60 per cwt. for all quantities. Cut nails are still quoted nominally at $3 per keg and owing to the high price there are none selling. Barb wire has been advanced 15c. per cwt., as also plain twist and staples. Until the close of navigation business will be very heavy.

Lanterns—Wholesale prices are steady and unchanged, but retail trade is still demoralized. We quote:

Cold blast lanterns	$4 75	per doz.
Coppered cold blast lanterns	6 75	"
Cold blast dash "	7 25	"
Lift Lanterns	4 25	"

Wire—Barb wire has been advanced 15c. per cwt. Plain twist has also been advanced 15c. and staples have been marked up a similar amount. We quote:

Barbed wire, 100 lb		$3 00
Plain galvanized	6 to 8	3 39
"	9 2 50	2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		3 00
Staples		3 50
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
Oiled annealed wire	14	3 30
"	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Business continues very active and large quantities are being booked for delivery before the close of navigation. The price has declined to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c
Pure fibre, plain	60c.
" " tarred	80c

Ammunition, Etc.—Sorting orders are still coming in. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—As mentioned last week there has been an advance in solder and it is now quoted at 21c. per lb. with concessions for large quantities.

Iron and Steel— Prices are quoted as follows :

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 16 gauge	4 60
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX " "	11 50
" XXI " "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price is now $7.75 for cask lots and $8.25 for less than cask lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote

Black iron pipe, ¼ inch		
"	¼ "	2 45
Black iron pipe, ⅜ inch		2 65
"	⅜ "	3 00
"	½ "	3 80
"	¾ "	5 50
"	1 "	7 45
"	1¼ "	8 95
"	1½ "	12 30
"	2 "	

Petroleum—No change since the advance noted last week. We again quote:

Silver Star, per gal	21c.
Sunlight "	22c.
Eocene "	24c.
Pennoline "	25c.
Crystal Spray "	24c.
Silver Light	22c.
Gasoline, 74 76	27c.
Gasoline, 70-72 (Indian)	25c.

(In barrels f.o.b. Winnipeg.)

THE GREAT WEST WIRE FENCE CO., Limited

Sole Owners for Dominion of Canada for Rankin Patent Wire Lock

Patented June 30th, 1903

Office and Factory 76-82 LOMBARD ST., WINNIPEG, Manitoba

Manufacturers of

Railway, Farm, Lawn and Ornamental Fences

Field erected type and all made of No. 9 Hard Coiled Steel Wire. Easily erected and sold in quantities to suit purchaser. Liberal discounts to dealers handling our goods. Also manufacturers of

Steel Farm and Lawn Gates

and dealers in fencing tools of all descriptions.

MALTHOID ROOFING

USED ALL OVER THE WORLD,

Does not require a protective coating of paint at time of laying. Anyone can lay it. Nails, Caps and Seam Cement supplied with each roll.

16 to 95 "	17.30
6 to 100 "	

It is time to put up stoves, and the pushing dealer ought to get lots of trade in this line, as new parts are generally in demand, to say nothing of furnishing pipe, elbows, stove boards, coal hods, etc.

INTERESTING EXPERIMENTS.

IN these days, when the question of electric railroads is up in all countries that have the natural conditions for them, the following comparing experiments with steam and electric locomotives may be of interest to Canadians :

On the wide track road which runs from Sannesund up to Hafslund station in the southern part of Norway, and which has a grade of 1.30 metres, with a smallest radius of 1.60 metres, there are run both electric and steam locomotives, and the company operating the road has had the following experience : A steam locomotive of 90 tons weight pulls only with the greatest difficulty two freight cars loaded with 10 tons up the hills, and when the rails are wet from rain the locomotive frequently has to back up and make a new start to go up. On the other hand, the electric locomotive of only 22 tons weight pulls six such loaded freight cars easily up the hills, even when the rails are wet, and on a side-track with a rise of 1.26 metres the electric locomotive pulls four loaded cars. When the steam locomotive with its cars has come to a stop on the above-mentioned grade, its ability to get a new start discontinues, as the wheels slide on the rails, but the electric locomotive, after such a stop, has no difficulty in getting a start with its full-loaded freight cars. The experience obtained on this road thus confirms the ability of electric locomotives to go up heavy grades, and they should therefore to a large extent be practical for helping steam locomotives with larger trains up grade.

STILL SHOWING HER HEELS.

NOT only was Great Britain's export trade during the first half of the present year larger than that of any of her competitors, but the increase in comparison with the same period in 1903 was great.

This increase was £13,200,000 in Great Britain, £9,700,000 in the United States, £10,800,000 in Germany, and £7,700,000 in France.

In spite of the great expansion which has taken place in the trade of her competitors, Great Britain is still the centre of the world's trade and commerce, and she is likely to be so for some time to come. With her smaller population she can hardly be expected to maintain it for all time, but it is a source of gratification to know that in the race for foreign business the Mother Country is still showing her heels to the nations that are trying to outstrip her.

GRAND TRUNK PACIFIC TENDERS.

It is now announced that the successful tender for the two hundred and ten mile section of the Grand Trunk Pacific between Fort William and Lake Superior Junction involved the sum of about $3,000,000. This is for grading and construction of the roadbed alone, the great cost being occasioned by the extremely wild country through which this branch line will pass, one place necessitating a cutting of 128,000 yards.

The successful tenderers are Foley Bros. & Larson, who will, it is stated, sublet about two-thirds of the work to other contractors, probably stipulating that they purchase their supplies and implements from their firm, which is one of the largest in the west. As their profit on these will be in the neighborhood of forty per cent., their total returns should be very considerable.

Foley Bros. & Larson are practically a Canadian firm, for, though their interests have lain chiefly in the United States, since the completion of the Canadian Pacific Railway, they have, nevertheless, a large branch doing business in the Canadian Northwest, with Winnipeg as their headquarters.

PURCHASE OF A CAN FACTORY.

The Acme Can Works, Montreal, have bought out the British American Can Co., Sarnia, Ont., and removed the plant to Montreal. This purchase completes one of the best equipped can factories in America and will enable the Acme Can Works to fill their orders with increased despatch. The business of the Acme Can Works during the past few years has expanded to such an extent that a new building will shortly be erected, 85x100 feet with three stories, and enable them to store at least 8,000,000 cans. The daily output of the plant will be 165,000 cans. In addition to the manufacture of cans the Acme Can Works are installing a plant for the manufacture of wire and solder, which lines they have been obliged to import heretofore. When completed it is considered the plant will be the most modern on the continent and fully able to attend to the requirements of the trade in the busiest of seasons.

AUTOMOBILE TRADE.

The hardware merchant who overlooks the automobile business is making a mistake. It is an excellent thing, if a possibility, for a dealer to own a machine of his own, and if he does, to buy one for which he can secure the agency. His own machine will then answer a double purpose. It will permit of his getting about the country rapidly and also be a sample for him to sell by. The automobile business, like electricity, is in its infancy. There is a great future in it. The young man who makes a study of it is certain to find himself in demand, and the dealer who early takes hold and pushes the trade, is going to reap a reward.

Nova Scotia Trade News

Halifax, N.S., Oct. 11.

TRADE conditions generally have improved greatly since last report. In fact it might be said that a boom has set in in the hardware business. One dealer in speaking with your correspondent to-day said that the rush of so many orders was most unexpected. Buyers had been holding off till the very last moment hoping for more favorable prices, and it seems that the idea struck them of sending their orders in all at one time. Naturally the dealers were a little surprised at the sudden change, but they are greatly pleased nevertheless.

In lumbering goods the trade is particularly bright. The orders coming in are for tree saws which now replace the axe in many of the large lumbering concerns throughout this Province. Heretofore the axe was used almost exclusively. In cutting a tree with an axe several feet were lost, as it would be taken off some distance above the stump. Now the tree is sawed close to the ground and the operator saves many feet of the best lumber. Another feature is that it leaves the forest in better condition for travel for the teams. The western part of the Province is practically doing away with the axe altogether. Peeveys are also finding good sale, as well as coil chain. This is used principally by the lumbermen for booming logs. Saw bits for rotary saws, lacing and leather belting are included in the orders to hand.

With regard to prices, metals are very strong but in other lines there is no very marked change. Sheet lead, sheet zinc and pig lead are very firm. The demand is good, but dealers show no inclination to sell, neither do they care to quote prices on these metals. The jobbers say that if they let their stock go, they cannot replace it for the wholesale prices now quoted.

The steamer Phoenix arrived at North Sydney on Saturday from Glasgow, Scotland, with a cargo of brick, fire clay and manganese ore for the Nova Scotia Steel & Coal Co. The steamers Olaf Kyrre and Lark, the former from Spain and the latter from Sweden, are at North Sydney discharging iron ore. The latter ore is the heaviest ever received there, its weight being three times as great as that of the Wabana article, bulk considered, and it contains one-third more iron. Owing to its great weight considerable difficulty has been experienced in discharging the Lark, the main shaft of one of the cranes on the ore pier giving away as a result of the strain.

The find of clay on the property of Charles L. Campbell at Baddeck is said to be of good commercial value, as it contains a composition found in no other mineral. It has been called "Baddeckite" by the Nova Scotia Mines Department. An agent of the Standard Pipe Works at St. Johns, Que., has been at Baddeck recently inspecting the deposit, and has taken a sample of the clay back to the works for the purpose of testing it. If the test is satisfactory the deposit, which is a large one, will be developed.

The Transcontinental Railway Commissioners who were in Sydney last week visited the steel works and saw the rail mill in operation.

Geo. McAvity, C. N. Skinner, A. I. Trueman and A. H. Barnhill, of St. John, and James Barnes, of Buctouche, are seeking incorporation as the New Brunswick Coal Co., Limited. The capital stock is to be $25,000.

British Columbia Trade News

Vancouver, B.C., Oct. 6, '05.

HENCEFORTH it will not be for lack of information that a duty on lumber will be denied the mill men of British Columbia, for a more exhaustive presentation of their case than that placed before the Tariff Commission could not be made. In fact the Commission devoted the greater part of the time they sat in Vancouver to hearing arguments pro and con. The lumbermen traversed the ground made familiar by numerous attempts to impress the Federal authorities of the injustice of having no protection against importations of rough lumber, while the mills of the coast States have every protection accorded them by the U. S. tariff.

The ground taken that the lumber industry is apparently singled out as the only one accorded absolutely no protection was emphasized. The preservation

of the market of the Canadian Northwest for British Columbia mills was urged as imperative if the lumbering industry were to prosper and increase. The Northwest, it was pointed out, looked to this Province for a market for a large part of its produce, and a fair return was that the lumber trade of the Northwest should be held for the B. C. lumbermen. In connection with the effect of a duty in raising prices, the millmen argued that there was so much opportunity to engage in lumber manufacturing that it was not at all likely that prices would be raised. As to shingles, while admitting that very few were imported from the U.S. while B.C. mills sent a very large quantity into the markets of the Eastern States every year, it was pointed out that quality was the factor which made the demand for the B.C. shingles across the line. As soon as the quality fell to a level of that product on Puget Sound, the U.S. shingle mills could invade the Canadian field, unless a duty was put on to anticipate such a contingency.

The boards of trade of Victoria and Vancouver strongly upheld the case of the lumbermen, urging the importance of the lumber trade in the commerce of the Province, and comparing the situation here with that in eastern Provinces, showing that a large part of British Columbia commerce was made up of products shipped out of Canada, and that Eastern Canada was but a small customer for that which this Province produced, with the single exception of the lumber. Incidentally, some argument for better subsidy terms was made a factor of the argument, while in answer to one of the commissioners, a lumber delegate gave the opinion that reciprocity with the U. S. in lumber would be no great aid, as the mountain mills were so situated that they could not compete favorably even if the U. S. market were thrown open. The point was also impressed that the U. S. mills simply made the Canadian territory a dumping ground, slaughtering there what could not be absorbed locally. This has the effect of getting rid of a surplus which would otherwise have to be carried at heavy cost, and also of providing means to keep the mills going all the time.

Alderman Williams, of Vancouver, representing the Trades and Labor Council, presented the views of the workingmen opposing the proposed duty on two grounds, that the price of lumber would be raised and that the millmen were not entitled to sympathy, as they employed cheap Oriental labor, while the Puget Sound mills employed higher priced white labor entirely.

* * *

To make Vancouver a great shipping port, as its natural advantages fit it for, was the tenor of a memorial presented to the Transportation Commission by the Vancouver Board of Trade. The fact that here is a great harbor, capable of accommodating unlimited quantities of shipping, landlocked and protected from storm and open all the year round, was duly impressed. Pointing out the circumstance, which the board regretted, that a large part of the best water-front of Vancouver harbor was in the hands of a great corporation, the C.P.R. Co., the memorial urged strongly that a broadly conceived plan to make of this port a great harbor for world's commerce should be adopted, not only with present requirements in view, but looking to vastly increased demands of the future.

Members of the commission went very minutely into the statements as to the ownership of the waterfront of the harbor, and asked questions concerning the conditions on which the C.P.R. Co. had disposed of any portions of its harbor frontage. It was brought out that penalty clauses in all conveyances expressly prohibited leasing the water frontage for wharfage for any opposing line of steamers to that controlled by the C.P.R.

* * *

By the next Australian steamer to sail, the Miowera, no less than 800 tons of agricultural machinery from Eastern Canada will be sent to the Commonwealth. The unusually large shipments may in part be accounted for by a desire to anticipate the duty handicap which it is the avowed intention of the Australian Federal Government to place on freight charges as well as invoice values on goods from Eastern Canada. This matter has been referred to previously, and if present reports are final, the effect will be serious on exports from this port to Australia, for eastern manufacturers will find it an economy to ship from Atlantic ports, thus saving the duty on the heavy freight charges across the continent.

A LONG TRIP

FOR 25 CENTS.

From the Atlantic to the Pacific is a long trip, and if you were to call on every hardware merchant, store and tinware dealer and plumber it would take about three years and would cost you about ten thousand dollars.

HARDWARE AND METAL makes the trip every week.

Have you a message you wish delivered?

Have you a business for sale?

Do you wish to secure a new clerk?

Do you want anything in which a hardware man or plumber would be interested? If so, place it in the paper he reads.

The cost is a mere bagatelle.

2c. per word for each insertion.

1c. per word for subsequent insertions.

* * *

Commenting on the reported decision of the Minister of Justice that no interference would be the policy with respect to the B. C. Government's tax on commercial travelers from the east, a member of the Cabinet said that the matter would probably be discussed before the next session of the Legislature. It is strongly held here by business men that there is nothing unfair in the tax, considering that such a large trade in this Province is secured by eastern houses, while local wholesale houses and manufacturers, in common with all business houses in the Province, are taxed direct on their trade and stocks by the Provincial Government. It is, perhaps, not very generally known in the east that direct taxation exists in this Province, and every business concern is assessed and taxed by the Provincial Government in its efforts to eke out an insufficient subvention from the Dominion treasury.

Business Changes

Ontario.

George W. Kitchen is advertising his blacksmith business for sale at Paris.

Leduc & Gauthier, tinsmiths and roofers, Ottawa, have dissolved partnership.

H. Howard & Co. have sold out their hardware business at Listowel to R. K. Ross.

Wm. Wyatt & Son, London, are advertising their stove and tinware business for sale.

Quebec.

Bernier & Bedard, roofers, Montreal, registered.

Picard & Lalonde, electricians, Montreal, registered.

Ed. Pascal, blacksmith, St. Frederic, has been burned out.

Lefaivre & Taschereau have been appointed joint curators to L. C. Giguere, hardware merchant, Quebec.

Western Canada.

J. A. Watt, contractor, Calgary, has assigned to C. S. Adams.

G. D. Wallace, hardware merchant, Cambrose, has been succeeded by Wallace & Burgar.

W. Briggs, machinist, Portage La Prairie, has sold his business to Portage Iron Machine Co.

Joseph Sparling, agricultural implements, Roland, is advertising business for sale.

New Brunswick.

Frank B. Wilson, blacksmith, etc., and W. L. Wilson, carriage repairer, have been succeeded by Wilson Bros.

A PROGRESSIVE FACTORY.

A firm that has made remarkable progress during the last few years is J. S. Loughead & Co. of Sarnia, manufacturers of hubs, spokes, and bent goods. The firm was established in 1867 in Sarnia at a time when that section of the country was very sparsely populated, but amid all the vicissitudes of trade the business has steadily grown until now it has one of the largest and best equipped factories of its kind in Canada. The firm have made a reputation for putting nothing but the best material into their goods and everything that goes out of the factory carries with it a guarantee of good material and workmanship. The business is now managed by Mr. F. J. Loughead, son of the founder, and a prominent citizen of Sarnia. The firm have the best transportation facilities both by water and rail. They have a very complete and attractive catalogue which will be sent free on application.

SNOW SHOES.

The first snow shoe catalogue to come to our notice is that just issued by Frothingham & Workman, Limited, Montreal. This firm make a specialty of snow shoes, and the popularity of this feature has been so great that they are planning for a great extension of business in this line during the coming season. Six different grades of snow shoes are illustrated in their catalogue, which will be sent to any of our readers on request.

PAINT, OIL AND BRUSH TRADES

LINSEED OIL TARIFF.

CANADIAN producers of linseed oil are expected to bring the matter of increased protection for their industry before the Tariff Commission when it sits in the east. According to the trade statistics for the fiscal year ending June 30 last the imports of vegetable oil from Great Britain were $609,-387, an increase of $282,055, linseed oil making up a large part of this increase owing to the closing of the Canadian mills.

The Dominion Linseed Oil Company has four mills, one each at Baden, Elora, Owen Sound and Montreal. The company is capitalized at $450,000, and the claim is made that after losing $25,-000 in the previous year, it has been considered wise to close down. There are two other mills, one at Montreal and one at Winnipeg. The situation, as explained by Mr. Livingston, president of the Dominion Linseed Oil Company, is that before 1878 the duty was 17 per cent. Now it is 25 per cent., but the preference reduces it to 16 2-3 per cent. on imports from Britain, the chief source of supply. Seed is grown in the Northwest and a portion of the domestic supply went to each mill, but there was not enough to keep all going and some seed had to be imported.

Owing to the high freights to the west on the imported article, the Winnipeg mill has not felt the competition so much, as its supplies are close at hand. Britain's supplies of seed used formerly to come mostly from the British East Indies, but South America is now a great producer, and also supplies Britain though the South American product does not yield such high-class product as the British East Indian seed. Millers complain that oil from South American seed should not get the benefit of the preference, even coming from British mills, but in reply British millers state that it is mixed with oil from British East Indian seed and the preferential duty is applied. Then this year's conditions have been peculiar; the Rockefeller control in the United States market cornered the seed there and put prices up, at the same time drawing some Canadian seed by their high price, thus reducing our supply of raw material. Then the British prices for oil have been abnormally low, so that the ad valorem Canadian duty furnished little protection to the Canadian mills, especially with the high price for Canadian and American seed, caused by the Rockefeller corner. The British product is practically barred out of the United States by their duty of 20 cents a gallon, equal to 24 cents an Imperial gallon. This is the case to be put before the Tariff Commission by the linseed oil millers.

A NEW PAINT.

BRITISH trade journals describe a new white paint, patented in Germany, which is claimed to far excel white lead and other similar products in fineness and smoothness of surface, covering power, permanence, and cheapness. It is said to be obtained by saturating burnt lime containing magnesia with a hydrocarbon, and firing until all the carbon is burned. The material is then ground fine and colored ready for treatment with linseed or other saponifiable oils; with mineral oil, partial saponification takes place, resulting in a good worklike paint. A dolomite limestone, containing from 20 to 50 per cent of magnesia, is said to be best for the purpose, although a limestone having less than 20 per cent. may be enriched by adding the desired quantity of magnesia, but with not such good results as are produced by the dolomite. Other pigments can be mixed with the material to produce paints of any required shades.

The advantages claimed for the paint are that it dries quickly without driers, is unaffected by light, and not changed by ammonia, sulphurated hydrogen, or sulphurous acid; that the coating hardens like enamel after some months, possesses a dull gloss, does not blister in the sun, and is washable, yet retains its original smoothness. The paint is suitable for walls and woodwork of all descriptions.

WOOD PRESERVER AND PAINT SAVER.

This compound is a waterproofer and one of the finest preservatives of wood ever devised. It also supersedes paint, and is better than tar, on all such structures as fences, posts, hurdles, poultry houses, cow sheds, portable buildings, etc. It can be laid on as quickly as tar or whitewash, and is as suitable for old as for new wood. Is good, also, for the metal parts of agricultural machinery; 112 lbs. anthracene oil, 14 lbs. black resin, 5½ lbs. strong liquid carbolic acid. Boil the oil and resin till dissolved, then whilst hot, pour the carbolic in, cover over till cool, and strain through a metal meshed sieve. Coloring matter could be added if desired.

PAINT ITEMS.

A large gushing oil well has been struck on the Douglass farm near Leamington, this being the fourth big gusher that has been completed in the last two weeks.

The Pendray Paint Works at Victoria, B.C., are to be rebuilt. The new plant is to be in full operation by the first of the year.

Paint and Oil Markets

QUEBEC.

Office of Hardware and Metal,
232 McGill Street,
Montreal, October 13, 1905.

NO remarkable features have cropped up during the week with the exception of turpentine which has shown a wonderful activity. It has advanced 4c. per gallon over last week's prices and is very firm at 97c. and 96c., according to quantity. A further advance is promised very shortly. Even at the present figures turpentine is much cheaper here than in the western markets and circumstances generally would justify the rise which is momentarily expected.

Gum shellac is not very well defined, manufacturers frequently quoting higher or lower than the current market price. On the whole, however, the disposition has been to sell higher rather than lower so that our figures may be considered fairly steady.

Linseed oil has been fluctuating in the foreign markets, but dealers here have recovered from their scare with the result that there has been no further drop and our figures as given last week remain steady.

The general trade is good, Fall business being well up to expectations.

Turpentine—The market is very strong and prices are now the highest since last May. This is accounted for by labor difficulties in the southern pine belt and the decreased shipments coming north. Every week shows a falling off in arrivals which is gradually becoming more pronounced. The difference between Toronto and Montreal prices is accounted for by the fact that there are better stocks in the east. We are now quoting: Single barrel 97c. per gal. Two barrels or over 92c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Local dealers seem to have recovered their confidence and a check has been put to the decline in value. We are now quoting as follows: Raw, one to four barrels, 45c.; 5 to 9 barrels, 44c.; boiled, 1 to 4 barrels, 48c.; 5 to 9 barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—We quote: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—Prices have not yet been withdrawn in this line, but the general opinion seems to be that such a contingency cannot be long delayed. Our prices are as follows: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc—(Ground in oil) — We give the following prices: 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—We give the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—The firmness previously reported is still apparent. We are still quoting: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—Producers are not steady in their quotations, but jobbers are still holding the following prices firm: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—The advance quoted last week has been maintained. We give prices: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Prices are generally from $1.20 to $1.40 per gallon.

Castor Oil—The demand is very brisk which has kept prices firm at 8 1-2c. to 9 1-2c., according to lot.

Refined Petroleum—As predicted by Hardware and Metal prices have undergone a change during the past week and are held firm at one cent advance all round.

ONTARIO.

Office of Hardware and Metal,
10 Front street east,
Toronto, October 13, 1905.

PRICES this week are practically the same as quoted in our last report, there being no feature of exceptional importance to note at present. General business in all paint materials continues very brisk, building still being quite active. Some large sales of lead are being made but there is no movement of any size in this direction, although prices are stiffening and are bound to increase shortly.

Turpentine has made another advance of 2c. on the southern markets and is very stiff here at last week's figures of $1.00 for single barrels and $1.10 in five gallon lots. A further advance is considered likely owing to the increase in the south and the shortness of stocks on the local market.

Linseed oil has advanced one cent, price being considerably higher in England. The quotations are being held to very strongly.

ALUMINUM!

How to use the C.P. Co's. Aluminum

The directions are simple. Have a clean brush, clean surface, stir the Aluminum and go to work. For further particulars see the label upon each tin and be sure the package bears the name of

The Canada Paint Company, Limited

LIQUID ALUMINUM

SPECIALLY PREPARED
READY TO APPLY

Our Liquid Aluminum will give a silvery surface to Mail Boxes, Radiators, Steam Coils, Stovepipes, Gas Fixtures, Range Boilers, Metal Ornaments, Church Steeples and is useful for interior and exterior decoration.

THE CANADA PAINT COMPANY'S LIQUID ALUMINUM is not affected by heat, cold or moisture. It is a thoroughly reliable article in every respect.

Window glass holds quite firm at the advance reported a week ago.

Petroleum still remains at the old figures, but an increase is looked for at any moment, business being very brisk.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c.; boiled, 50c.; 5 to 9 barrels, raw, 46c.; boiled, 49c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Much business is being done at the old figures, shipments by boat being very large. We quote: Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c; 18 1-2c. ex warehouse.

Crude Petroleum—Prices are very firm and further advances are likely. We quote: Pennsylvania, $1.36; Ohio, 92c.; Canadian, $1.32.

Glass—Last week's advance holds firm on account of the low stocks held on the local market. For prices see current market quotations.

The entire stock of tinned goods and enamelware should be examined for the discovery and renovation of damaged articles.

WINDOW GLASS—MONTREAL.

No shipments have arrived this week, though it is hoped that some of the vessels just coming in will have at least a small quantity of glass on board. Although prices are reported to have been once more advanced in the west, local importers have not raised their figures during the past week. It is probable that the western merchants are now amending their prices to correspond with changes made in the old country some time ago, and which were not followed by the local dealers. Belgian and English dealers state that they are determined to ship all the orders they have sold but they refuse to accept orders for shipment next spring at prices now current. We quote: First break 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break. 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

NEW USE FOR TREACLE SEDIMENT

If the residue which settles to the bottom of raw treacle is distilled, it gives, among other products, an oily distillate, which is a very complicated mixture and for which no use has hitherto been known. Two uses have now been discovered. One depends upon its affinity for volatile compounds of sulphur, which is very great and enables it to do good service in purifying either illuminating or heating gases from bisulphide of carbon and sulphuretted hydrogen. It is also an excellent solvent for naphthalene, and can be used either to dissolve that solid for industrial purposes or to obtain from it gases which contain it.

WOOD EXTRACT VARNISHES.

Hitherto, says Flandrak, the extracts obtained from quebracho, chestnut, oak, mimosa, and other barks and woods with a tannin basis have not been suitable for the manufacture of varnish, owing to the susceptibility of the product to alteration under the influence of water. This defect he has obviated by employing alcohol as the solvent, the extracts thus obtained serving as a wood varnish, drying glossy, and filling and contracting the pores of the wood in such a manner as to harden the surface. A thin coating of lacquer varnish is then sufficient to preserve the glass. — Rev. Prod. Chim.

Now is the time to push those paints. The season is drawing to a close. As long as the weather is good there should be a steady paint trade but you cannot tell what minute the conditions will be unfavorable.

ENTERPRISING WOODSTOCK STORE.

GARDNER & CO., Woodstock, are known to the trade as one of the most enterprising and progressive hardware firms in Western Ontario, and we are fortunate this week in being able to present illustrations of both the exterior and the interior of their new store, through the courtesy of Mr. Albert Karges, whose name is familiar to many of our readers on account of an article which appeared in Hardware and Metal over his signature some months ago. The store was rebuilt this Summer, after having been destroyed by fire last Spring. The illustration only shows the doorway and windows, above these being an arrangement of glass which provides for the throwing of light to the back of the store. A very plain and attractive sign is also attached to the top of the first storey.

The store is 100 feet long, with three floors and basement. The top flat is used as a tin shop, the second as a storeroom for glass and over stock of builders' hardware, stoves, graniteware and tinware.

The windows are only fair samples of the dressing done by Mr. Karges, but the arrangement of both is very commendable. The construction of the log-cabin of binder twine is very ingenious, roofing paper naturally being used for the roof of the structure, while screens make very good doors and windows. Garden and farm tools and ware goods fit in very nicely, making the whole window one which will attract the attention of the farm visitor in town. The display of the semi-circle of saws above the rows of chisels, and the arrangement of planes, drills, squares, hammers and other tools on the floor of the window is also especially attractive, not only to city artisans, but to farmers who do their own repairing.

The illustration of the interior does not do justice to the store, as it cuts off two large plate glass wall cases, 10 feet long and 8 feet high, and about 25 feet of the best part of the store shelving on both sides. On the left hand side of the main floor there are two ten-foot silent salesmen, 50 feet of ash counters, and a steel tool rack, which will hold 250 articles in good order. The shelving is 90 feet long and 11 feet high, 75 feet of it being fitted with hardwood shelf boxes, finished with hard oil, and numbering over 1,400. The sizes are suitable for shelf hardware. At the rear of this shelving a display of paint is made and a number of Bowser's self-measuring oil tanks for paint and machine oil are installed. On the left wall there is 60 feet of shelving for graniteware and tinware, behind this being the office, elevator and vault. The interior display can be seen fairly well, in the showcases cutlery, flatware, revolvers and small goods being displayed to advantage, while neat shelves on the counter are used to bring sad irons and food choppers to the attention of customers. The illustration hardly does justice to the display of gas stoves and ranges, they being given a crowded appearance by the nearness of the camera. The display of lawnmowers and ice cream freezers on the floor, and hammocks hanging from the ceiling indicates that Summer goods were kept well to the front when they were seasonable. The attractive office, the seats for the customers, the metal ceilings, and the general cleanly appearance of the store speaks much for the proprietors and for the store assistants.

Interior of Gardner & Company's Store, Woodstock, Ont.

TWO ATTRACTIVE WINDOWS.

The F. Hamilton Co., King street E., Hamilton, are showing an attractive sporting goods window, the central feature of which is a revolving stand on which are shown pads, sweaters, and other boot ball supplies. A neat assortment of revolvers and safety razors is also shown, while fishing rods and tackle, shot guns, ammunition and shells, re-loading tools and hunting jackets, are also shown to advantage in the window.

Another attractive window shown in Hamilton is that of Ramsay's hardware store, on the market square, a seasonable exhibit of edge tools, shears, hunting knives and pocket cutlery being displayed. Revolvers, cartridges and shells, rifles and shot guns, are shown in an attractive manner, while a neat display of fishing lines and tackle and Pflueger's luminous bait rounds off the window in a way that should attract the attention of passers by.

Article XVIII.

HINTS ON HOT WATER PIPING.

IT very often happens that portions of a heating system do not work in a satisfactory manner, even though the boiler and radiators have been correctly figured and mains, for the most part, are properly run.

In such instances it will be found that some radiators will be scarcely warm, while the balance of the system will, perhaps, be very hot, and while the difficulty may be the result of other conditions, it can usually be traced to an improper distribution of the water, that is, that radiators favorably placed will receive some of the water that should go to other radiators more unfavorably situated.

Now, as to the conditions that constitute an unfavorable situation for a radiator, it is perhaps wise to say a few words, which will be the more easily understood if considered in conjunction with the illustration shown in Fig. 1, in which is indicated a hot water flow pipe supplying water to two radiators, one about twice as large as the other, though placed close together, presumably in separate rooms.

It will be obvious that when water, like any other body, has attained a certain velocity or momentum, that the natural tendency will be to go straight ahead, until it is turned by an elbow or other similar obstruction, and that that tendency is stronger that is the other tendency to rise at the first outlet, providing that the outlet is to a radiator on the same level as the one connected straight ahead.

If, however, the small radiator were at a higher level and connected in the manner shown, the two "tendencys" would about balance in power, and a different arrangement would be required, as will be shown in a future article.

In this case, however, we have a radiator with, say, 50 square feet, and a larger one with 80 square feet of heating surface, supplied with a 1½ in. pipe, (the boiler being at fairly close range), the former having a 1 in. connection taken off the top and the latter a 1¼ in. connection taken off the end of the T, and this would work well.

Suppose, however, that the position of the radiators were reversed, then two propositions may be considered; first, to cut the 1½ in. pipe a little shorter, so that the "T" can be placed far enough back to allow the large radiator to still be connected off the end, and the small one off the top, in which case the connection to the small radiator would be increased to 1¼ in., because of the increased distance the water would be required to travel, and hence the increased friction between it and the sides of the pipe, and friction is one of the greatest factors with which the fitter has to deal in designing a hot water system.

The alternative connection would be to run the pipes as shown in the illustration, making a 1 in. connection serve the small radiator as at present, even though it is placed further away, and instead of a 1¼ in. branch for the large radiator, take a 1½ in. branch, and reduce to 1¼ in. just before rising through the floor. With such a connection the small radiator would have the advantage of the tendency of the water to run straight ahead, but this advantage would be offset by the increase in friction due to the greater length of 1 in. main which serves it, and the large radiator, while losing the advantage of being connected from the end of the main, has the distinct advantage of a connection into the top of the main larger than is necessary to supply it under normal, or favorable, conditions.

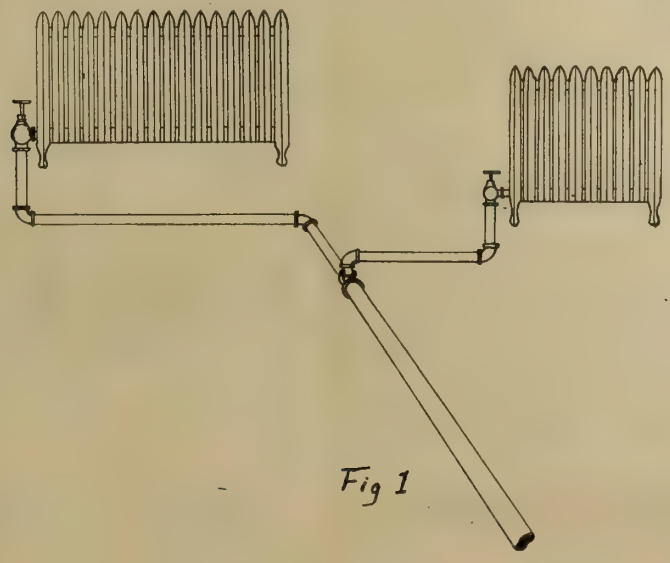

Fig 1

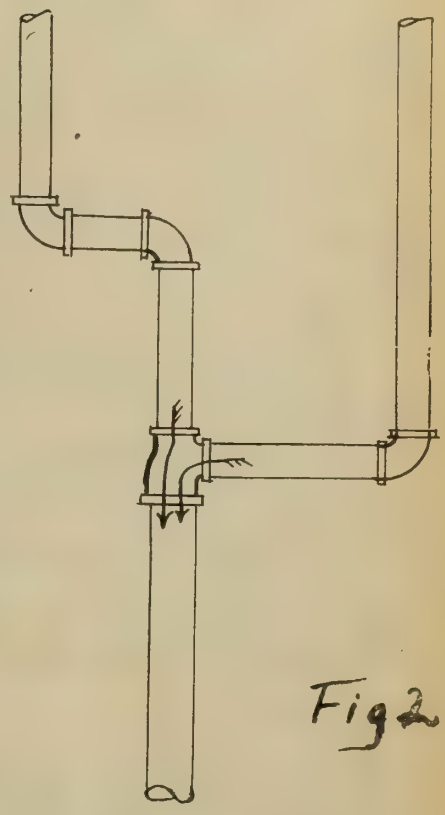

Fig 2

The great point sought to be made clear by the writer, who will deal with various phases of the question from time to time, is that the fitter must consider carefully not only the size of boiler and the size and location of every radiator, but if he wishes to have a plant that will work perfectly, he must pay attention to the formation of every connection, and see to it that, where circumstances demand it, a radiator is either favored, or the reverse, and in this way, and in this way only, can he expect to have each heater do its fair share of work.

Another fruitful cause of difficulty is the method of connecting together the returns from two radiators.

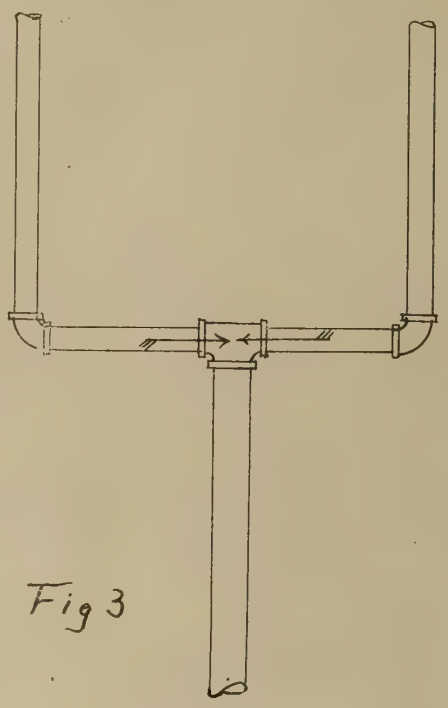
Fig. 2, which represents either a horizontal main, or riser, to an upper floor, connecting two radiators, shows the pro-

per method of connecting return pipes, the object being to prevent currents, coming from different directions, from conflicting, or, in the language of the steamfitter, "bucking," because, as is well known, the slightest obstruction will stop the circulation in one or both radiators; in this case the return from both radiators gently unite at the "T," as indicated by the arrows, and flow together to the boiler.

Fig. 3, however, illustrates a connection which will not work, the return water from two radiators coming squarely together practically stand still, unless one radiator is considerably larger that the other, when it may work to the disadvantage of the smaller one, or, if the two radiators be equal in size, one may work sometimes, and the other at other times, but neither can ever work freely when it is attempted to operate both, so that under no circumstances should a connection of this kind be placed on a return pipe.

While such a connection will work very well on a flow pipe, connecting two radiators, because the currents divide instead of unite at the "T," it is advisable, if only for the sake of appearance, to run both flow and return pipes alike and as indicated in Fig. 2.

CENTRAL HEATING.



IF a general inclination towards an improvement is an indication of its near approach, central heating is not far away, that is, for ordinary application, says the Architect and Builder. In special cases of grouped buildings and for parts of towns there are already numerous plants in the United States extending from a mile or so of pipe to over fifteen miles and the supply of some 500 houses.

The advantages of central heating in the way of doing away with discomforts are obvious. There will be no coal to be brought in, no ashes to be taken out, no dangerous boiler, no man to mishandle it, no dirt, no noise, no filling up the cellar with stuff that makes the parts that are free unfit for their uses. But the advantages are not only negative. Connection with a well ordered system implies heat in the doubtful days of early Winter and early Spring, without consideration of the policy of "starting the furnace" or "letting the furnace out." It means full heat at any hour of the day or night. It means also, if steam is the means of heating, that water for baths and household purposes may be heated from the central station. And a due humidity of air by the emission of steam could be (perhaps has been) regulated by an automatic contrivance.

As to cost—there is in the first place a saving for the consumer in boiler installation, attendance, costly coal, and perhaps fire insurance, all of which is to be reckoned as an offset to the cost of heating from a centre. And, on the side of cost, there is but one item—a great item—the street mains, which is not an actual economy for the community in the way of reduced waste of natural resources; and this economy must find its bearing upon the consumer in the end. With operations on a large scale, the cheapest kind of fuel is used, and the cost of handling it is likely to be kept down by placing the station with regard to easy supply. There is a saving in the cost of attendance, for, when the boilers needed for a district are combined in one plant, few hands comparatively are needed to operate them. And the skilful operation of coupled boilers can make savings which cannot be got out of single boilers, which have to be adapted to the coldest weather and half the time are not working economically. There must also be a saving to the community in the reduction which central heating stations would make in the aggregate cost of boiler insurance.

The great economy, however, which is to be effected by the introduction of central heating is the utilization of exhaust steam. The use of steam for the production of power means the generation of nearly ten times as many heat units as can be converted to mechanical energy. That is to say, nearly 90 per cent. of the steam generated is discharged from the exhaust pipe. Railway and lighting companies throw away in this manner heat which, if it were applied, would soon pay for the first cost of laying street mains by means of which to use it and make it profitable.

It follows that the economical application of central heating is in combination with the production of light and power. Whatever may be the doubt about the safety as an investment of a central heating plant which stands alone, there seems to be no doubt whatever that as a by-product, utilizing steam heat that would otherwise be wasted, it is a safe "proposition."

The more comprehensive the combination the better. Power and heat or lighting and heat are each better than power alone or lighting alone; but the combination of power and lighting and heat in one station is better still. All concentration for one thing reduces personal attendance, and it increases the opportunity of using economizers and superheaters which are more applicable to large and steady running plants than to small plants which run unevenly. But there is another and a large field of economy opened up by the manner in which the separate functions of a combination play into each other's hands. There will often, for instance, be a coincidence in the periods of high requirements of power or lighting (and therefore of much generation of steam) and the periods when heat is especially wanted. Thus the season of maximum light requirement is also the season for heat supply; and the heavy morning demands for heat correspond with the "peak-load" periods of an electric railway.

The question as to the form of heating seemed to be rather in favor of steam before the issue recently by Mr. Bernard Green, superintendent of the Library of Congress, assisted by Prof. S. Homer Woodbridge, of a report upon a central station for power and heating for the thirteen existing and projected Government buildings on the Mall and in the vicinity of the White House. This report charges heavily in favor of hot water.

The choice of system depends rather upon the preponderance of advantage than the absence of disadvantage in either system. Both have objections which must be met, and the American District Steam Company, of Lockport, N.Y., who have put in a large number of plants, claim (in a pamphlet printed four years ago) to have met some of the principal objections to steam which are stated in the report of Messrs. Green and Woodbridge. These objections are in the way of difficult maintenanee due to expansion strains, corrosion, condensation, etc. These it is possible for ingenuity to meet. The objection to hot water is the water itself, and it is difficult to get over the pressure of water raised to a height, the force of its expansion when freezing, and its determination to leak if it can and to find its way downstairs without making any noise about it. These objections are of less importance in public buildings which are in the charge of skilled attendants night and day. And for residences heated by an individual plant these are objections of less importance than the difficulty of managing steam without a skilled attendant, and the danger of mismanagement. But when the boiler is not in the householder's hands the balance of advantage to him seems to be in favor of steam.

Apart, however, from the care of having a destructive agent like water continually racing through the house within confining walls from which a pin-hole would constitute a means of escape, the case for hot water, in the report of Messrs. Green and Woodbridge, is very strong.

They propose to drive water through the pipes with centrifugal pumps at such a speed that the water, which will be sent out at a temperature of 150 degrees will only lose 30 degrees in the course of its circuit. With a temperature thus varying little and a pressure nearly constant, there will be little strain in the pipes, and if the system is reasonably tight and the same body of water is continuously used, there should be no corrosion. The system should last and the heating promises to be equal.

W. Mashinter, Toronto, has a large job on hand in installing a central heating plant to supply the new Stair office building at Bay and Adelaide streets, and the Star Theatre, with heat. The Webster system is being installed. A dynamo will also be used to supply power and light for the two buildings.

GALVANIZING METALS.

GERMAN papers report that Cowper Coles, an Englishman, has invented a new process of galvanization, and has recently demonstrated the same with samples of iron, copper, aluminum, and other metals. The objects to be galvanized are simply heated to 260 degrees in a bath of zinc vapor, the duration of which depends upon the desired thickness of the coating but which is always short. After heating the objects are thoroughly coated with a layer of zinc, which on the surface has formed an alloy with the other metal by penetrating into it a considerable depth.

A copper rod can in this way be almost entirely transformed into brass, while the temperature employed remains far below the melting point of both metals. A great advantage of the coating, which is so perfect that such zinc-galvanized screws and bolts afterwards fit perfectly into the nuts, while with other methods they have to be polished. It is also very convenient that the objects to be galvanized have not first to be cleaned.

The retorts in which the heating takes place are of iron and are heated from the outside. Another peculiar advantage is that the zinc does not adhere to the walls of the retort, but that these, after months of use, are entirely clean. The explanation for this is that the walls of the retort are heated most, so that no zinc vapor condenses on them. Experiments to use the process with metals other than zinc have been so far made with copper and antimony, and have been partly successful, but not to a degree to make them of practical use.

PLUMBERS' BANQUET.

Toronto plumbers have decided to hold their annual banquet on Thanksgiving night, Thursday, Oct. 26th. The event will be held in the assembly hall of the Temple building. In previous years this event has occurred at some other time than when the convention was held, but this year the Toronto association will be out in force, and they are inviting every delegate to the Thanksgiving Day convention, to partake of their hospitality. Not only delegates and members of the association are invited, but every master plumber in Ontario, whether he be a member of the association or not, will be given a hearty welcome to the banquet. Representatives of the supply houses will, of course, also be present.

PLUMBERS' CONVENTIONS.

Plumbing supply men are to gather in Toronto on Tuesday, Oct. 24, the occasion being the first annual convention of the Central Supply Association. Every member is expected to be in attendance, as new price lists caused by the heavy advances in metals, are to be considered, the likelihood being that advances will be made on many lines.

Two days later the Master Plumbers' Association for the Province convenes, and as the location is most central and low railroad rates are in force, the gathering is expected to be one of the largest in the history of the organization. The events of the past three or four months provide ample business of importance for the delegates to deal with, and as the association has successfully passed through a most critical period there should be an old-time Thanksgiving celebration by the members in attendance. "Reciprocity" is to be the watchword. Let every member be present.

AN INGENIOUS DEVICE.

An ingenious and useful device for lighting incandescent gas mantle lights, and even ordinary gas burners, is on show at the Citizens' Gas Control Co., Montreal.

The device is called the Pneumatic Self Lighter, and consists of a valve placed underneath the burner and a push button, the two being connected by a small tubular wire.

The mechanism is so constructed that the distance between push button and valve may be anything. All that is required is to push the button as one does with an electric switch, and the gas is lit instantly without the aid of matches or tapers, thus removing the possibility of fires. The company which is inviting inspection to the device is introducing it for the first time in Canada. It should meet with a large sale.

VENTILATION AND HEATING.

EXPERIENCE has clearly demonstrated that in this climate no system of ventilation can be successfully operated by itself and independently of the method of heating that may be adopted. It is, in fact, a vital element of success that the two systems be most intimately combined, for they are clearly interdependent, and when properly applied are so interwoven in their operation and results that disunion is certain to bring about failure. For the purpose of ventilation, the fan was first applied upon a practical scale about the middle of this century, but only to a limited extent, and it was not until the fan and the steam heater in marketable form were introduced by B. F. Sturtevant that the so-called "blower system" became a reality. The system, of which these two elements are the most important factors, as originally installed by this house, has naturally been known as "The Sturtevant System." This system is at once practical, successful and economical; for, air being the natural conveyor of heat, it, may, when properly warmed and supplied, perform the double office of heating and ventilating. As applied, the Sturtevant system forces the air into the apartment by the pressure or plenum method. When a fan is arranged to exhaust or withdraw the air from an enclosed space, the term vacuum, or exhaust method, is almost universally applied.

PLUMBING GOSSIP.

Messrs. Riley & Bryan have opened a plumbing shop at 185½ Queen street west, Toronto.

* * *

It is understood that Messrs. Barr & Anderson have been awarded the contract for all the plumbing in connection with the new post office building now under construction at Vancouver. The figure involves a large amount, in the vicinity of $10,000.

* * *

Berlin is now negotiating with the natural gas companies to extend their mains to the German town. The proposal is to sell the natural gas at 35c. per thousand feet, and give the town 30 per cent. of the revenue.

* * *

R. J. Cluff, Toronto, Ontario sales agent for Warden King & Son, Montreal, paid a hurried visit to the Quebec metropolis on Monday, also visiting Buffalo on Wednesday.

* * *

J. C. King, of Warden King & Son, Montreal, visited Toronto and Buffalo this week.

* * *

H. Labatt, of the Canada Brass & Supply Co., London, spent a few days in Toronto during the past week.

* * *

Owing to the recent death of C. E. Stephens, the late firm of Stephens & Hawkins, electrical engineers and contractors, have been succeeded by Messrs. Hawkins & Hayward, who will continue the business at Victoria, B.C.

* * *

Bob. Harrison, Toronto, the popular vice-president for Ontario of the National Association of Master Plumbers, has been keeping it dark from his friends, but it's getting fairly well known now, and he won't be able to smother the surprise until he meets his out-of-town friends on Thanksgiving Day. Telephone Main 4401, or drop "Bob." a card, asking him how the baby girl is getting on.

* * *

Elliott Brothers, Kingston, are installing a heating system in the opera house in that city.

* * *

Harrison & Robertson, Toronto, have a large job on hand in installing a steam heating system in the new opera house in Peterboro. The out-of-town business of this enterprising firm is growing at a tremendous rate, thus speaking volumes for the quality of work performed by them.

* * *

The Borden Co. are now ready to furnish their "Made in Canada" solid adjustable die machines and hand stocks, and Mr. M. E. Murray, their genial Canadian representative, has commenced a canvass of the trade interested in pipe fitting tools. Mr. Murray expects to visit Montreal next week.

* * *

Geo. C. Ellicott, plumber, of Hamilton, was a visitor in Toronto this week.

* * *

Robt. Patterson, Toronto Junction, has a large job on hand in installing the plumbing and a steam heating plant in the Consumptive Hospital at Weston. The work will amount to several thousand dollars.

* * *

Sovereign radiators are becoming popular in Toronto, and are now being specified on the contracts for heating many of the best residences in the course of erection throughout the city. Two down town buildings where the Sovereign line has been installed are the new Peterkin building on Bay street, and the new branch of the Bank of Hamilton.

Hence the Large Demand for

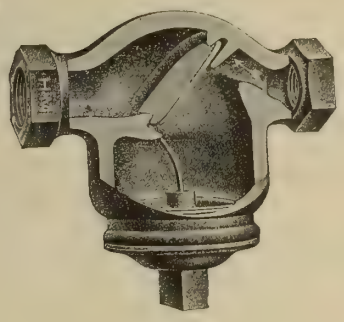
THE NATURO CLOSET

They are seeing and reading with interest the truths we are telling them throughout the country in the numerous periodicals about our closet.

The result is natural, they want it. We receive inquiries and invariably refer same to our customers, letting them handle the business.

To secure the same benefit, you need only to instal a sample line of NATURO Closets.

Do you want trade thrown your way ?



The NATURO Company

C. H. Muckenhirn, President.

Salem, N.J.

MUELLER WATER STRAINER

PATENTED

C—109

For fire purposes water is often pumped direct from the source of supply instead of after it is filtered, and in such instances enough sand and dirt are carried to the faucets to do them serious injury.

The Mueller Water Strainer screens out all sand and dirt from unfiltered water. It prevents injurious substances from coming in contact with the faucets.

The Mueller Water Strainer is made of cast iron, has a brass gauze screen and brass plug and is made for all sizes of pipe up to 3 inch.

Each strainer bears the Mueller trade mark and is *unconditionally guaranteed.*

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 13, 1905.

NO material change has taken place in the Quebec plumbing markets this week, but everything has stiffened in value. It is questionable whether so much firmness has been manifest at any other time this year.

Heating contracts are, of course, the biggest end of the business at this time of year, the activity being spread over the whole Province. Plumbers from outside points are reported in big numbers at the local supply houses, and nearly all of them are ordering supplies for large heating jobs. The long continued fine weather, however, is said to be holding back several good orders for heating residences and indications are that the next six weeks will be quite as active in this line as the present.

There are prospects of a quite serious scarcity in iron pipe, with the result that much strength has been added to that part of the market. Even apart from the reported scarcity, the general activity and high prices current in the iron and steel markets both in America and Europe would tend to higher figures in any case.

Range Boilers—Business is being maintained at its high level, and with no change in prices, which are quoted as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Another advance in pig lead, during the week just passed brought it to its record price for the year. Pipe, however, remains unchanged. We are quoting: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

Iron Pipe Fttings—A buoyant tone is evident. There is every sign of an early advance, but for the present we quote as follows: Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—This has been the feature of the market during the past week, some firms reporting a scarcity in their supply which will be hard to replace, except at higher figures. The big iron and steel manufacturers are not allowing any deviation from specifications on contracts now being booked, showing the imminence of a withdrawal of prices. We now quote as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—Big orders are on hand and shipments are now being made with great regularity. Our prices are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—Everything is in favor of a continued firmness in this line. Tin is as firm as ever, and lead has experienced another rise, but we are still quoting: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 13, 1905.

A HEAVY business is being booked by the local supply houses for heating goods and for lead pipe. A very large share of the orders come from the west, one house reporting orders for two carloads of lead pipe during the past week, both shipments to be made to Winnipeg. With this exception the demand for all lines of plumbing supplies is about equal, the volume of business being as great as was ever experienced in the history of the trade of this city.

Despite the general activity there is no particular shortage of goods reported. Some houses state that certian sizes of baths are hard to procure, while others say that traps are scarce. This condition is not general, however. Marble is also scarce in some quarters, while there is reported to be a heavy call for one-pieced sinks.

In heating goods the demand is exceptionally brisk, particularly in iron pipe and fittings and for boilers, heaters and radiators. The coming of cold weather will give this trade an additional impetus, the one difficulty being that the heating contractors are unable to secure a sufficient amount of labor to handle the large business in the short time it is desired.

No changes in prices have occurred but the general firmness in the metals markets indicates that advances must be made very shortly and it is likely that after the meeting of the Supply Association next week that higher figures will be quoted on several lines, more particularly on lead, iron, glass and copper materials.

Lead Pipe—Prices are very firm and an advance is looked for shortly. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Demand is active with producers keeping well up to their orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fttings—A strong demand exists for both iron pipe and fittings, but a scarcity of supplies exists. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

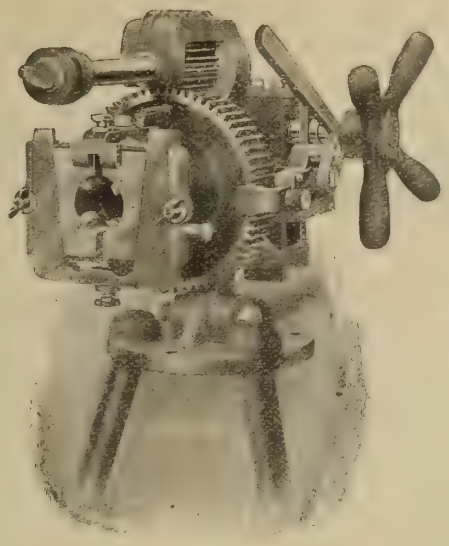
Copper and Range Boilers—Increasing business is reported owing to the completion of building contracts. The discount continues at 15 per cent.

Galvanized Iron Range Boilers—Trade is quite brisk and prices are strong. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—Prices of pig iron being very strong ,and the call for goods being heavy, an advance is looked for, possibly next week. We quote as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 1-2 inch, $15.75; 3 in. $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Firmness in the lead and tin markets keeps solder quotations very strong. Business being done is heavy. We quote: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware—The heavy demand for some lines has caused a scarcity, but on the whole, the manufacturers of Canadian ware have kept well up to the demand. Prices continue unchanged. We quote as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50; spemial, $15.50; 3 inch rim, first quality, $19; special, $17; 5 1-2 feet,



RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

ELECTRIC REFRIGERATION.

APROPOS of the article on the use of electricity for refrigeration contained in the last issue of Commercial America, the following description of a small electric refrigerator, taken from the Scientific American, has interest:

Ever since the perfection of the cold storage plant, money and brains have been expended in producing an iceless refrigerator. It was generally conceded that there was a demand on the part of dairymen, soda fountain proprietors, saloon keepers, butchers, and grocerymen for something that would make them independent of the iceman, and this seems at last to have been accomplished. Besides being a great convenience, the new refrigerator has a number of other recommendations, notably its cleanliness. Because of the great amount of moisture in the interior of the refrigerator, and because of the material usually stored within, the walls tend to become foul unless cleaned with scrupulous care at frequent intervals. This condition is brought about all the more quickly where the ice is not pure. Moreover, the charging of the ice receptacle every day is a nuisance. All this is done away with by means of electric refrigeration.

The electric refrigerator is a self-contained and automatic cold storage plant in a small way. It almost takes care of itself. The switch controlling the electric current is the only part that must be manipulated.

A refrigerator of this kind has been in operation for some time as an experiment in a Philadelphia grocery store. When the store is opened in the morning, the current is turned on and remains so during the day. Although the box is being constantly opened and closed, the temperature is maintained at 34 degrees. About the best temperature obtainable by the ordinary method of icing is 40 to 42 degrees. When the store is closed for the night the current is shut off, and the temperature remains constant all night. The difference shown by the mercury between the closing and opening hours is never more than one degree. During all this time no operating expenses whatever have been incurred.

The largest soda fountain in Philadelphia has been in operation for several months, and the materials drawn therefrom have been uniformly several degrees colder than could be secured with the use of shaved ice, and yet no ice has been used in it. A motor of one-half horse-power in the cellar operates a refriegrating plant, which not only keeps the fountain at a frigid temperature, but also does some additional work of a similar character in the cellar.

The iceless refrigerator is much the same in appearance as any large refrigerator. In a compartment at one end a motor and all the necessary compressors and other paraphernalia are contained. The place usually occupied by the ice is given over to a tank containing brine, which is the means of cooling the interior of the refrigerator. The principle is identical with that of the large refrigerating establishments, but this is the first time that the system has been reduced to an automatic basis. No expert knowledge of either electricity or refrigeration is required in order to operate one of these outfits. The types now being manufactured are of the sizes which are likely to be required by storekeepers who would ordinarily make use of at least two hundred pounds of ice daily. The next step will be the manufacture of one which will be available for the larger householder, and will be operated by a motor of one-eighth horse-power.

Another notable feature of one of these equipments is that where it is desired to have ice for use on the table, these machines will make it while performing their ordinary functions. One of the refrigerators has facilities for making two ten-pound pieces of ice per day, and another with a little different arrangement will make a number of small cubes.

NATURAL GAS IN ONTARIO.

WESTERN Ontario is being favored with a supply of natural gas from the Niagara district, the cities of St. Catharines, Hamilton, Brantford and Galt being certain to secure cheap gas this fall, while other towns and cities will have to wait for their supply until next Spring. With the development of the field near Leamington a further supply should be available soon and London, St. Thomas, Chatham and the more western centres may be supplied at an early date.

The low price at which the natural gas is sold is bound to encourage its consumption amongst the great mass who have been unwilling to pay $1 or more for the poor quality of gas supplied in some of these cities, and live merchants are stocking up heavily with gas fixtures, mantles, globes, etc., as well as gas stoves, water heaters, grates, and other lines suitable for use in heating the house or cooking meals. Later on a large trade is looked for in gas furnaces and manufacturing plants are expected to use the gas as fuel extensively.

Two companies, the Ontario Pipe Line Company and the Ontario Gas and Fuel Company, are competing in the district and only 35 cents per thousand is being asked for the gas. Many streets have been piped and the work of making connections with the private residences is being pushed forward rapidly. Until this is done the sale of fixtures and supplies cannot be very extensive, but another month will see a general activity.

In Hamilton a Gas Supply Company has been formed, Ald. Hugh Wallace, plumbing contractor, being one of the stockholders. Only gas heating, cooking and lighting supplies are carried in stock and a sufficient trade is looked for in this line to make the enterprise a permanent one. The introduction of natural gas provides an opportunity for similar enterprises in other towns.

The piping of the natural gas throughout Western Ontario and its sale at such a reasonable rate also suggests the possibility of carrying the natural gas found in Alberta and Saskatchewan to Winnipeg and other large centres in the west, fuel being very expensive and being required in large quantities throughout the prairie districts. The increasing use of natural gas is of special interest to plumbers and hardware merchants, as well as to manufacturers of stoves and brass goods.

A popular bath in England is arranged for use in cottages and rooms where space is limited. The bath is enclosed in a cabinet which forms in itself an attractive piece of furniture, and the woodwork can be made to match any other in the same room, the cabinet being arranged to contain bath mat, bath towels, bath gown, sponges, soaps, and other bath requisites. It folds upward and is well balanced so that it can be easily enclosed in the cabinet and put out of sight. Another arrangement of a similar kind has the bath swing in under the sink in the kitchen.

One of the largest single orders for fire hose placed by a private corporation in the Dominion has just been announced. Some weeks ago the Canada Car Co., Montreal, invited tenders for providing their enormous plant with fire hose. The quantity required totalled 4,400 feet. A large number of tenders were received, and the result has just been given out. The successful tenderers are the Canadian Rubber Co., of Montreal, who will supply 4,400 feet of their new three-stripe "Star" Underwriters' 2½-inch cotton fire hose, with couplings attached.

TWO NOVELTIES OF MERIT.

F. Alfred Reichardt & Co., New York, are introducing two novelties to the hardware trade, both of which have considerable merit. The Farny razor sharpener, which is illustrated herewith, is a novel machine for sharpening razors and keeping them in order, so that shavers can always be ready for use without being sent to the barber for honing. The machines does its work in about thirty seconds, and there is no mechanical skill or experience needed by the operator. All that is required is the turning of a crank and the sharpener does the rest. The Farny handstone, made of carborundum, is a novelty which should sell well, carborundum being the hardest material in the world after the diamond. The handstone is moulded into shape that will fit the hands and feet, and glides over the surface of the skin, producing the effects of softness of silk velvet, while pumice or sand-stone roughens and scratches.

THE MAN OF THE FUTURE.

AT the final meeting of the Electric Club, of Pittsburg, before the Summer intermission, Mr. Frank H. Taylor, second vice-president of the Taylor, second vice-president of the Westinghouse Electric Co., and one of the strong men in the manufacturing world, gave an inspiring address to the young men of the club, which was published in the Electrical Journal. The advice is of a kind to stimulate and quicken every thoughtful young man.

Mr. Taylor says, in part: "We cannot all be great, but it is honor and joy enough for most men to be loyal and faithful captains, without whom the work of the great general must go for naught. There is no reason why any of us should fail in efficient service, provided we keep just a few true things in mind. My observation has extended over a time long enough to assure the man of twenty-five that by a diligent and intelligent pursuit of the work that lays at his hand, he will prosper. Look forward to your careers with joy and cheerfulness, with courage and confidence. Lead simple, normal, happy lives, ready tice work carefully and deliberately. I at any moment to grasp firmly the first clear opportunity for wider experience.

"Do not feel as if you were undergoing a mysterious kind of punishment during your apprenticeship. Live here as if it were your home. You will get the needed experience of life just where you are. Your intellectual development, like your physical development, does not depend on the amount and variety of food you take in. A sound digestion is the essential thing. Above all things, your experience needs to be digested properly.

"I recall that I went at my apprendid first one disjointed thing and then another, and finally I was rewarded for the thought I gave to the subject by finding that these separate things settled themselves in their proper places, and I caught the essential binding link so that all that went on around me became part of a complete scheme, the unity of which was revealed to me. I think if I were an apprentice in a great company's works I should hunt up some place where work had congested and I would ask for a chance at the job. I would master it in such a way that I would forthwith be intrusted with a continuance of duties that would tax my

TELEPHONE, MAIN 3389

resources and insure my growth. A mark is put upon such a man.

"Continued growth is the essence of success. Keep growing so long as you remain on this earth. A power to grow continually, even if it be gradually, is the first requisite for a successful life. To grow we must keep humble and not think we know it all. Next is the importance of keeping in the current of vital events. Swim always in the broad river in company with men bigger than yourself. Be generous enough to recognize the better man. Keep out of the pleasant eddies of life or you may circle back to the worn out methods of your grandfather. You will always need exact knowledge, but let it be broad. I would not undervalue the extreme specialist, but as a leader he is apt to be too one-sided. The class leader at college sometimes turns out to be a misfit in later life. I saw one once who seemed to be strong, but in action he was like one driving wheel on a locomotive that was a little larger in diameter than its fellows! On the other hand, you must not remain in the background, constantly playing safe. With your fresh minds and fresh ambitions you need a good share of daring to succeed. Come out in the open and make a few blunders, take your licking, and thereby gather lessons for the future.

"Don't be ambitious for wealth as such. Don't barter your life for it. It is beyond your control. Manage your future organization so that the owner of the individual will be better recognized. Provide for a business condition where all competent men can develop wholesome, robust lives, and can find happiness and contentment in their work. In order for the full development of your own powers, as well as those of others, be generous to those with whom you work. Never pull a man back in the race. Rejoice to see the best man win."

HANDSOME NEW PREMISES.

C. M. CUTTS & CO., Toronto Junction, Ontario, are erecting handsome quarters on the corner of Dundas street and Pacific avenue, just a stone's throw from their present premises. The new building will be 50x150, two stories high and is expected to be ready for occupation by the first of the year. A representative of Hardware and Metal was shown the plans of the building and in company with Mr. Cutts paid a visit to the building itself—that is, the first floor.

The plans call for something unique and the sign points to Cutts & Co. having one of the finest-constructed and most modernly-equipped hardware stores in the Province. The lower floor will have two entrances and three show windows. There will be no counters. Instead oak shelving will run the full length of the store, thus giving greater floor area. Stoves, furnaces, mantles, paints and oils, and general hardware will be on the lower floor. Besides there will be a glass room, workshop, office and vault. Mr. Cutts will also have a private office done up in antique style. The ceiling of the lower floor will be rather striking in appearance, as varnished Georgia pine is to be used, with no plaster whatever.

The second floor of the building will be composed principally of offices. The basement may be used partly as a storeroom and partly as a workshop.

HARDWARE MEN: Our

STEEL WATER TROUGH

is a seller—something the average farmer has been waiting for,

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

We will make you an interesting proposition; so write us at once that you are open to consider the agency in your district. We appoint one representative only in all medium size towns.

It's worth having, believe us, so write for it to-day. STEEL TROUGH & MACHINE Co. Limited

TWEED, Ontario

Dark days are coming. Buy the best **Light Producers.** We make twelve different styles of Lanterns. For sale by all prominent dealers.

ONTARIO LANTERN & LAMP CO.

CURRENT MARKET QUOTATIONS.

Oct. 13 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

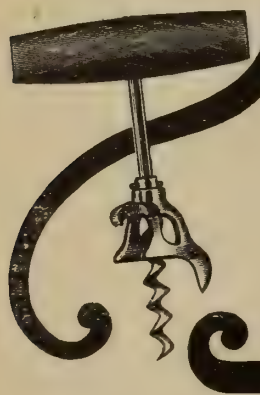
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.



THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

SALES LESSON II.

"You can prove!" When the enquirer asks you to prove that "Dillon" Strand Wires are resilient (Point No. 1), take a piece of the fencing, hold it vertically, and press down on it near the centre. Every strand and stay, too, will spring down and return to its original position, no matter how many times you repeat the test. Tell your enquirer that if the fence was on posts you could climb over it, sit or stand on it, and the result would be the same. Tell him that only High Carbon Hard Spring Wire, Well Galvanized (the "Dillon" make-up exactly), can successfully stand such strains, which are about equal to those the weather imposes. "The DILLON HINGE-STAY FENCE is made to last."

Drop Head Sewing Machines

With and Without Automatic Lift

THE ALEXANDRA THE VICTORIA

THE ALEXANDRA is a perfect High Arm Sewing Machine, made of the finest materials by skilled workmen and containing all the latest and best features in construction. It is a marvel of simplicity, the acme of durability, the *lightest running* machine made, and is unexcelled for perfection of work. **THE ALEXANDRA** has many features. The take-up or thread controller is *absolutely positive*, being actuated by a rotating cam, giving *perfect control* of the thread, so that each stitch is pulled with *exactly the same tension. No other shuttle machine made at the present time possesses this improvement.* The machine is *self-threading throughout*, except the eye of the needle. The needle is self-setting and *cannot* be set wrong. It is the *only machine* made with the driving pulley to the outside of the hand wheel. **THE ALEXANDRA AUTOMATIC LIFT** is the most desirable and the only perfect Automatic Drop Head Sewing Machine ever offered. It is the only one on the market having Positive Action, Double Locking. No Springs, No Vibration, Perfect Durability, Dust Proof Stationary Head Case, Ready Adjustment, No belting up of Balance Wheel.

RETURNED APR 11 1906

The Alexandra Hand Lift Drop.
Style No. 44. Open for Use.

THE VICTORIA is a *perfect* reciprocating shuttle, lock stitch, sewing machine, *light and easy running, well made, reliable, and honest*, and *cannot* be worn out by foot power use. It is guaranteed to be *superior* to any other machine of the same type—*i.e.*, the type of machine having the *thread-controlling mechanism* operated by the action of the needle-bar and spring take-up. **THE VICTORIA** will do the *widest range* of *family sewing*, from the *lightest* to the *heaviest*, and do it *perfectly*. It fully meets the demand for a reliable sewing machine.

These are Two excellent lines for Hardware Dealers. They yield a good margin of profit and are easily sold.

A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

E. G. GOODERHAM, Managing Director

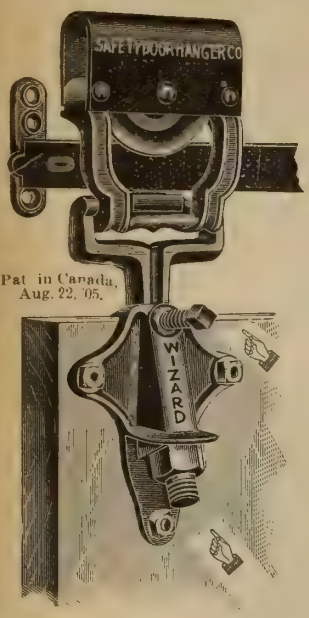
"Alberta National Hot Blast"

For all kinds of Coal

THE double heater in the Alberta is made of one piece of stamped steel securely rivetted to body. The flue around the fire-pot is gas-tight. An entirely new way of hanging the fire-pot does away with the usual legs. A patent has been applied for on all the above features, so that our customers will have exclusive control.

No smoke when firing up. The swing top is provided with a cover for the kettle. The hot blast draft enters through feed door and allows the hot air to be spread over the top of the fire, burning the gases.

We are fitting up the Alberta this year with duplex grates and annular shaking ring. These can be taken out in pieces without removing the fire-pot.



The fire-pots also have been made nearly straight, giving larger capacity and less trouble from holding up the clinkers and ash.

Made only by

THE MOFFAT STOVE CO., LIMITED

Winnipeg **WESTON, ONT.** Calgary

Pat. in Canada, Aug. 22, '05.

MR. DEALER,

You will find the Building Trade like the . . . .

WIZARD ADJUSTABLE HINGE HANGER

"Wizard" Hangers are easily put in place; time is often lost in getting a sliding-door to hang properlywhen an ordinary hanger is used; with the "Wizard" all difficulty is overcome in a moment, and the door placed in any position desired by simply turning the hexagon nut or set-screw.

The "Wizard" is the only Adjustable Hinge Hanger ever offered to the trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices throughout the Civilized World**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

BOOKS FOR BUSINESS MEN

Business Short Cuts

The largest, the best, the most practical book of experts' short cuts ever published.

Contains much valuable information on:

Labor Saving Methods, Advertising, Loose-Leaf Ledger Devices, Checking Systems, Mathematical Short Cuts, Correspondence Helps, Card Systems, etc.

$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

Price, $3.00 Post Paid

Thorne's Twentieth Century Book-keeping

and Business Practice

By W. W. Thorne

Mr. W. W. Thorne is the acknowledged leading authority on Book-keeping in the United States and Canada. The Ontario Government recently engaged Mr. Thorne to re-model the book-keeping system of the Province.

The Index

of this book contains over nine hundred references and is so arranged that any subject can be referred to instantly.

Some Subjects Treated

Accounts Receivable	Accounts Payable
Adjustments	Assets
Averaging Accounts	Bad Debts
Balance Sheet	Bond Accounts
Bank Accounting	Capital
Capital Stock	Card Ledgers
Cash Books	Cash Discounts
Checking Systems	Cost Accounts
Cross Entry	Distribution of Accounts
Depreciation	Double Entry
Expense	Installments
Interest	Journals
Ledgers	Merchandise Accounts

Etc., Etc.

If you are a book-keeper you cannot do without it.

If you are a business man it will be worth money to you.

Monthly Account System for Retail Trade

In answer to our inquiry from one of the largest departmental stores in Montreal, who are using this system, this is their answer, viz:

"Briefly, we find the Loose-Leaf System of handling accounts a very satisfactory one. We have seven Ledgers containing about 5,000 running accounts, and a large number of pettys."

Ellis Bros., grocers, of Ottawa, write as follows:

"We have been using your Monthly Account System in our grocery business for the past four years. It has given the utmost satisfaction and is away ahead of the old-time system. Its greatest feature is in always having accounts ready for rendering. We heartily recommend it to any concern wishing to be up-to-date

Canadian Wholesale Hardware Association

SEVENTH ANNUAL CONVENTION AT TORONTO, OCTOBER 17th.

ONE of the most important gatherings in the history of the Canadian Wholesale Hardware Association assembled in Toronto on Tuesday, Oct. 17th, there being a fair representation present at the meetings, which were held in the offices of the secretary on Toronto street. Organized in Hamilton seven years ago, the association has been a great factor in bettering the conditions under which the hardware jobbers do business, and has done much towards bringing about a better feeling among the representatives of the various wholesale houses throughout Canada.

At last year's gathering the project of forming a national association, to include the wholesale hardware houses of the Maritime Provinces, of British Columbia, as well as Ontario and Quebec, was discussed, and this question was one of the most important before the gathering this year, a strong delegation of the most representative hardware jobbers from the Maritime Provinces being present to discuss the details of the more comprehensive organization with the delegates present from Ontario and Quebec.

Retailers look to the wholesale association to handle questions of vital interest to the hardware trade in Canada, as in the absence of a strong retail hardware dealers' association the Wholesale Hardware Association is the only body which can speak with any authority on matters pertaining to the Canadian hardware trade. At the inception of the association a feeling existed amongst the retailers that the new organization would mean a combine detrimental to the interests of the local merchants, but this feeling no longer exists as it is generally recognized that the association of jobbers has to a great extent prevented the cutting of prices and has exercised a steady influence of benefit to the entire trade.

A few of those present at the opening session of the convention were : Thomas Birkett, M.P., of Thomas Birkett & Sons Co., Ottawa; A. Whitam, of Hobbs Hardware Co., London; William Vallance, of Wood, Vallance & Co., Hamilton; T. E. Newman, of Caverhill, Learmont & Co., Montreal; W. Starke, of Starke Hardware Co., Montreal; A. Jeannotte, of L. H. Hebert, Montreal; T. G. Dexter, of H. S. Howland, Sons & Company, Toronto; J. G. Lewis, of Lewis Brothers & Company., Montreal; T. B. Lee, of Rice Lewis & Son, Toronto; D. H. Howden, of D. H. Howden & Co., London; S. R. Kennedy, of the Kennedy Hardware Co., Toronto; and Secretary-Treasurer J. S. Hardy, Toronto, others being represented by proxy.

The first business before the gathering was the annual address by President C. A. Whitwam, of London, who spoke as follows :

President's Address.

Members of the Canadian Wholesale Hardware Association :

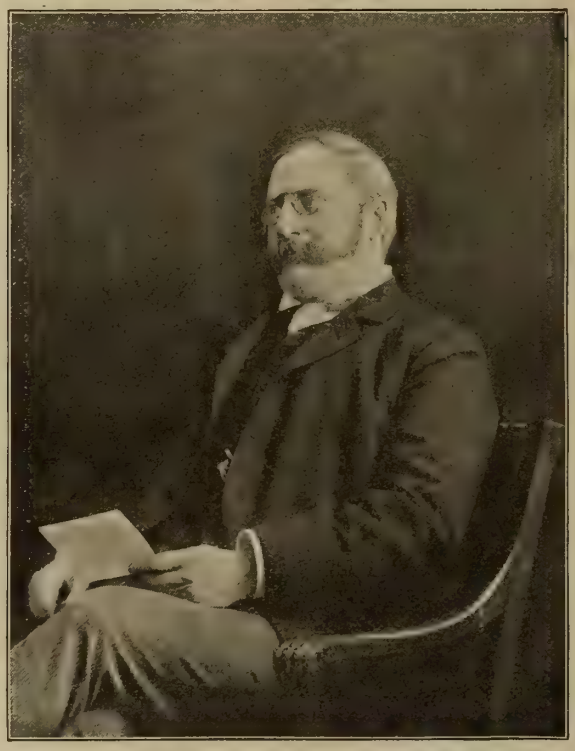
Gentlemen,—It is with the greatest pleasure I greet you at this, the seventh annual meeting of our association, and congratulate you on the general prosperity that has accompanied business, not only during the past year but for several successive years. The volume of business has taxed a great many of our industries to their fullest capacity, and with the tremendous influx of settlers and others to the great Canadian Northwest, the abundant harvest which has been given to all Canada, the building of the new transcontinental railway, and the consequent consumption of all kinds of goods, I think we can look forward to the same condition of business for some time to come

Canada is now being considered by large American manufacturers very much more closely than ever in the past, and they are coming this way. The Plymouth Cordage Co., of Boston, are erecting an enormous plant at Welland, the P. & F. Corbin, the Stanley Works, the Hart Steel Register Works, the Russell & Erwin Co., the Lehigh Cement Co., and others, are now negotiating for lands for their proposed Canadian plants. Not only in Canada do these conditions exist, but in the United States. The iron trade, especially, is booming, and shows very clearly higher values of material must come, indeed are with us now, advances in the prices of wire and other steel goods having already taken place.

Mr. William Vallance, of Wood, Vallance & Co., Hamilton, Elected President.

I am sure it is very gratifying to us all to know that the pleasant relations which have existed in the past between the several manufacturers and our association are still maintained.

During the past year we have not suffered loss by death of any of our members, and we should be thankful to God for His care over us.



We have applications from other job-

bers wishing to join our association, which will be laid before you for your consideration.

Last November your committee, in response to an invitation, visited the National Wholesale Hardware Association of the United States, meeting at Atlantic City, and we are very much indebted to that body for the cordial reception given your delegates during their visit there. We have invited them to send representatives to our meeting, and trust we may have the pleasure of welcoming them.

In closing, I desire to heartily thank the members, also the executive committee, and especially our able secretaries, for their loyal support and the lenient manner in which you have overlooked my shortcomings, and to repeat my appreciation of the honor you have conferred on me by electing me your president for the year now closing.

C. A. WHITWAM, President.

Mr. T. H. Newman, of Caverhill, Learmont & Co., Montreal, Elected Vice-President.

General Business.

Letters of regret at non-attendance were read from T. James Fernley, secretary-treasurer; Samuel A. Bigelow, president, and Brace Hayden, second vice-president, of the National Hardware Association of the United States, all of whom sent their best wishes for the continued success of the Canadian Association.

A delegation consisting of John A. McAvity, St. John, president of the Maritime Provinces Wholesale Hardware Association, and W. H. Thorne, St. John, N.B., A. M. Bell, Halifax, N.S., and E. K. Spinney, Yarmouth, N.S., of the same body, attended to discuss the probable formation of a Dominion association, or the affiliation of the Maritime body with the National organization. It was arranged that the two bodies would co-operate on matters of mutual interest, and the details of making the National organization a success will be worked out by representatives of the two bodies.

The meeting was very satisfactory in its results, and one important feature was the settlement of the many differences which are bound to arise between competitors in business in the course of the year.

Officers Elected.

President — Mr. William Vallance, Wood, Vallance & Co., Hamilton.

Vice-President—Mr. T. H. Newman, Caverhill, Learmont & Co., Montreal.

Secretary-Treasurer—Jenkins & Hardy, Toronto.

Executive Committee—Thos. Birkett, Sr., of Thos. Birkett & Sons Co., Ottawa; Alfred Jeannotte, of L. H. Hebert, Montreal; J. G. Lewis, of Lewis Bros. & Co., Montreal; T. G. Dexter, of H. S. Howland, Sons & Co., Toronto, and D. H. Howden, of D. H. Howden & Co., London.

THE BANQUET.

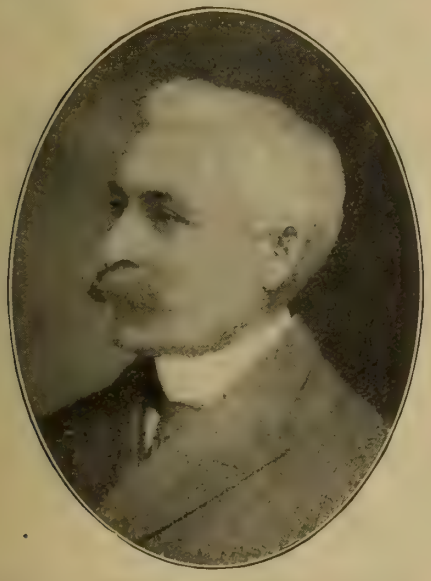
Tuesday evening a banquet was tendered by President Whitwam to the delegates and the representatives of many of the hardware manufacturing firms, in the banquet hall of the King Edward Hotel.

The banquet was a most successful one in every respect. The menu was first-class, the guests in good spirits, and everything went off with a swing. There was not a dull moment during the evening. Jokes were liberally cracked and the speeches were, on the whole, well spiced with wit. Mr. Whitwam occupied the chair, and he was a good chairman as well as an amiable host. Those present were:

S. O. Greening and R. H. Merriman, B. Greening Wire Co., Hamilton; Arch. Macfarlane, Stanley Rule & Level Co., Montreal; C. G. McGhie, Welland Vale Mfg. Co., St. Catharines; Thos. G. Dexter, H. S. Howland, Sons & Co., Toronto; Jas. Maxwell, David Maxwell & Sons, St. Marys; John Stevely, Columbia Handle & Lumber Co., London; Geo. A. Childs, United States Steel Products Export Co., Montreal; Geo. W. Howland, Graham Nail Works, Toronto; A. W. Taylor, Parmenter & Bulloch Co., Gananoque; J. Hardy and S. J. Frame, Jenkins & Hardy, Toronto; Hon. J. R. Stratton, Peterboro Locv Co., Peterboro; W. J. Lind, Independent Cordage Co., Toronto; John M. Taylor and Adam Taylor, Taylor-Forbes Co., Limited, Guelph; H. Clucas, Canada Paint Co., Toronto; A. Jeannotte, L. H. Hebert, Montreal; W. Vallance, Wood, Vallance & Co., Hamilton; W. L. Cummer, Dowswell Mfg. Co., Limited, Montreal; A. M. Bell, A. M. Bell & Co., Halifax, N.S.; W. H. Thorne, W. H. Thorne & Co., St. John, N.B.; John A. McAvity, T. McAvity & Sons, St. John, N.B.; E. K. Spinney, E. K. Spinney, Yarmouth, N.S.; T. H. Watson, Toronto Bolt & Forging Co., Toronto; J. P. Steedman, Gurney Scale Co., Hamilton; T. H. Newman, Caverhill, Learmont & Co., Montreal; H. Donald Hope, managing director of Kynochs, Limited, Birmingham, Eng.; A. W. Campbell, inspector of good roads, Toronto; W. Starke, Starke Hardware Co., Ottawa; C. E. Britton, Cowan & Britton, Gananoque; Thos. B. Lee and A. Burdett Lee, Rice Lewis & Son, Limited, Toronto; Col. J. B. MacLean and W. L. Edmonds, Hardware and Metal, Montreal and Toronto; C. A. Whitwam and W. O. Matthews, Hobbs Hardware Co., Limited, London; D. H. Howden, D. H. Howden & Co., London; James G. Lewis, Lewis Bros., Limited, Montreal; Ernest J. Fry, Peck Rolling Mills, Limited, Montreal.

The Toasts.

The toast list was well selected, and President Whitwam, before proposing



WIRE NAILS
TACKS
WIRE

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

the first toast, said that he was thankful to say that the day was past when it was considered that a fellow business man was an enemy. "There is a common interest and a common bond between manufacturers and wholesalers," he declared amid applause.

"Our Country" was proposed by Mr. Henry Newman, during which he referred in eloquent terms to the growth and development of the Dominion and the great possibilities that were in store for it. The first to respond to this toast was the Hon. James Stratton, who said that Canada was thirteen times larger than Germany, and twice as large as India. "I have," he said, "great confidence in the patriotism of the Canadian people. Canada to-day possesses the longest and the best line of railway, and even the best speculative railway stock, in the world." He referred to the Canadian Pacific Railway. "Pioneers of to-day follow the iron horse. In the years gone by they preceded the iron horse." Canada, he said, would eventually be the granary

Mr. C. A. Whitwam, of the Hobbs Hardware Co., London, the Retiring President.

of the world, and he had not a doubt about it.

Mr. John Stevely followed, saying that the people of Canada were happy and well governed, while the resources of the country were practically inexhaustible, and in many respects this country is far in advance of the United States. "At one time, Canada was a good country to leave; now it is a good land to live in." This, he said, had been discovered by Canadians who had gone to the United States, and he was glad to say that they were now coming back by thousands.

Colonel MacLean said that the preceding speakers very properly referred in eloquent terms to the great expansion in Northwestern Canada; in fact the outlook there was so promising that the whole world was talking about it. Business men of Ontario, Quebec and the Maritime Provinces were inclined, however, to overlook most important developments near their own doors. The district lying between Ontario and Quebec, and the Hudson's Bay, would, within twenty-five years, have a population larger than the combined population of Ontario and Quebec to-day; it would be not only a great mining but manufacturing and farming district. Experts say that it contains the greatest iron property in the world. It has already been proved that it has the greatest nickel areas. Within the last few days it had been stated by a United States expert that it might yet become one of the greatest copper countries. Two years ago a man who had spent twelve months exploring the country stated that it had an enormous area of good farming land, and this has since been admitted by the Hudson Bay Co., whose policy it is to keep miners and settlers out and to retain the rich fur preserves.

The next toast on the list was "Our Association," and President Whitwam in proposing it said that the association had not been formed with the idea of "holding up" any one or of getting tainted money. It was merely formed for the benefit of those in the hardware trade and to remedy certain evils which then existed. "And," said he, "we have been fairly successful." They may have tried to do too much, although he had come to the conclusion that they had not. "We believe that every one should make a fair profit and have a certain return for his labor." (Applause.)

Mr. William Vallance, in responding, said that the usefulness of the association had been very great, but that he hoped it would be still greater. It had been particularly useful in bringing the members of the hardware trade together, and thereby enabling them to become acquainted with each other. "The machine has worked well, and much better than we at first expected it would," he declared amid applause.

Mr. Newman prefaced his remarks by announcing that Mr. Vallance, who was the first president of the association, had again agreed to become the executive head. This announcement was greeted with applause. Mr. Newman spoke of the good work the association had done, and he hoped that it would eventually be affiliated with the Wholesale Hardware Association of the Maritime Provinces, whose representatives he was glad to see present. He said that he had always esteemed the manufacturers, although the jobbers had not always been able to get what they wanted from them. (Laughter). "However," he said, "we have done our best, and one thing we have accomplished at any rate is that we have brought the

Right Now is the time to find out the whole truth about a good paying paint specialty. ***Sherwin-Williams Buggy Paint*** is a good seller all the year round, but especially so at present, when buggies are being repainted after the summer's work.

There's satisfaction and profit for every dealer in selling the ***Sherwin-Williams Buggy Paint.*** It has the toughness, durability and strength of color to thoroughly adapt it to its use of repainting old or worn carriages and buggies. It gives a high gloss finish, which has also made its use popular on boats, porch and lawn furniture, and like objects exposed to the weather.

The dealer could not add to his stock a product which will sell better the year around than ***S-W. Buggy Paint.***

We are giving it the most forceful publicity direct to the consumer; and the dealer has in addition the help of first class display features and color cards, beside the other special aids the Sherwin-Williams Co. gives its agents, a full description of which may be obtained from our nearest offices.

manufacturer and the jobber closer together. It must be remembered that upon the wholesaler largely rests the burden of carrying the debts, and we hope that the manufacturer will appreciate this."

Mr. James Lewis, although persistently called upon for a speech, calmly remarked that it was not his intention to make a speech, but he thanked them for coupling his name with the toast.

Mr. William Starke made one of his usual witty speeches. He said that although it was some time since he was elected president of the organization he had never been able to discover why they had elected him. Like the other speakers, he referred to the good work the association had done. "With Sir William Vallance as president, and Sir Henry Newman as vice-president, is there any reason why this association should not go ahead?" queried Mr. Stark amid laughter and applause.

Mr. T. B. Lee, another ex-president of the association, said that Mr. Vallance, who had laid the foundation of the association, had now become they keystone in the arch which supported the organization. They had confidence in him, and during his presidency they would not be afraid of even the manufacturers.

Messrs. James Hardy and S. Frame followed briefly.

Mr. Vallance proposed the toast of "The Sister Associations," as represented by the gentlemen present from Halifax, St. John, and Yarmouth.

Mr. John McAvity said that before they formed their association in the Maritime Provinces members of the hardware trade used to fight like cats and dogs. "That is how we lost our hair," he facetiously remarked.

Mr. W. H. Thorne said that he was sorry he had not been born a hardware man in Ontario, as he felt that hardware men in that Province possessed many advantages. "Our aims and objects in the Maritime Provinces are much the same as yours. We have tried to develop the interests of the hardware trade, not for the purpose of increasing profits, but to lessen the asperities caused by competition," he declared amid applause. He said that in the east they felt just as keen an interest as those in Ontario in the development of the Canadian Great West, and on behalf of the Maritime Association he expressed the hope that there might be closer relationship between the trade there and here.

Mr. A. M. Bell declared that in the Maritime Provinces they had a range of ocean ports which were second to none in the world. He said that people were often told to "Go to Halifax," and he had great pleasure in saying that Halifax was a good place to go to, and that on behalf of the trade in the Maritime Provinces he extended to the western association their most cordial thanks.

Mr. E. K. Spinney prefaced his remarks by paying a tribute to what the MacLean Trade Papers had done for the up-building of closer trade relations between the Maritime Provinces and the west. He expressed a wish for affiliation between the hardware trade in the east and west, and declared that from his present visit to Toronto and meeting with the trade there he had received great benefit.

IT IS SAFE

LOOK HERE for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

New York Office: 99 Chambers St.

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

The Jas. Stewart Mfg. Co.

WOODSTOCK, Ont., and WINNIPEG, Man. LIMITED

In response to the toast "Manufacturers," Mr. C. Britton said that as far as the manufacturers and jobbers are concerned there was no question that an honest arrangement between the two would be beneficial to all, and that during the forty-four years he had been in business he had never had any reason to complain about the treatment accorded him by the wholesale hardware trade. He claimed that it did not pay in the long run to figure over an extra five or ten per cent. It was better to keep prices steady and earn a fair profit. To him one man's dollar was just as good as anothers, and if a cut was made for the benefit of one the other got it as well. "Break prices 10 per cent. and the other fellow will not have as ask me to accord him the same privileges," he said amid laughter and applause.

Mr. James Maxwell said that he realized that the jobbers' association was a good thing, and that the members should stand together. He said that they should have a fair profit on the business they did, but they should also have faith in each other. "I think," he said amid applause, "that the man who buys from the manufacturer at less than the regular price is just as bad as the manufacturer who sells below the regular price."

Other speakers to this toast were Messrs. Wm. Cummer, John M. Taylor, Geo. W. Howland, Thos. Watson, and J. P. Steadman.

Mr. Taylor's address was of the usual witty type with many hits at the expense of the other gentlemen present, while at the close he gave some original and impromptu verse which was likewise personal in its character.

Mr. Geo. W. Howland, in response to persistent calls made upon him, recited in capital style "The Habitant."

A. W. Campbell, Good Roads Commissioner, and W. L. Edmonds, responded for the ladies.

A cordial vote of thanks was tendered Mr. Whitwam, Hon. Jas. Stratton and Mr. A. W. Campbell moving the resolution. Mr. Whitwam feelingly replied, and declared that he had always been actuated by a desire to promote the interests of the wholesale hardware trade.

Crumbs From the Banquet.

Mr. Hope, of John Kynocks, Limited, Birmingham, had to respond to a special toast proposed for his benefit by Mr. Wm. Starke, who declared that there was only one Birmingham and only one "Hope" to respond to it.

"27½ and 2 per cent. You can book our order at that."—Mr. Starke.

"Howden, here's to your new building, and may it build up business."

"Touch your glasses to Mr. James Lewis, the man who never cuts prices."

"Here's to George Howland, the man who is never satisfied with the price of nails."

"Here's to John Taylor, the man who was never sat on."

"Here's to the Sewing Machine King"—Mr. Henry Newman.

"Mr. Jeannotte was the youngest benedict at the feast. He was only a month old."

Is it possible that Mr. Bell, who is about 100 pounds lighter than Mr. Spinney, lent the latter gentleman his dress suit? He said he did.

STOVES AND TINWARE

SUBSTITUTES FOR COAL.

IN view of the apprehension in some quarters that there will shortly be another general strike in the Pennsylvania anthracite regions, the many consumers will be glad to learn that two substitutes for coal have recently been put on the market.

One of these new fuels is being manufactured by the Universal Ideal Coal Co., and many excellent qualities are claimed for it. Peat is its raw material, and the process by which it is turned into a commercial article is the result of many years' experimenting in the effort to extract all the moisture from peat. The difficulties hitherto met in making peat into satisfactory fuel have been eliminated by an electrochemical process, which destroys entirely the nature of moisture in peat, and changes it into real hard coal, thus doing what nature takes centuries to do. Among the advantages claimed for the new fuel are that there is an entire absence of smoke, soot, dust, clinkers, or sulphur. Furthermore, this coal, which is marketed in the shape of cylinders an inch and a half in diameter, and about two inches in height, is perfectly clean to handle. The headquarters of the Universal Ideal Coal Co. are at 781 East Notre Dame street, Montreal, but it is their intention to erect plants in close vicinity to all large centres of population where peat beds are available.

The other new fuel, which has already been described by Hardware and Metal, is "Briquetted Coke," which was just last week put on the market by the Montreal Light, Heat & Power Co. It is retailing at $5.50 per ton, and promises to become very popular.

TIN USED BY CANNERS.

STATISTICS concerning the tin plate importations of Canada show that for the year ending June 30, 1904, there were imported into Canada from Great Britain 41,218,600 pounds of tin plate, and from the United States 8,241,400 pounds, or a total of 49,640,000 pounds, of which a large proportion was consumed in British Columbia, though in that year the salmon pack on the coast was comparatively a small one.

This year the imports of tin plate for British Columbia alone were 150,000 boxes of 112 pounds each, or 16,800,000 pounds, of which 60 per cent. came from Great Britain and 40 per cent. from the United States.

The salmon canners are urging upon the Tariff Commission the necessity of leaving conditions as they are rather than imposing a duty against the Welsh tin, as some propose.

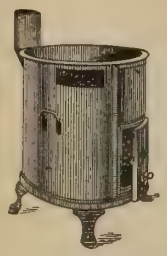
Since the Federal Government has allowed trap fishing on the Pacific Coast, a demand for wire rope and wire netting for the construction of traps has sprung up, and the canners ask that these articles be placed on the free list. They point to the fact that they are in competition with American salmon canners on the open markets of the world, and that the Americans can secure their wire rope and wire netting at much less cost than it is possible to obtain the same in Canada.

DIFFICULTY OF REPAIRING STOVES.

REPAIRING stoves is a nerve racking task, even for the best mechanics and under the most favorable circumstances, so that when the circumstances are unfavorable — and stove manufacturers generally see to it that they are—it is about as trying an undertaking as the stove man or any one else can conceive.

With the many improvements along the line of stove manufacturing, very few have been inaugurated with a view to simplify the replacing of the broken or burned out parts with new ones, says the Metal Worker. It is often remarked among members of the retail trade that if the men who are responsible for the manner in which stoves and ranges are constructed were compelled to repair one of them occasionally they would pay more attention to this detail of the business than they do at present, or ever have done. No expense seems to be spared in making stoves handsome in appearance, and to insure their rendering good service in every way. Yet many of the very best grades are so constructed that a mechanical genius with all the attributes of Job is required to do any repairing that they may need. In fact, there are many of them on the market so fearfully and wonderfully made as to give the impression that they were designed with an eye single to preventing their ever having an old casting replaced with a new one.

It is well understood that no one expects stoves to repair themselves, nor to be able to do it by simply pushing a button. But it does seem as if manufacturers ought to give more attention to this matter, and so make it a little easier for the retailer, upon whom the burden falls.



In many instances bolts are put in places where it is almost, or quite, impossible to either hold or cut the nut when necessary to remove it. Any one who has ever attempted the feat knows that it is no easy matter to turn the nut on a stove bolt after it has been exposed to a hot fire for several months or years. As a rule, it can't be turned, and it thus becomes necessary to cut the nut with a chisel, if it can be reached with one; and when it cannot, it is "a condition and not a theory that confronts" the mechanic. A range that has to have all the fire box fixtures, including the water front, removed in order to put in a new grate, may be durable

HAMILTON, CANADA

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

and capable of rendering excellent service in the kitchen. But when the time comes to make repairs—and it is sure to come—it can hardly be said to be a success at restricting the spread of profanity.

What little protesting the dealer does is usually to the traveling salesman, and that suave individual invariably hides behind the stock argument: "Our line seldom needs repairs," or, "You get paid for the time spent in making repairs," neither of which is true, for all stoves need repairs sooner or later, and it is not always possible nor expedient to charge a good customer all it is actually worth to do the repairing, especially if the stove was sold and recommended by the dealer himself. Men in the stove or any other line of business, find it hard enough to collect reasonable accounts, and therefore shrink from presenting a bill that they know is exorbitant from the customer's point of view.

Card
Page 94

It might be suggested that dealers refuse to handle such stoves as they know are difficult to repair, and let it be known why they refuse. As soon as the manufacturers find they have got to cater somewhat to the retailer's likes and dislikes they will begin to do so, especially if his likes and dislikes are founded on common sense, as they would be in this case.

SAFETY FURNACE PIPE.

READERS of Hardware and Metal will have noticed the advertisement appearing in these pages of recent weeks bringing to the attention of the trade the safety furnace pipes, etc., made by the Perfection Safety Furnace Pipe Co., 3 Brookfield street, Toronto. This pipe is made by specially adapted machinery, by men of long experience in the furnace business, who recognize that good tinsmiths are scarce and cannot be procured when wanted. They point out, therefore, that by buying these pipes and fittings dealers can go ahead with furnace jobs at any time, there being no waste of material whatever when using the perfection pipe. The manufacturers call particular attention to their special make of round hot-air pipes, there being only one lapped joint in every four joints, the other joints being double locked. This gives a saving of from seven to ten feet in every hundred, an important saving of material. A full supply of hot-air pipes, elbows, angles, register boxes, galvanized cold-air pipes and elbows, and galvanized smoke pipes and elbows will be kept in stock, and this will undoubtedly prove a great convenience to dealers, enabling them to buy ready-made all the material required for furnace jobs without delay. Correspondence is solicited by the new company.

BUFFALO BLACKSMITH HAND PUNCH.

THE blacksmith hand punch illustrated herewith is a new tool developed and manufactured by the Canadian Buffalo Forge Co., Limited, Montreal. Its chief merit lies in its handiness and adaptability rather than on account of any remarkable results in operation. By means of the long leverage of handle through a cam movement in the head it will punch as large as a half-inch hole in No. 14 iron, or a quarter-inch hole in No. 4 iron. Bands and straps in position can be easily and quickly punched where otherwise they must be detached and heated or carried to a stationary punch. In sheet metal and tank work where it is desirable that the rivet holes in lap joints should be punched as both sheets are held in position, this machine will be readily appreciated. The narrow head permits punching holes in curves of small radius,

Buffalo Blacksmith Hand Punch.

such as tank head flanges, ferrules, and bands of small diameter. The clearance from die to end of head is only $\frac{5}{8}$ of an inch so that holes can be punched close up to corners, which is a very valuable feature in punching light angle iron frames. The total depth of jaws is 2 inches which allows a hole to be punched that distance in from the edge of the plate.

The head of punch into which the handles are fastened is a solid drop forging machined to take the die and punch, retainers, pins, etc. Both punch and die are held in steel bushings or sleeves which are so arranged that different sizes can be readily substituted. The leverage is worked through a cam which forms part of the upper level, and it should be noted that the working pressure is brought to bear directly on the punch and not through intermediate fittings which insures the easiest possible action and does not subject other parts to unnecessary strain. The machine measures 32 inches over all, weighs 15 lbs., and is furnished with punches from three-thirty-seconds to one-half inch, advancing by thirty-seconds.

ASBESTOS SAD IRONS.

The Dover Mfg. Co., Canal Dover, Ohio., manufacturers of the celebrated asbestos sad irons, furnish an iron for every purpose. The company are advertising very extensively, being determined that these irons shall be known in every home. They are also offering $1,000 in cash prizes for the best advertisements and window displays of the asbestos sad irons. Full particulars regarding these contests will be furnished dealers on request. A booklet giving a complete description of the irons will also be forwarded to those who are unacquainted with their many merits.

NEW STOVE FOUNDRY.

Battram & Hamilton have commenced the manufacture of stoves at Thornbury, their leading line being the Cinderella Special, a steel range which is bound to win favor amongst the trade and be very popular amongst housekeepers. Another line manufactured is the Classic Cinderella, a cast iron range which has already met with a large sale. Stove dealers throughout the country are requested to communicate with this firm regarding agencies and territory.

The "Up-to-Date" and the "Ordinary"

As a practical salesman wouldn't you rather sell an "up-to-date" range rather than the "ordinary" kind?

Particularly when the "up-to-date" is bristling with points of merit and is arranged with all practical features of convenience and utility?

And when through its modernness and thoroughness of construction it will save fuel and time, thereby eliminating expense and worry?

And when the up-to-date will assuredly make you a friend?

And when this friend will therefore give you his other business, and you will have obtained actual advertising results without actual expense?

Better decide to be "up-to-date" and handle the

Walker Pilot Steel Range

Because it possesses all the above "up-to-date" advantages, and yet ***sells at a competing price and makes you about double the usual profits.***

Unbiased Report on Base Burners

A Valuable Guide for Dealers

taken from

UNITED STATES TRADE REPORTS

Early in August the United States Trade Reports decided to send an expert to Canada to investigate the merits of Base Burners made in Canada. No manufacturer had any knowledge that such an investigation was being conducted and as the report is based absolutely on merits it is a valuable guide to dealers. Below is given the exact report as published last week:

The Best Make of Base Burners.

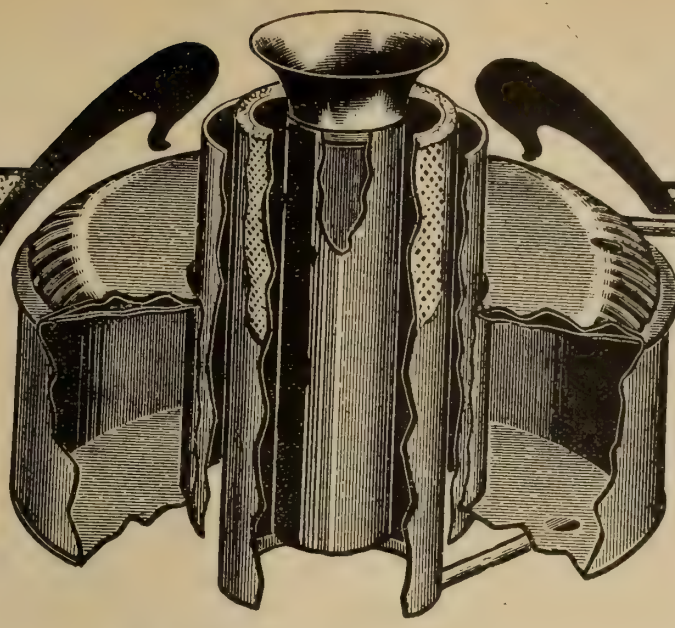
We fully appreciate the difficulties the prospective buyer finds in obtaining a truthful and correct answer to the question, "Which is the best make of Base Burners?"

In the first place, he himself can not know all the different kinds, and, therefore, can not decide for himself.

Second, he can not depend on the opinions of others, as they, like himself, can not know all the various makes, or may be prejudiced in favor of the kind they use.

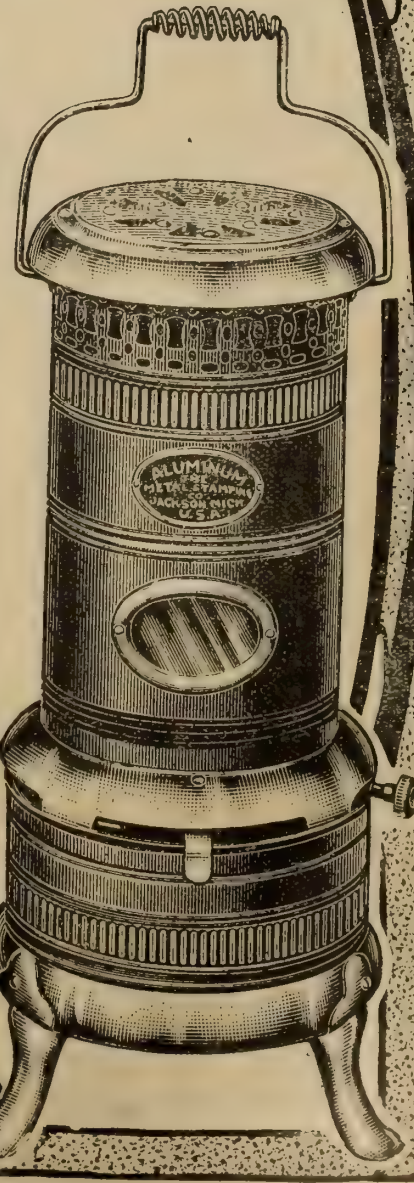
Third, he can not take his choice from reading matter and advertisements of manufacturers, since one and all, believing they are right and justified in saying so, claim their respective make the best.

Fourth, he can not expect to have his question answered by any journal devoted to the trade, for in so doing such journals would commit financial suicide, since all other manufacturers, except the one given as the best, would at once withdraw their advertising patronage.



In view of the difficulties to a correct decision, this paper decided to make a thorough investigation, the result of which would be a decided answer as to which is the best. We fully realize the responsibility of making such a decision, since we are aware that our readers will accept it as final and worthy of fullest credence. For the benefit of new readers, we wish to state that such faith on the part of our old readers is caused by their knowledge of the invariable method pursued by the Reports by which we can conscientiously give an independent and unbiased report on any article manufactured. This method consists in examining closely all the various makes by means of our editorial and reportorial staff without the knowledge of any manufacturer interested, and, further, without making any charges, accepting any gifts or soliciting any advertisement from any one whose wares we may pass upon.

As a result, we are prepared to state that there is no make of Base Burners on the market to-day equal to the "Grand Idea," manufactured by the Guelph Stove Company, of Guelph, Ont., Canada. These base burners are made of the best material, are durable in use, perfect in construction, and will give entire satisfaction at all times.



The company is thoroughly reliable in every respect and can be depended upon. Their business is conducted on a line that is pleasing to each and every customer, and promptitude is a special feature of their business methods. They also stand high commercially.

Our interested readers will do well in addressing them direct, as we are sure that all dealings with them will prove mutually beneficial and profitable.

The Guelph Stove Co., Limited, Guelph, Ont.

The Aluminum Oil Heater

A warm seller, over the million mark in sales simply because it is the best and only positively safe Oil Heater in the world. Stands supreme in practical merit. "Every sale a seller"—neighbor tells neighbor and they all want the Aluminum Oil Heater.

NOTE THAT SAFETY BURNER

At the top of this page we illustrate our great Safety Burner. See the air passages which give ample circulation and perfect ventilation, assuring perfect combustion. As there are no perforations about the burner, clogging up is impossible. No oily residium, no dirt, no odor, no danger.

Oil in fount is never in direct contact with wick, so overheating and explosions are impossible.

Simple in operation as a lamp and much safer.

Radiates heat all over like a base burner—from bottom, sides and top. No other Oil Heater will throw out heat this way. It is the only Oil Heater with partition in the drum to deflect the heat downward—the only Oil Heater which heats by radiation as well as by circulation.

Your trade deserves the best—give them the Aluminum Oil Heater. You will find it easier to put them in stock than to keep them there.

We advertise them generously; get your orders in early.

We guarantee every Aluminum Oil Heater.

METAL STAMPING CO.

DEPT. 12

JACKSON, MICHIGAN, U.S.A.

W. J. McMURTRY, Galt, Ont., Canadian Agent.

A PROMOTOR'S ENTERPRISE

IN Hardware and Metal of September 30 an article was published on the Canadian tin plate industry, which has met with commendation from readers in all parts of the Dominion. The proposed establishment of tin plate mills at Morrisburg, Ont., was commented upon and it was clearly shown that the industry could not be successful at that point without a very heavy duty being imposed on all imported tin and Canada plates, all users of these metals throughout Canada being taxed in an endeavor to build up an enterprise which from the beginning could have no hope of success. It was pointed out that the tin plate industry was not established in the United States until that country had a population of between 60,000,000 and 70,000,000 people and therefore Canada with only 6,000,000 people could not hope to sustain a tin plate industry, especially at such a location as Morrisburg, which is not near the base of supplies for either raw material or fuel.

In looking into the matter still further it appears that the proposition to establish the industry at Morrisburg is one which we must consider as purely a promoters' enterprise, which readers of Hardware and Metal would do well to avoid in making investments. Names of several well-known men have been used in unauthorized manners and several who have been announced as directors have given instructions that their names must not be used in connection with the enterprise, Messrs. W. K. George, Toronto, and T. C. Davidson, Montreal, having made public announcement to this effect.

The promoters of the Canada Tin Plate & Stamped Steel Company are Messrs. J. Wesley Allison, G. H. Meldrum and N. D. Lewis, and they propose to dispose of 15,000 shares of stock at a par value of $100 each, $500,000 being preferred and $1,000,000 ordinary stock. In securing subscriptions men have been told that certain capitalists were investing large amounts in the concern, the truth being that the men referred to had refused to invest a dollar in the enterprise. The promoters in their prospectus also make the definite statement that "the Government have expressed their intention of aiding and fostering the industry"—a most unlikely story as the Dominion Government is not in the habit of making advance statements of this kind, particularly to enterprises which as yet only exist on paper.

From the inception of the enterprise the promoters have worked the newspapers for numerous write-ups and the names of such American capitalists as the Vanderbilts were freely used as being behind the enterprise. An agreement was entered into with the town of Morrisburg, a conditional arrangement being made whereby the town agreed to supply 700 horse-power. Owing to the Dominion Government declining to allow the use of the canal water to develop this power, however, a hitch has occurred and the work of erecting the power house has not been gone on with. The Reeve of Morrisburg has resigned and the people are divided on the matter of going ahead with the plan of aiding the enterprise. But in order to encourage the subscription of stock the company is going ahead with their part of the construction work.

The prospectus of the company contains an alluring table outlining the estimated profits. According to Mr. Lewis on an output of an eight-mill plant of 20,000 tons the profits would be $200,000, from which if a dividend of $24,000 is deducted on preferred stock there would be a balance of profit equal to 35 per cent., amounting to $176,000. Anyone could work up a table showing large estimated profits, but as Mr. Lewis is announced as an experienced man from Cardiff, Wales, and one of the pioneers of the industry in the United States, some investors may be led to consider the estimate possible of realization. Investigation, however, does not show that Mr. Lewis is one whose figures should be relied upon, he having no record as a manager in the United States and having only been engaged by a mill in Pittsburg for six months in a minor capacity, his duties being in aiding in securing workmen and his engagement terminating about the time the tin mill was started. If Mr. Lewis was a capable tin mill manager it is likely that he would still be in Cardiff rather than spending a year or two in Montreal on the strength of the flotation of the stock and possible success of the Morrisburg proposition.

The plan of the promoters is evidently to induce the Dominion Government to recognize the enterprise by giving a small duty in its aid. With this assistance the company's stock could be more easily disposed of. But with Messrs. Allison and Meldrum's experience as promoters of the Cramp Steel Company at Collingwood before them investors should act cautiously. This latter concern was floated five or six years ago by Mr. Allison and in response to large advertisements in the Toronto papers a large amount of the stock issue of $2,820,000 of common and $594,000 preferred was disposed of to farmers and others who have never realized a cent or saw a wheel turned in return for their money. The Cramp Company's plant with its assets claimed to be worth $3,414,600, including real estate, buildings, plant, water rights, quarries, mines and franchises, placed at $3,339,725.86, stock subscribed with payments not yet due of $35,000 and cash on deposit in the bank of $39,874.14, was finally disposed of in September, 1904, to the Northern Iron & Steel Company for $70,000 and insured by the latter concern for $25,000.

The announcement that a duty on tin plate might be established raised a storm of protests from the canners of British Columbia who appeared before the Tariff Commission. Such a duty would also have a serious effect upon the fruit canners in Ontario and the canning industry in Nova Scotia, the result being that many concerns now progressing favorably would be crippled. The canners point out that up to about 1880 there was a small duty of five per cent. on tin plate but this was taken off at the solicitation of the users of tin plate throughout Canada and under the revised tariff pig tin and tin plate were put under a separate heading to Canada plate and galvanized sheets. It would, therefore, be a backward step to impose a duty at this time when the importation of tin plates is only $1,500,000 annually in comparison to the consumption in the United States of $26,000,000 annually in 1891 when the McKinley tariff was put on and the industry established in America. Even though mills were established at Morrisburg importations would have to continue as the demand is of such a diversified character that it could only be supplied in Wales.

The history of the tin plate industry in the United States shows clearly that a small duty will only have the effect of taxing the consumer without aiding the manufacturer. Even the duty of one cent per pound, equalling at present prices about 40 per cent., with importations of $18,156,773 into the States in 1883, did not stimulate the industry. But these facts relating to the development of the industry in the United States can best be outlined by the following extract from "Tariff History of the United States," by F. W. Taussic, LL.B., Ph.D., Professor of Political Economy in Harvard University:

"A different aspect of the tariff of 1890 appears in the rise in the duty on tin plates. This article had never been produced in this country, and had never been subjected to duties comparable to those on other manufactures of iron. In 1862 a duty of twenty-five per cent. had been imposed, and had been retained until 1872, when at the time of the general reduction of that year it was lowered to fifteen per cent. In 1875, when the general reduction of 1872 was repealed, the rate was changed to a specific duty of 1 1-10 cents a pound, equivalent to about twenty per cent. at the prices then ruling. But this change did not have any effect in stimulating domestic production, and in 1883 the duty was reduced to one cent a pound, equivalent, at the prices of 1883, to an ad valorem rate of about thirty per cent. At that rate the importations had been very large, twenty millions of dollars and more a year, and the domestic production had been nil. The question presented itself squarely whether a further and great extension of the protective system should be made. Those who believed that system to be wise, naturally maintained that this article had been unfairly singled out for a specially low rate of duty, and in the Act of 1890 a duty of 2 2-10 cents a pound, equivalent to about seventy per cent., was imposed."

If it took a duty of 70 per cent. and a population of nearly seventy millions to give the tin plate its start in the United States in 1891 can it be expected that a small duty of even 15 per cent. with our population of only 6,000,000 will result in the establishment of a similar industry in Canada at this time? And with the natural disadvantages of the Morrisburg location and the unsuccessful business records of the promoters, could success be looked for even if the duty and population were favorable? And also, how many Canadians would even consider the imposition of a similar tariff to that existing in the United States, the duty of 2 2-10 cents per pound, equalling at present prices a protection of about 84 per cent.?

In the United States the metal industry was built up gradually by first producing the heavier goods for which there was the greatest demand. Canada's experience must be of a similar nature. But Canada is still importing large quantities of metal products on which as much as 30 to 35 per cent. duty is imposed. In the face of this the effort to promote a tin plate industry in Canada at present must be considered preposterous by anyone who gives the matter the slightest study.

FIVE versus ONE

One Metallic Ash-Sifter

will outlast five wooden sifters. There is such a small difference in the price of the metal and wooden sifters that the buyer of the wooden sifter virtually throws away four purchases and the seller four chances for sales. Our metal sifter, besides, is easily worked, consumes less time, ***and has no dust.*** Surely you don't carry wooden sifters! Better read our circular again!

ARK-EL-ITE
TRADE MARK

$1.50

pays for trial order of 10 six-lb. packages in case of

Asbestos Stove Lining

It is packed in heavy cardboard boxes, no waste from broken bags. The cardboard boxes have finely printed cover and make a very attractive showing.

It is an improvement over Fire Brick for lining and repairing Cooking and Heating Stoves, Ranges, etc. It is easier to handle and nets larger profit to the dealers.

It can be applied in a few minutes, and there is none of the trouble making an exact fit as in the case of Fire Brick.

MANUFACTURED BY

The Francis-Frost Co., Limited.

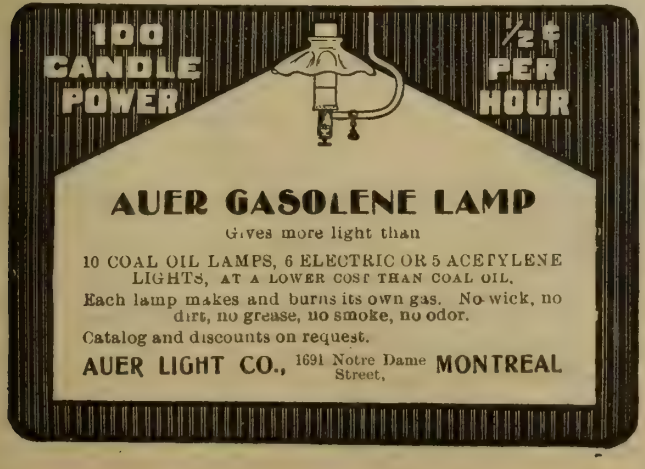
Makers of Celebrated "Ark" Brand Paints.

A NEW DEPARTURE

The Perfection Safety Furnace Pipe Co.

MANFRS. OF ALL KINDS OF

Hot Air Pipe, round or square,
Elbows, Angles, Register Boxes, etc.,
Galvanized Cold Air and Smoke Pipes.



Galvanized casings made for any make of Furnace. Our pipe is made to save you time, labor and material. SEVEN to TEN feet of pipe saved in every hundred Fittings made to fit. Made by specially adapted machinery, and under the supervision of practical furnace men of long experience.

We also lay out furnace jobs for our customers free of charge.

Freight paid on all orders of 500 feet or over. See terms, etc., in our catalogue sheet, which will be sent upon application.

PROMPT SHIPMENTS—GOODS PROPERLY CRATED.

No. 3 Brookfield Street, - - TORONTO, ONT.

WE KNOW THAT THEY ARE GOOD
WE MAKE THEM

When we say that our

Furnace Cement

and

Stove Putty

are the articles par excellence for you to carry, we are just saying what scores of Hardwaremen are proving. To test our reliability you must have a "Scarfe Stock," when you also test the articles' saleability.

We can ship you Barrels, Half-Barrels or Small Packages. No matter what amount you order we will wager it will be the best money's worth you have had for many a day. That gives you a clear field for profit.

Shall we send prices?

SALE MAKING

Few people buy a range without careful examination and thorough demonstration.

To sell you must have a range of good appearance, unqualified merit and with allmodern improvements and features. The

IMPERIAL OXFORD RANGE

has more talking points than any other range in the market. It is handsome and contains every good feature with no drawbacks.

The oven, of course, is the one thing you'll be asked about, and on this point you can say more for the Imperial Oxford than can be said for any other range. **The Diffusive Oven Flue** is found in no other range, and this is really the only important advance in range building made in years. Explain what it is and what it does and you've sold an Imperial Oxford.

PLUMBING MUDDLE.

WASHING dirty linen in public is a pleasant proceeding for the old women of both sexes, but it is anything but pleasant for any of the participants. During the past week the plumbing trade in Toronto has become mixed up in public controversy over matters which should be discussed and thrashed out entirely amongst themselves. Other trades have organizations to govern matters pertaining to their various trade interests, but it seems to be left to the plumbers to make their differences the subject for public controversy, newspaper reporters being called in by people who love sensationalism and desire to pose as martyrs as soon as opportunity offers.

It is needless to say that there have been differences in the Master Plumbers' Association in Toronto during the past two months. If there had not been certain members would not have withdrawn or been expelled, and other members would not have resigned important positions in the association. These differences, however, should be settled within the association and as there is to be a Provincial convention in Toronto next week Hardware and Metal in this issue reproduces the substance of the happenings during the past week as reported in the daily press. As the matter has now reached the courts, an injunction issued and an investigation called for by one of the disputants, the members of the Provincial association should be aware of the facts as it may be necessary for them to take some action at the coming convention.

As stated in another column Hardware and Metal considers that the work of the Master Plumbers' Association has been of great benefit to the general public as well as to the trade. The power for good of the association, however, is being damaged by the sensational articles appearing in the Toronto newspapers, and the best remedy appears to be an open investigation conducted by an impartial committee, the officers of the association allowing the fullest facilities to aid the investigation. If there are any who will suffer as a result of such an investigation it must be remembered that the interests of the great mass of master plumbers throughout the Province are greater than those of the few in the Toronto organization.

It is certain that the matters over which disputes have taken place have been greatly magnified and this is all the more regrettable as the public is being given a wrong impression. At present the situation appears to be going from bad to worse and prompt and courageous action is, therefore, necessary.

It is altogether unlikely that Crown Attorney Curry will be able to work up a case warranting the calling for an official investigation so that if action along this line is desired the move must be made by the members of the association As a preliminary step it would be a good plan for the association to call upon Messrs. Harrison, Reeves and Gray, the three ex-members who are getting columns of notoriety in the newspapers, to throw open their books for a public investigation.

MANUFACTURERS VS. JOBBERS.

A STRONG delegation of jobbers and wholesalers from Western Canada appeared before the transportation committee of the Canadian Manufacturers' Association in Toronto on Wednesday, and protested against the action of that body in seeking to have the present regulations with regard to mixed carloads altered.

Prior to 1903 the rule was that anyone could make up a car, putting in as many different articles as he wished, but having to pay freight on the whole carload at the rate of the highest article in it. For instance, if a manufacturer were to fill a car with a mixed load of buggies, dry goods and hardware, he would pay freight on the whole car at the rate on buggies, because the freight rate on buggies is higher than that on dry goods or hardware.

In 1903 this rule was changed. Since then the possible grouping of merchandise to make up a car lot is confined to the class of articles which any one dealer would handle. For instance, general hardware, paints, oils, etc., could be shipped in one car. Similarly the various things which enter into a grocer's stock could be mixed to make up a car.

This arrangement, of course, militates against certain manufacturers. If a manufacturer makes one article which is sold in a hardware store and another which is sold in a carriage shop, even if they are made under the same roof, he cannot put them in a car together without paying freight on them at broken car lot rates. This, of course, much exceeds the rate when the car is taken complete.

Ever since the last change, in 1903, the Canadian Manufacturers' Association have been moving for a restoration of the old regulation or a betterment of the present rates. They demand that a manufacturer be allowed to use everything which he manufactures in making up a car lot. In spite of the protest of the westerners, supported by a number of eastern manufacturers, the association will persist in its present contention.

A delegation composed of Messrs. J. E. Elliott, of McLennan, McFeeley & Co., Vancouver; C. P. W. Schwengers, of E. G. Prior & Co., Victoria; John Burns, manufacturers' agent, Vancouver; W. G. Mackenzie, of Wood, Vallance & Leggatt, Vancouver, and J. A. Rickaby, of R. P. Rithet & Co., Victoria, represented the B. C. Wholesale Hardware Association, they holding that if the old rule comes into effect that their business will be completely demoralized. In British Columbia it is said that the present move on the part of the eastern manufacturers is in consequence of the commercial travelers' tax put upon their representatives coming into the Province of British Columbia to do business. If they succeed in restoring rule two it is said the B. C. wholesale dealers will undoubtedly press for a still further tax upon these eastern travelers in order to hold their own against the manufacturers of the east.

NOTICE TO ADVERTISERS.

On account of next Thursday being Thanksgiving Day the next issue of Hardware and Metal will be printed on Wednesday instead of Friday. All advertising copy must be received by Tuesday and advertisers are requested to cooperate with us in this arrangement.

PROVINCIAL TAXES RETARD COMMERCE.

FREQUENT comment has been made in these columns on the arbitrary and near-sighted policy of Provincial Legislatures, in taxing commercial travelers. Additional light which has been shed on the matter, has only served to accentuate the impression that these taxes are entirely unwarranted, and are, in spirit, though possibly not in letter, an infringement on the rights of the Federal Government, and an insult to the good sense of the nation.

On Prince Edward Island rests the blame for initiating this class of legislation. A tax of $25 was imposed on all commercial travelers visiting that Province, and the money-making possibilities of the scheme immediately appealed to the hungry legislators of British Columbia. But in this case, the tax was doubled, every traveler selling goods in the western Province being relieved of $50 or $100. Then the Quebec Cabinet, frenzied by their endeavors to make ends meet and thinking that they should be able to go their sister Provinces one better, proposed and carried through the iniquitous statute which forbids traveling representatives of foreign houses from doing business in the Province, except on payment of a $300 tax.

When this last piece of legislation was perpetrated, a storm of protest went up from all over Canada. So strong was popular opposition to such insular enactments that many representations were made to the Dominion Government, praying for an exercise of the right of veto granted by the British North America Act. The British Columbia tax was made the subject of a test and the Minister of Justice was asked to report on its validity, his finding, recently made public, is that the statute is within the rights of the Province to pass it, and, as a result, the Government has declined to interfere.

Where is this thing going to end? Will other Provinces too fall victims to the taxing mania, and keep on increasing the amounts, as has already been done? It is quite conceivable that these might become so high as to be prohibitive, and an obvious interference with Federal rights.

Under the circumstances, it is only to be expected that, in Britain and the United States, uncomplimentary references are being made to Canadian statesmanship. In the States, there are many firms who, if they could work the territory without so many restrictions, would make a connection in Canada sufficient to justify their investing in a Canadian plant eventually. As it is, they are losing confidence in the ability of Canadian legislators, and we have been advised that one large firm are withdrawing their plans to invest nearly half a million dollars in Canada, owing to the bad impression that the recent enactments have made.

No objection is made by foreign manufacturers to a legitimate tariff; but the numerous petty restrictions being imposed upon them has naturally aroused great antagonism.

In view of the Dominion Cabinet's decision to make no move in the matter, and the avowed intention of the Quebec Treasurer to enact an even more comprehensive statute, it behooves the business men of Canada to demand purely Federal control of the nation's trade and commerce. This we believe to be the feeling of the vast majority of Canadian merchants, and to this opinion, if properly expressed and conveyed, the Government must needs bow.

THE IMPORTER AND THE TARIFF.

IT is to be hoped that during the investigation into the tariff which is now being made the interests of the importer will not be overlooked.

When a case is before a court of law all parties interested are called upon to give evidence. The importers of this country are interested in the Customs tariff, and their evidence should certainly be taken.

Canada is a protectionist country. Nine-tenths of the people believe that at least a moderate tariff is necessary to the welfare of the Dominion. But in preparing a Customs tariff the interests of all should be considered. The manufacturers, the lumbermen, and the agriculturists of different kinds are being heard, but the merchant—the man who distributes merchandise wholesale and retail—does not seem to have an existence. And yet he has interests to consider and rights to guard.

The tariff needs revision, and it is presumptive evidence that the Government thinks so, too, or it would not be holding the present investigation. But while the work is being done it might as well be done well. And the only way it can be done well is to first consider and carefully weigh the interests of all concerned, and from the evidence thereby adduced, and the knowledge thereby attained, construct a tariff that will protect the interests of the merchant who imports and sells as well as those of the manufacturer who makes.

Boards of trade and mercantile organizations in general should give this matter their prompt attention.

A NEW TRADING STAMP PLAN.

PROMOTERS of trading stamp concerns are actively making preparations to continue their business after November 1st, when the Dominion Legislation providing for the discontinuance of the issue of stamps becomes effective. To effectually get around the clause which states stamps cannot be issued or redeemed by a third partv. a company operating under the name of the General Specialty Co., Limited, with the further title of Affiliated Stores Agency, 124 St. Peter street, Montreal, has issued an interesting prospectus to merchants and the public, which they declare to be perfectly legal.

Montreal, the mecca of trading stamps, is the only centre operated in at present, but it is intended, according to H. E. T. Cook, the manager, that the system be extended throughout the principal centres of Canada. The plan is practically the old system, with the exception that the merchant redeems the stamps himself in order to keep within the letter of the law. The stamps are issued by the agency, with the imprint of each interested retailer thereon, a deposit being required as a guarantee of good faith. The company exacts a commission for its services in furnishing the stamps and doing the advertising. The stamps, redeemable by the merchant, are each worth one-half cent in goods, and one-third of a cent in cash. The co-operation and active interest of the retailer is sought by giving him a share of all profits, in fact four-fifths.

The advantage of this method over the merchant giving his own premiums is not entirely obvious, although the sponsors of the system claim their proposition has been well received. With the exception that stamps of different merchants can be made interchangeable, there is no additional advantage to the collector.

The Traders' Advertising Co., the oldest and largest of the Montreal stamp concerns, advises its patrons credit on all cash receipts returned to them will be given in a "savings coupon account," at the rate of one-half cent. for every cash receipt. This coupon account is to be extended indefinitely after the 1st of November, and they will accept the stamps of certain merchants at the rate of 5 per cent. on the face value of the coupons. Their method is to save the collector any trouble until $10 has been placed to the credit of the collector. Then three options are obtainable—$5 in cash, $8 in goods, or $10 in the Ideal Savings Company.

FREIGHT AND INCIDENTAL CHARGES.

FROM time to time difficulties arise between the retail hardwareman and his jobber as to the exact meaning of those mystic letters, f.o.b. The ordinary conception is that when goods are quoted f.o.b. Montreal or Toronto, the jobber or manufacturer agrees to deliver the goods to the railway people, when his responsibility ceases. But practically none of these firms have wagons under their own management which deliver freight at the receiving sheds of the railway companies. Instead, the drays of the transportation companies call at the respective warehouses to accept freight, and the responsibility of the railway company begins as soon as the goods are placed on the dray. Thus it often happens that consignees are asked to pay cartage, in addition to their freight charges, and even when not definitely stated it is generally included in the bill for freight.

Another peculiar incidental charge is sometimes made on shipments which are sold from export without having been received into stock. It is known as "back charge," or, as it is sometimes called, "advance." When traced to its head, this "advance" charge is generally found to be for some such incident as wharfage.

But, as one of our readers asks, why should the retailer be compelled to pay this "cartage" and "advance" when he buys his goods on the understanding that they will be delivered "free on board" the train or boat, at the consignor's station? He himself in selling his goods cannot exact charges for packing and delivery, and he naturally thinks that, by the time he has paid the jobber a reasonable indemnity for "packing," and the railway company for "freight," he should be exempt from such further incidentals as "cartage" and "advance."

But this is a matter which will have to be settled by an understanding between the two interests involved, and the individual retailer would have a small chance. What better agency could be employed than a thoroughly energetic Retail Hardware Association, such as exists in the Northwest Provinces and in nearly all the States of the American Union? This is something which Hardware and Metal has long advocated, and the time is ripe for a move in that direction.

Advertise weather strip and storm doors now.

Chafing dishes will soon be in demand. Carry a nice line of hollow ware and it will pay.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 3.

FROM office boy to general manager of a firm's business is a big jump but it has been made by many and articles often appear drawing attention to the marvelous advances made by men who have served their employers faithfully and well. Only a few days ago Mr. Chas. M. Hayes, general manager of the Grand Trunk Railway, told of how he had risen from the position of messenger boy to the one he now holds, stating that the company does everything it can to encourage such advances.

While there have been many who have made the leap spoken of, there are few who have done it so quickly as the subject of this sketch, Mr. R. J. Cluff,

Mr. R. J. Cluff, Senior Member of the Firm of R. J. Cluff & Co., Toronto.

head of the recently established firm of R. J. Cluff & Company, Toronto. Mr. Cluff is the youngest supply man in the Central Supply Association, having been born in 1875, only thirty years ago. Seventeen years ago he took a position as office boy with the Dominion Radiator Company and through hard and conscientious work won his way upward until he occupied the position of assistant manager, which position he resigned in May last to become head of the company organized by himself. While with the Dominion Radiator Co. Mr. Cluff spent several years on the road acting as their traveler through Ontario, and making occasional trips to Manitoba and the Northwest Territories, he being very well known to the trade everywhere between Montreal and Edmonton.

Associated with him in the firm of R. J. Cluff & Company is Mr. W. J. Cluff, who was also formerly with the Dominion Radiator Company, acting as their traveling representative in Eastern Ontario. Other influential business men are also interested in the enterprise, the firm acting as Ontario selling agents for Warden King & Son, Montreal, manufacturers of the popular Daisy Hot Water Boilers. They also carry in stock iron pipe, cast and malleable fittings, brass goods and everything to complete hot water or steam heating systems. Although head of the firm Mr. Cluff still makes occasional trips on the road.

Since the establishment of the company last May the business has grown to such an extent that the present premises at 50-52 Lombard street, Toronto, are now too small to handle the volume of trade and plans are being prepared for a new building which is to be erected on a central site. The firm's business has been away beyond expectation and although the offices have been enlarged and the staff doubled the rush of business has prevented the getting in touch with all the trade and it is the intention to put a larger staff on the road next year.

Although not prominent in athletics of any kind Mr. Cluff is always present at any social feature in connection with the plumbing and heating trade, he recognizing the great value of encouraging the social element in the organizations of the trade. Although few of our readers will recognize a similarity between the likenesses of Mr. Cluff and Mr. Fred Somerville, general manager of the Ontario Lead & Wire Co., these two gentlemen are often taken for each other and some amusing situations result in consequence. At the recent Toronto Exhibition one of Mr. Somerville's many lady friends addressed Mr. Cluff as Mr. Somerville and explanations were in order. Likewise Mr. Cluff is often spoken to regarding lead pipe and other supplies, while Mr. Somerville gets inquiries for heating goods which are intended for Mr. Cluff.

PREPARE FOR TARIFF COMMISSION.

THE Tariff Commissioners have now completed their labors on the coast, and are on their way east to hear representations from that part of the country bearing on a tariff revision.

It is pretty well understood that an effort will be made by the officials of the proposed tin plate concern in Morrisburg to have a protective duty put on tin plates, Canada plates and black sheets.

If, then, it is the desire of the Canadian manufacturers using these raw materials to meet the Tariff Commission when they convene in Toronto or Montreal it behooves them to get together and arrange their delegations.

PERSONAL MENTION

Quebec.

E. Crowe, of South Maitland, visited Montreal recently.

L. E. Venne, hardware dealer, Hochelaga, is enlarging his store.

J. A. Paquin, general merchant, of St. Eustace, was in Montreal during the week.

G. C. Poulin, wholesale lumber dealer, of St. Johns, Que., visited Montreal this week.

Geo. Beauchemin, of Beauchemin & Co., machinists, Sorel, was in Montreal on business this week.

Mr. Beaulieu, manager of the Pontbriand Co., Limited, saw makers, Sorel, was in Montreal recently.

Mrs. Gates, of Waterloo, Que., called on the Montreal jobbers this week, placing orders for Fall goods.

J. E. Terriault, of the Joliette Foundry Co., Joliette, Que., was reported in Montreal a few days ago.

E. Brosseau, hardware merchant, of St. Sauveur des Montagnes, visited Montreal jobbers this week.

John Black, general merchant, of Scotstown, called on Montreal wholesale hardware firms during the week.

J. B. Limoges, general merchant, of Ste. Anne de Plaines, called on the hardware jobbers in Montreal a few days ago.

T. W. Boyd, of the firm of T. W. Boyd & Son, dealers in sporting goods, Montreal, is in New York on a business trip.

W. E. Ramsay, manager of the Pedlar People's Montreal branch, spent last week in New York on his annual vacation.

R. G. How, Canadian representative of the Wilkinson Sword Co., with headquarters in Montreal, spent last week in Halifax.

C. L. Devitt, who represents Lewis Bros., Limited, in the territory adjoining the Gatineau, spent the week end at headquarters.

Messrs. Tindall and E. G. E. Ffolkes, of the Wilkinson Plough Co., Toronto Junction and West Lorne, were in Montreal this week.

Jean Roud, proprietor of the saw and grist mill and electric lighting plant at St. Therese, visited the supply houses in Montreal this week.

Mr. Haskill, of the Haskill Lumber Company, Fasette, Que., called on the wholesale hardware trade in Montreal this week, ordering supplies.

E. Monbleau, steamfitter and machinist, St. Johns, Que., visited the Royal City this week on business with the supply houses of that place.

Howard Pillow, of Caverhill, Learmont & Co.'s Montreal staff, has returned from a trip through Great Britain, France and the continent.

Geo. Miller, representing the Brantford Screw Co., Limited, Brantford, was a visitor in the offices of Hardware and Metal while in Montreal on business last Monday.

E. F. Price, of the office staff of Frothingham & Workman, Limited, Montreal, is confined to his home with an illness which threatens to develop into typhoid fever.

L. N. and J. E. Noisseux have just completed a very handsome store at 2157 Notre Dame street, Montreal, where they will establish another branch of their hardware business.

G. A. Decatur, of Decatur, Bull & Co., hardware importers and manufacturers' agents, Montreal, is at present enjoying a trip to Europe, and it is expected that he will not return until December.

Frothingham & Workman, Limited, Montreal, are hard at work on their new catalogue, which will be issued about the first of the year. It will be a very comprehensive volume bound in the loose-leaf system.

Ontario.

Adam Taylor, Guelph, has been spending the past week in Toronto.

G. Allan, hardware merchant, Burlington, was a visitor in Toronto this week.

The Toronto Hardware Co. suffered a small loss by fire at their works on Dufferin street a few days ago.

Major J. A. Currie, president and manager of the Imperial Steel & Wire Co., of Collingwood, visited Pittsburg last week.

The Batty Hardware Co., Norwich, have been making considerable improvements and doing some very fine window dressing recently.

Joseph Akitt, hardware merchant, Creemore, has moved into a new store building constructed of cement blocks. The store front has a most imposing appearance.

D. & H. Becker, New Hamburg, have been showing some exceptionally fine display windows recently, and Hardware and Metal hopes to be able to present illustrations of some of them at an early date.

Mr. J. T. Peacock, who has for several years been connected with the office work of the James Morrison Brass Mfg. Co., Toronto, has joined the Toronto staff of the Canadian Fairbanks Co., Limited, Toronto.

Mr. Robert Hobson, general manager of the Hamilton Steel & Iron Co., was a visitor in Toronto this week in connection with the meeting between the British Columbia jobbers and the Canadian Manufacturers' Association.

Mr. F. W. Reynolds, Bethany, has taken over the hardware stock of the general store of his father, Charles Reynolds, and has moved into a new store which has been fitted up with a splendid arrangement of modern fixtures.

Mr. Converse, who has been connected with the Consumers Cordage Company in Montreal as secretary-treasurer, has been in Toronto this week making preparations for the taking up of the same line of business on his own account shortly.

A. L. Schultz, of Pittsburg, the engineer in charge of the construction of the big bridge plant being established in Buffalo in connection with the Lackawanna Steel Co., spent several days last week in Canada examining the field as a prospective market for the product.

Senator Fulford, of Brockville, whose sad death resulted from an automobile accident in Boston recently, was buried in Brockville this week. The deceased senator was a director in the Jas. Smart Mfg. Co., Brockville, and the Frost & Wood Implement Works, Smith's Falls.

Miss Banfield, who has been a trusted employee of H. S. Howland, Sons & Co. for several years, is leaving her position on account of poor health. Last Saturday her fellow employes gathered around her and presented her with a beautiful silver toilet set, handbag and pair of opera glasses as a token of their friendship.

Mr. Fred. A. Riley, representing the Regal Glove & Mitt Co., London, was a caller on Hardware and Metal's Toronto office last Saturday. Mr. Riley states that since his firm began the manufacture of gloves, mitts, aprons and other canvass specialties a few months abo, a large trade has been built up, and the hardware merchants are doing a good business with mechanics, farmers, etc., who use these goods in their work.

Cameron & Cameron, hardware merchants, Beaverton, have been refitting their store with modern fixtures and showcases, and have also made considerable extension in installing a new front and doing considerable painting. This firm is very enterprising and are doing a large coal business at present, amounting to over two cars per week. They find this to be an exceptionally good side line when run in connection with their cement warehouse.

Western Canada.

A. H. Meakin has purchased the hardware business of D. Taylor & Co., Nananimo, B. C.

John Drew, manager of the J. H. Ashdown Co.'s business at Nelson, B.C., is shortly to be removed to Calgary. Mr. Hamilton Byers succeeds Mr. Drew in the management of the Nelson branch. While in Nelson Mr. Drew took a prominent part in the work of the board of trade and wholesalers' association.

Maritime Provinces.

The Dominion Tar & Chemical Co., with works at Sydney, N.S., have opened a branch office in the Board of Trade Building, Montreal. They have had an agency for this district since the early part of the year, but in view of increasing business, and with a desire to be in closer touch with their Montreal clients, they have decided upon the branch office, which will be under the management of Mr. F. N. Seddall, who has hitherto acted as their agent here.

A Halifax despatch says that the report that Mr. Graham Fraser is to return to the Nova Scotia Steel Co. is persistent. Mr. Fraser has been in Halifax recently, and had a conference with Mr. R. E. Harris, president of the Nova Scotia company. The report comes from Sydney that a steel expert from Illinois named Macdonald has been engaged as Mr. Fraser's successor with the Dominion Company. The name of Mr. A. J. Moxham, formerly general manager of the Sydney Mines, is also being mentioned as a possible successor to Mr. Fraser.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Gilmore's Shovels are now quoted at $10 list.
Pig Lead shows another advance, current price being from $3.85 to $3.95.
Pig Iron has experienced a rise in several grades.
Carron, No. 1 is quoted at $21.
" **Special** is quoted at $20.
Ayresome, No. 1 is quoted at $20.
" **No. 3** is quoted at $19.40.
Clarence No. 1 is quoted at $19.
" **No. 3** is quoted at $18.50.
Antimony has declined slightly, and is now sold at 14¼c. to 14½c. for Cookson's.
Ingot Zinc has again advanced, current prices being 7c. to 7½c.
Linseed Oil prices are being shaded for large orders.
Turpentine is now selling at 98c. single barrels, and 97c. for two barrels and over.

TORONTO.

Iron Pipe and Fittings have been subject to an open market for several days.
White Lead has advanced from $5.40 to $5.55 reverting back to its former figures.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 20, 1905

LOCAL jobbers have been a little busier this week as orders for Fall trade are increasing right along. Even at that, however, Fall goods are not moving as they should owing to the long continued spell of fine weather which Eastern Canada has been experiencing. Such articles as stove pipes and stoves are not selling in their accustomed volume for this time of year, but indications are that a cold snap or the breaking up of the present weather will result in an abnormally large volume of business in these lines.

Among the goods which are moving with particular rapidity just now may be mentioned skates, horse blankets, sleigh bells, and hockey sticks. Cutlery is also going out well and will continue to do so until Christmas. In this connection it is remarked that the better grades are in much more active demand than usual especially in the west.

Changes which have taken place in the price list during the past week are of no moment except in shovels, Gilmore shovels being now listed at $10. Horse shoes and horse nails are wonderfully active, good orders being received from all parts of the country. The staple hardware articles are being asked for in the same remarkable manner which has characterized this trade for several months past.

Axes—The normal activity is manifest, all the local houses reporting a splendid trade for their various patterns. We are quoting prices as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—The demand is first class, showing no abatement. We quote: Axe handles No. 3, $1.25 [illegible] No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—With the advance of the season sewing machines are coming rapidly to the fore in the hardware markets. We give prices as follows: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—A good volume of business is reported, mostly, however, in repeat orders. We quote: Cold blast, $4.50: No. 0, Safety, $5.00.

Rivets and Burrs—This line maintains the wonderful activity that it has shown throughout the year. Our prices are: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Good sales are reported by all the dealers at unchanged prices. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Trade is featureless, but continues good. We quote: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Horse Nails—This is naturally one of the most desirable lines at this season. All dealers are making big sales. Our quotations are as follows: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—Prices have not yet advanced, though there is a feeling among the trade that this cannot be long delayed. We are still quoting: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—The demand is only fair with the price remaining at $2.20 per keg, f.o.b. Montreal.

Horse Shoes—These goods share the activity of horse nails. The market is decidedly strong. We quote: P. B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern. No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—The large volume of business which has been done throughout the Fall is still being maintained to a considerable extent. Ammunition is the strong feature. We quote: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.: American centre-fire cartridges, list net: sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—No contracts of unusual interest have been booked during the past week, but business is satisfactory. All parts of the country are scenes of much building activity with the result that orders for building paper are keeping well up to the mark. Prices remain unchanged and are still as quoted in our current market quotations.

Cordage—The steadiness of prices in these lines for the past year has created a record, as there is generally considerable fluctuation. Prices are unchanged this week.

Cement and Firebrick — The same conditions hold good this week as were noticed in our last issue. Jobbing orders continue to be the order of the day and there are no very large contracts in sight. We quote the followingem in sight. We quote as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags: $2.05 in barrels in round lots.

Coil Chain— We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—There has been no awakening as yet in this trade which is considered slow for the season. Our quotations are as follows: Little Star, $4.85; Hudson, $5.00; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Sales are rapidly increasing and prospects are bright for a record season. Prices remain from 25c. to $2.50, according to quality.

Sleigh Bells—Movement in this line is getting stronger daily. We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft

gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—Inquiries are coming in very nicely. The largest local interest reports that this season there will be a great improvement even upon last. Prices range from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Oct. 20, 1905.

RIFLES are beginning to boom owing to the demand for deer shooting. The call for ammunition and shells is also very active. Cutlery is also being ordered in fair quantity and a demand is expected to continue brisk for some weeks yet. Skates and sleigh bells are being shipped in large quantities, orders having been booked for these goods some months ago. Orders for next summer's trade in lawn mowers are being taken by the travelers, but prices are unsteady as manufacturers have been unable to agree upon new lists as yet. Business on the whole is reported to be very good, but very few out of town buyers have been in the city during the week. Trade is taking a turn for the good and a boom is looked for in a week or two.

Sporting Goods—Rifles are increasing in demand, owing to the call for deer shooting.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chains and other Fall lines are selling well. 1-4 inch, $6.50; 5-6 inch, $4.45 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Ladders are being called for actively and more than the average Fall trade is being done. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Barb and Coiled Spring Wire—Trade is falling off, the bulk of the season's business having been done. No change in quotations.

Wire Nails—Demand continues very keen, but quotations remain the same. While cost of materials is advancing there is no talk of a rise as yet.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Axes—Blades and handles are being bought largely and a most satisfactory winter trade is looked for.

Horseshoes—Prices continue unchanged with the outlook for business excellent. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—Blacksmiths are ordering in large quantities and dealers have no complaints to make.

Cutlery—Case goods and carvers have been the favorite lines. Some dealers are still sending in sorting orders.

Skates and Sleigh Bells— Merchants are ordering well, particularly for sleigh bells.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—The possibility of higher prices is giving an impetus to trade. Prices remain as before.

Bolts and Nuts— An increase is looked for by some on account of the advancing prices for iron. Mills have plenty of business.

Cordage—Sorting orders are being received. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton. 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—A scarcity exists owing to the heavy demands of the past season, and prices are very firm in consequence. We quote: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick— Demand is increasing. Quotations are firm, but prices unchanged. We quote as follows: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Business is active, the heavy building being done calling for a large quantity of goods. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool—The conditions remain unchanged, demand is active, arrivals about equal, with prices too high to effect profitable business.

Hides, inspected, No. 1 per lb.	0 12	
" " " 2 "	0 11	
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected		0 14

" " extra "	0 24	0 25

Order your sleds and display them on the sidewalk the first day there is a snowstorm.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, October 20, 1905.

REPORTS from the west state that iron pipe and fittings are being slaughtered there, but local dealers cannot understand such a situation at the present time. Iron and steel are higher in price and firmer now than they have been for months, and certainly the situation is not such as would justify an open market and cut prices. In the east there is a decided scarcity in iron pipe and a general advance in all heavy goods is contemplated. The big firms have withdrawn prices on boiler plates and no concessions are now obtainable on contracts already booked.

Copper remains unchanged with no immediate prospect of a deterioration in value. Tin is also firming up again, though prices have not been advanced by the jobbers. Antimony again shows a slight easing off during the week, but as stocks in this country are small there is little difference in current quotations.

Galvanized sheets have been advanced four times recently to importers with the result that the jobbers have been forced to withdraw their prices. They are now busy making out new lists which will be sent out probably to-morrow. All the thicker guages are being advanced. Canada plates both in galvanized and polished are subject to these conditions also, and black sheets too, which have been raised 10c. to importers, will be advanced before the end of this week.

Pig lead is firmly held at 5c. advance on last week's quotations. Its strength at this price will be realized from the statement that the advance on imports has been much greater in proportion. Far from having reached the top price it is believed that lead is destined to break more records before attaining the end of its upward career. It is hard to understand this condition, especially since the close of the war as everyone expected a slump when that event occurred. It has been shown, however, that, while there was a falling off in demand from the belligerent nations, other circumstances cropped up to make up for this deficiency. Further more it is thought that both Russia and Japan are now replenishing stocks which would mean but little falling off in the demands from those quarters. The increase in trade of the east, too, must be the cause of considerable more lead being consumed, especially for tea lead, as both Japan and China are now shipping many times the quantity of tea that they did during the war.

Another revival has occurred in the Scotch pig iron market this week and it has been shown that the American buying movement is by no means over. The reported purchase of 50,000 tons of Scotch or North of England pig iron by an American firm is one incident which will tend to prove this assertion. Some of the Old Country furnaces are booked up for months ahead, and it is

impossible at the present time to place contracts for their products.

Canada Plates—This is among the products booked for an immediate advance. In the meantime we quote: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—Conditions remain the same as at our last report, and prices still are as follows: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—This metal is again firming up and while the advances have not been such as to warrant an increase in the jobbers' prices, it is more than probable that higher figures will be reached before long. We are quoting: 36c. to 36 1-2c. per pound.

Pig Lead—Although this metal had reached a remarkably high price last week its upward tendency has been continued until another advance has been declared. Our revised prices are: $3.85 to $3.95 per hundred pounds.

Boiler Tubes — We quote prices as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c., 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, per foot net.

Pig Iron—Another remarkable buying movement has been manifest in the old country this week with the result that some of the Scotch furnaces have sold out their entire output for months ahead. We are quoting this week many advanced prices, as follows:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.

Clarence No. 1	19 00	"	"
" No. 3	18.50	"	"
No. 1, Cleveland	17.50	"	"

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—The advances quoted last week have held firm and current prices are as follows: Sleigh shoes, $1.97 1-2, tire, $2.12 1-2; spring, $2.75; toecalk, $2.67 1-2; machinery iron finish, $2.07 1-2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The series of rises which have been encountered by the importers has at length compelled the jobbers to amend their lists. Although the new prices have not yet been made public it is certain that higher figures will be demanded next week, especially in

FOR SALE.

A ONE THIRD interest in the hardware and implement business of George Stephens & Co., Chatham, Ont. For particulars, apply to D. H. Douglas, Chatham, Ont. [43]

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Port Burwell Breakwater," will be received at this office until Friday, November 3, 1905, inclusively, for the construction of Breakwater at Port Burwell, in the County of Elgin, Ontario, according to a plan and specification to be seen at the office of the Resident Engineer, Confederation Life Building, Toronto, at the office of the Resident Engineer, London, Ont., on application to the Postmaster at Port Burwell, Ont., and at the Department of Public Works, Ottawa.

Tenders will not be considered unless made on the printed form supplied, and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for seven thousand dollars ($7,000.00), must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,

FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, October 3, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (42)

who are open for a situation are requested to register their names with the MacLean Publishing Co., at any of their offices. Inquiries are occasionally made by manufacturers and wholesale houses who contemplate establishing their own advertising department.

the heavier gauges. We quote: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15 to $4.40; "Windmill Best," 28 gauge, $3.95; Sword and Torch 28 gauge $4.05; in less than case lots 25c. extra.

Black Sheets—This line is also certain to be advanced when the new lists are made public. During the present week importers have had to face a further advance of 10c. We are quoting: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—A slight weakening in the market has caused a falling off of half a cent but as Canadian stocks are very light no decided dominant movement is expected for some time. We are quoting: 14 1-4c. to 14 1-2c. for Cookson's.

Tin Plates—These have just been advanced on the other side and it will not be long before jobbers will be compelled to follow suit. Our prices are still, however, Cokes, $3.75; charcoal, $4.00.

Ingot Zinc—Hardware and Metal predicted last week that higher prices would be commanded by spelters very shortly and this has come true during the week. Our new prices are: 7c. to 7 1-2c.

Bar Iron—No change has taken place during the past week, ruling prices still being: $1.87 1-2 base, f.o.b., Montreal.

Scrap Metal—Conditions in iron are the same as last reported. It is said that there is no large collection of wrought scrap in the hands of local dealers and as cast iron has been looking closer, stocks seem light in that too. Copper remains at the same price.

The Boston papers are quoting very little higher than local dealers for scrap rubber, but indications are that as soon as the manufacturers come into the market we will see much higher prices. At the present time there are little or no stocks on hand. All prices this week are the same as last, and are as follows: Copper wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 1-2c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 6 1-2c. to 6 3-4c.

FOR SALE.

ONE No 3 Warrington Steel Pile Driver, length, 8 feet; diameter of cylinder, 8 inches; normal stroke, 30 inches; weight of striking parts, 1 800 lbs; total weight, 3 800 lbs; distance between jaws, 18 inches; width of jaws, 6¼ inches; fitted with patent end base; interchangeable; complete with all fittings and steam hose. This hammer has been used but two weeks by a private concern (to hustle work delayed by contractor) which has no further use for it. It is practically as good as new. Box 285 HARDWARE AND METAL Toronto. [42]

VALUABLE Canadian patent for a very useful pocket tool; cost one cent to manufacture; retails for 10c.; half a million sold in the States. For particulars or interview address Perry, Box 397 Norwich, Conn. [45]

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 20, 1905.

EVERYTHING is reported steady in the metal lines, the general situation being considered very good. All metals are very firm in price except antimony, which is, however, about holding its own. Pig lead is particularly strong. New lists on Canada plates and galvanized sheets are expected next week, an advance having been made in the United States.

Pig Iron—Prices are strong and the volume of business being done is large. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 00
Londonderry, at furnace	16 50 to 17 00

Bar Iron—The market is active and prices firm. We quote as follows: $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—Market is active and demand very keen. Quotations have fluctuated, but are now steadier.

Tin Plates—Demand is active with considerable strength shown in prices.

Galvanized Sheets—Trade is very active and higher quotations are looked for.

Brass—Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Stocks continue light and buying heavy at unchanged quotations. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Demand is more active, and prices firm. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Business being done is quite large, no falling off in the demand being reported. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Prices are firm, but not much business is being done.

Old Material—Copper is very strong, but lead is not so much in demand. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9c. $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $7.50 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 1-4c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Possibility of a strike in both the anthracite and soft coal fields is making business active. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch,

$1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, October 19, 1905.

THE leading interests in the steel industry are more and more emphatically taking a position adverse to any violent upward price movement. They are endeavoring not alone to keep values of raw material within bounds, but are holding down prices on finished iron and steel. This is shown by the character of the buying of pig iron on the one hand, and by the success in keeping the official price of plates at the old figure.

The markets for pig iron have stiffened. This week it is the east and the central west which have marked up quotations. Some of the large southern interests have practically withdrawn from the market entirely, but there is still some, though little, iron available on the basis of $12.50 for No. 2 at Birmingham.

In the central west the news of greatest interest is that the steel corporation has purchased 20,000 tons of iron for October delivery at $15,50, at furnace, and 20,000 tons for November delivery at $16, thus establishing an advance. The quantities purchased, however, are smaller than expected.

There has been further good buying in the eastern markets and prices have been advanced to $16.50 to $16.75, at furnace, for No. 2 foundry, and $17.50 to $17.75, delivered, for basic pig. A leading Buffalo interest has to-day put up prices 50c. per ton.

The reaffirming of the official price of $23 for steel billets by the makers interest nobody, since the "official price" has long since been inoperative. What transactions have taken place during the last few months have been at considerably higher figures. In the eastern markets very considerable quantities of open hearth steel have been selling lately at $28.

A number of moderate sized lots of steel rails have been contracted for during the last week. It is understood that thus far the New York Central Co. has allotted about 125,000 tons of its requirements and that the Baltimore & Ohio Co. is in the market for 71,000 tons.

The pressure upon the car builders and locomotive shops is enormous. It is figured out that there are contracts in sight for 80,000 steel cars, which include the 20,000 cars just being figured on for the Pennsylvania system. The locomotive builders are crowded and are covering liberally for their materials. One large interest has contracted for a total of 75,000 tons of bars, plates, etc.

Reports from the lighter lines are very encouraging. Even in the tin plate trade orders and specifications are on a more satisfactory scale.

Why not convince your friends who intend to build of the advantages of "Empire" Metallic Shingles over wood shingles?

Many have been so convinced by other dealers, and a good trade created by just keeping alert to local building operations and getting out after the trade. It requires but slight effort to prove to anybody that wood shingles are things of the past and once the point is made clear the profit and trade are yours instead of your business rivals'.

"Empire" Metallic Shingles are fireproof, stormproof and never rust. Their capacity for wear is wonderful and dealers who will but take the trouble to push their sale are assured of goodly profits.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto ***Winnipeg***

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts.
"Metallic" Siding (stone, brick, etc.)
"Metallic" Crestings and Finials
"Impervia" Fireproof Windows
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

407

LONDON METAL MARKETS.

From Metal Market Report, October 18, 1905.

Pig Iron—Cleveland warrants are quoted at 54s. and Glasgow standard warrants at 52s. 4d, making prices as compared with last week 1s. 3d higher for Cleveland warrants and 1s. 4d higher for standard warrants.

Tin—Spot tin opened firm at £149 2s. 6d, futures at £148 10s., and after sales of 200 tons of spot and 180 tons of futures closed easy at £148 17s. 6d for spot and £148 5s. for futures, making price as compared with last week £1 15s. higher on spot and £2 higher on futures.

Copper—Spot copper opened firm at £72 12s. 6d, futures £71 2s. 6d, and after sales of 400 tons of spot and 600 tons of futures closed easy at £72 10s. for spot and £71 for futures, making price as compared with last week £1 higher on spot and 15s. higher on futures.

Lead—The market closed at £14 18s. 9d, making price as compared with last week 6s. 3d higher.

Spelter—The market closed at £28 12s. 6d, making price as compared with last week 12s. 6d higher.

REVISED FREIGHT RATES.

MONTREAL and Toronto merchants are bound to gain a big advantage over Vancouver merchants by the big reduction made in the through C.P.R. freight rates from Montreal and Toronto to Edmonton. The reduction is an unusually large one, amounting in some cases to as much as forty cents per hundred pounds. This is on first class freight matter, and the reduction is slightly smaller on the lower classes.

The officials of the C.P.R. when seen stated that no reduction had been made or was contemplated in the rates from Vancouver.

It looks as though it were a fight between communities. Montreal merchants have claimed that they have been discriminated against for a number of years and are therefore entitled to the reduction made.

R. Kelly, a prominent wholesale merchant and heavy shipper in Vancouver, when shown the despatch said, "It means putting us out of business." Other dealers re-echoed this statement, and the whole business section of Vancouver has been thrown into a ferment. Students of the transportation question state that this latest modification of freight rates in favor of Montreal signifies the opposition of the C.P.R. to the China Mutual Line and other steamers bringing European goods into Vancouver for distribution through Canada and the desire of the railway company to force transportation of all these goods through Montreal. Vancouver shippers complain that the C.P.R. has always treated Vancouver as if the line had only one terminal, and that one was Montreal. They suggest that the proper course for the railway to pursue would be to treat both as terminals and give an equal and fair distributing rate along its lines from both points.

SEASONABLE GOSSIP.

Put some of this year's profits into a section or two of modern shelving. It will pay dividends.

Sheffield cutlery manufacturers are introducing ingenious mechanical processes in order to reduce costs sufficiently to meet German competition.

One of the first things a man entering business should learn is the art of successful advertising. If he does that, and has fairly good business sense, there is not so much of a problem as to his future. Nearly every successful business man is a smart advertiser, and nearly every failure was not. That's the difference.

WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Oct. 20, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

BUSINESS is very active in all lines of general hardware, particularly in heavy goods. There are no price changes to record this week, but a general revision of prices in several lines of hardware is expected to be made in a few days. Nails are steady at the decline noted last week. Collections are already improving as a result of the large amount of money being put in circulation as the crop is being marketed. The continuance of fine weather with a late closing of lake navigation would be a great boon to the trade.

Lanterns—Wholesale prices are steady and are quoted as follows:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—As noted last week, barb wire has been advanced 15c. per cwt. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized, 6 to 8	3 39
" 9 2 50	2 90
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire, 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire, 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—As noted last week, prices have declined to $2.60 per keg in Winnipeg. The price has been steady since the decline.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" tarred	80c

Ammunition, Etc.—Sorting orders are still coming in. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge	
black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—Price is now 21c. per lb.

Iron and Steel— Prices are quoted as follows:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb.	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 16 to 16 gauge, 100 lb.	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—There are rumors of an advance in some makes of galvanized sheets. Prices are firmly maintained at following prices:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 65 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 10 x 21, 10 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price is now $7.75 for cask lots and $8.25 for less than cask lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote

Black iron pipe, ⅛ inch	....
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 50
" 1¼ "	7 45
" 1½ "	8 95
" 2 "	12 30

Petroleum and Gasoline—Prices are still quoted as follows:

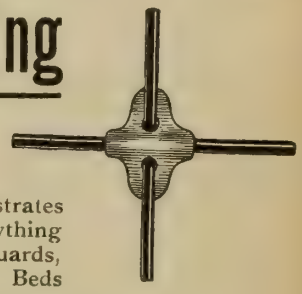
Silver Star, per gal	21c.
Sunlight "	22c.
Eocene "	24c.
Rennoline "	25c.
Crystal Spray "	24c.
Silver Light	22c.
Gasoline, 74 76	27c.
Gasoline, 72-72 (Engine)	25c.

(In barrels f.o.b. Winnipeg.)

Paints and Oils—Business continues brisk at unchanged prices. We quote:

Established 30 Years. Quality Tells.

We have seven factories producing daily 120,000 Files and Rasps, which are distributed throughout the four quarters of the Globe, and the excellent reputation which our Files maintain is the result of many years experience, and the expenditure of a large amount of money in designing the most elaborate machinery and tools for producing our INCREMENT CUT FILES, in all sizes and shapes, for all purposes.



We manufacture several Brands at our Dominion Works, all of which are warranted for their excellent cutting quality.

Sold by all prominent hardware and mill supply merchants.

NICHOLSON FILE COMPANY

Dominion Works, PORT HOPE, ONT.

Railway and Farm Fencing

We are prepared to place Munro's Lock Wire Fence in the hands of Hardware Merchants.

No patent tools required to fasten lock. Cut illustrates another style of galvanized lock that is superior to anything on the market. Write us for prices on Window Guards, Counter Railing, Steel Ladders, all kinds of Spring Beds and Mattresses. Largest works in Canada West.

British Columbia Trade News

Vancouver, B.C., Oct. 12, 1905.

MANAGER STOCKETT, of the Western Fuel Co., operating the Nanaimo coal mines, made a formal application to the Tariff Commission at its Victoria session to have a duty of 2½ cents per gallon on fuel oil. He explained that already one good customer had abandoned coal for fuel oil, thereby losing for them a customer whose use of coal had been 1,500 to 2,000 tons per month. He was afraid others would follow. The only large consumer of fuel oil in British Columbia is the sugar refinery here, so it is presumed that this concern was referred to by Mr. Stockett. He estimated a ton of coal to equal 42 gallons of fuel oil, so that the annual consumption of oil by his lost customer would not be far from a million gallons, and the proposed 2½ cents per gallon would be a heavy tax.

* * *

Since the successful culmination of the efforts of the Deputy Minister of Labor, W. L. Mackenzie King, the work of reopening the Nanaimo coal mines has gone on successfully and more men are being put to work each day. It will naturally be some time before the whole number employed will equal that before the strike. The water has accumulated in the four months the pumps have been drawn, so that the unwatering alone will take a good deal of time, the pumps having to take care of the daily accumulation and reduce those of four months. It is thought that several hundreds of yards of the workings will have to be pumped out before they can be worked.

* * *

Varying estimates of the gold output of the northern camps are coming to hand as the season closes up. It is given out that the Yukon will yield from $3,500,000 to $4,000,000. The output of Atlin camp is set by competent authorities at a round million dollars which is considered a very good return. The Tanana district, which is not in the Canadian Yukon but across the line in Alaska, is estimated at $6,000,000 or $7,000,000, but this is thought to be rather high.

The most important question before the people of the Canadian Yukon is water, and the investigations of Engineer Thibaudeau on behalf of the Dominion Government are looked to bring some favorable results. The people are practically a unit in desiring that the Dominion Government undertake and carry out a comprehensive scheme which shall provide and insure a permanent supply of water for all parts of the district.

Briefly outlined, it is that the waters of the Klondike River shall be brought to the "Dome," an elevation whence all the principal gold-bearing creeks emanate, and below which all the hillside and bench claims are also located. It will take many miles of ditching and piping to do this and to distribute the water to the many claims and concessions along the hillsides and creeks, and it is argued that only the Government is in position to undertake this, and that only the Government should have control of such an important semi-public undertaking, to insure its continuance in the service of the public.

* * *

Smelter matters continue to interest mining men in various parts of the Province. Those established and running are busy, and others are in contemplation. The Dominion Copper Co., which intends to build a smelter in the Boundary district, has not yet decided on a location, though they are likely to choose a site near Grand Forks. They also wish to purchase mineral claims in the same vicinity.

The old Pilot Bay smelter on Kootenay Lake is to be re-opened, the Bank of Montreal having sold it to C. Fernau of the Canadian Metals Co., the same company which has a new zinc smelter nearly completed at Frank, Alberta. The Pilot Bay smelter will handle ores from that part of Kootenay Lake district adjacent, and as there are many mining claims in the Ainsworth division including some now owned by Mr. Fernau, there promises to be some activity in mining in that locality.

The coast smelters, both situated on Vancouver Island, are busy, and the Britannia smelter at Crofton may be enlarged, for if there is to be any accession of custom smelting with the increase of the Britannia output above 150 tons per day the present plant could not handle it all. Numerous coast mining properties, among them the Mount Sicker camp on Vancouver Island, the King Solomon, also on Vancouver Island, and the Van Anda mines on Texada are to be vigorously worked. For the former a concentrator is proposed, and with it the development of a water power for its operation.

* * *

Some conflict over the authority of the Department of Lands and Works in instructing seizures by its timber inspectors, of booms of logs at up-coast points has been roused by recent seizures. Already a test case is on, and the loggers say they can beat the Government on the question. The seizures were made on the strength of information the Government claimed to have, that the logs were intended for export though the timber clauses of the Land Act specially forbade such exportation.

A strong advance in price of logs is predicted by men interested in the trade. The recent increase on Puget Sound is pointed to as one straw and another is in the fact that $7.50 per thousand is now being paid for fir, and at that price logs are in demand, while a year ago they were a drug on the market at $6 to $6.50. Clear cedar logs of prime quality are selling at $10.50 per thousand.

An attempt to establish direct dealing between the mills and the lumber consumers of the Northwest was made this week by Mr. Wm. Hobson, of Grenfell, who arrived on the coast to buy lumber for his own use. Mr. Hobson thinks that the middlemen are a greater cause of high prices than even the railway rates. He says he wonders that the mills do not establish their own yards and wipe out the middlemen. As to the duty of $2 per thousand the millmen are asking for, he says the farmers are not bothering themselves so much about it as about the big profits of the middlemen. Rough lumber costs say $10 per thousand in British Columbia and the freight is say $5 per thousand. The ordinary price is not less than $22 in the Northwest, giving $7 per thousand profit to the middleman.

* * *

There are two familiar sections in the Canadian Manufacturers' Association, the east and the west, when it comes to considering the re-establishment of old "Rule No. 2," C.P.R. freight regulations. Following the appeal of the Canadian Manufacturers' Association, made on behalf of the eastern wholesale shippers, for a ruling that this regulation should be placed in the regulations, and the counter appeal of the wholesale trade here, the British Columbia Wholesale Hardware and Grocers' Associations have sent delegates east to interview the eastern portion of the Manufacturers' Association with a view to impressing the justice of their case upon them. "Rule No. 2" when it existed permitted eastern wholesalers to mix any freight at hand and ship it west in carload lots, which the western jobbers considered an unfair advantage and they united in an effort which was successful in having the rule removed. The eastern men have now invoked the Railway Commission, and the joint delegation now seeks to induce the Manufacturers' Association to withdraw this request, though British Columbia jobbers put up a strong fight against the restoration of the rule when the matter was brought up before the commission at the time it sat here. The delegates appointed to go east were Messrs. J. E. Elliott of McLennan, McFeely & Co., Limited, Vancouver; C. P. W. Schwengers, of E. G. Prior & Co., Limited, Victoria; John Burns, manufacturers' agent, Vancouver; W. G. Mackenzie, of Wood, Vallance & Leggett, Limited, Vancouver; J. A. Rickaby, of R. P. Rithet & Co., Victoria.

Nova Scotia Trade News

Halifax, N.S., Oct. 18, 1905.

THE hardware business continues very encouraging. Orders are coming in just as freely as noted in last report. Trade in Cape Breton is quite brisk, and the orders from that section are very substantial. Collections on the average are considered very good. Prices show little change. Metals, as before stated in this correspondence, are very firm. The dealers here who hold good stocks decline to quote prices with the existing conditions of the metal markets.

The mining trade at the present is brighter looking than it has been for some time, and the prospects are that there will be a general revival of the mining industry all over the Province. Hundreds of mechanics and miners are flocking into the settlement of Torbrook, in Annapolis county, where good deposits of iron ore have been located. It is proposed to develop the areas on a large scale, and hundreds of miners' cottages will be erected at once.

Reports from points throughout the Province show that the lakes and rivers

are exceedingly low, and with the scarcity of water lumbering operations are very greatly hampered. There has not been one hour's steady rain since the birth of the month of October, and the existing conditions are causing a little alarm in some parts. The lumber operators, however, are still placing good orders, and they will be prepared for business when rain comes to move the logs.

In competition with the firms in this city handling imported cement, the city works department has accepted the tender of the Sydney Cement Co. for a year's supply. Halifax some years uses 10,000 barrels of cement, and this year the quantity consumed will be heavy, as there is a lot of sewer construction going on. The acceptance of the tender will have to be ratified by the city council before it becomes effective.

Owing to the increase in business the firm of Walsh Bros., painters, glaziers and decorators, have become a joint stock company. The company has been incorporated, and the capital stock is $100,000. The company will carry on the business under the name of Walsh Bros., Limited. At a meeting of the company the following officers were elected: President, Capt. D. A. Scott; vice-president, F. D. McDonald; secretary, J. A. Walsh. T. J. Walsh has been appointed manager of the company, and he will devote all his time to the business.

The resident engineer of the Beaver Hat Gold Mining Co. has made a quarterly return to the Nova Scotia Mines Office, which shows 375 tons 15 cwt. quartz crushed, yielding over 280 oz. of gold. This is said to be a record for a five-stamp mill.

The Sydney Rail Co. has just completed its 25,000 ton order of rails for the Grand Trunk Railway, and on Monday it started to roll a similar order of rails for the Intercolonial. During the past ten days forty-one cars, containing the products of the steel company, were sent out over the I.C.R. for Western Canada.

A FENCING PROPOSITION.

The Munro Wire Works, Limited, of Winnipeg, are making the hardware trade of the west an offer whereby they may make money from the sale of fence wire, a staple which is usually sold at very near cost. Probably there are very few hardware stores selling barb wire or galvanized wire at a decent profit.

The above mentioned Winnipeg firm are now making the trade a money making offer. Their "Hercules" fence can be erected without the use of expensive tools. It consists of galvanized wire and a patent lock. By selling this patent lock with the wire, a substantial profit can be made and at the same time a serviceable fence can be sold at a very low cost. Particulars of this offer can be obtained by writing the Munro Wire Works, Limited, Winnipeg. There is money in the scheme.

Chopping bowls and knives, vegetable slicers and meat choppers are all in demand, while sausage grinders will soon be seasonable. How is your stock?

"MADE IN BERLIN" EXHIBITION

BUSINESS men have learned to expect exhibitions of various natures and purposes, either of general character such as the Toronto Industrial Exhibition, or of special purpose like the Pure Food Shows held annually in Montreal, Toronto, and other centres.

It has remained to Berlin, Ont., to institute (at least so far as Canada is concerned) an exhibition along lines most characteristic of the times, when protective sentiment is developing into a spirit of Provincial and even local loyalty.

This week in the large hockey rink of the town a "Made in Berlin" exhibition is being held. Not only is this exhibition designed to interest local buyers in the goods displayed, but each day brings many people from neighboring towns, attracted by single fares on the railway and a musical performance in the rink, as well as by the Exhibition itself.

Of the towns of Canada none probably could make a display of local manufactures which should be as large and diversified, as high in standard of design and workmanship and withal as interesting to the average person as the display being made by Berlin manufacturers this week. The more important manufactures of Berlin include: Furniture, leather, felt goods, shirts, collars and cuffs, sugar, rubber shoes, trunks and valises, pianos, suspenders, boilers and engines, furnaces, office furniture and interior fixtures, robes and clothing, woodworking machinery, gas and gasoline engines, clocks, gas and electric meters, aluminum goods, cigars, beer and automobiles.

As the hardwareman has to handle shoe and stove polishes, household oils, etc., the display of the Alpha Chemical Co. could not fail to arouse his interest. This firm has a large booth and on a table in the centre as well as attached to panels at the back they had a most comprehensive display of shoe and stove polishes, ammonia, borax, blues, chloride of lime, harness soaps, etc.

One result of a visit to this Exhibition would be added interest in the woodenware, brooms, etc., made in Berlin.

A. Hertel devoted a display to Klondyke refrigerators, washing machines, enclosed ash sifters, benches, clothes horses, etc.

The Berlin Woodenware Co. included in theirs such lines as extension and step ladders, rocking horses, clothes horses, benches, rolling pins, Indian clubs, etc.

A. T. Schiedel confined his display to brooms and whisks, making a nice showing in a small three-sided booth.

The Standard Broom & Brush Company made a fine showing in small brooms and whisks, their range of the latter line being particularly strong.

A display that could not fail to interest merchants was that of the Berlin Electric Co., who showed an automatic switch, designed to switch off electric lights at any hour desired, thus saving light bills when service is given by meter.

The exhibitors have reason for congratulating themselves not merely on the success of this exhibit but also on the production of goods of such quality and attractiveness.

A display that could not fail to interest hardwaremen was that of the Berlin Aluminum Works. Here one could see all the familiar kitchen utensils, pots, pans, saucers, cups, etc., fashioned from the clean, light, attractive aluminum. This display was one that seemed to attract the interest of housewives generally.

Nearby was the exhibit of I. E. Shantz & Co., consisting of "Howard" Hot Water Boilers in three sizes, so arranged as to give the visitor an idea of their interior as well as of their exterior; also a pipe-cutting machine for plumbers and machinists, a comparatively new line with this firm.

The Berlin Racycle Co.'s display included six different styles of bicycles, one with aluminum finish, the others in black and red enamel.

The exhibit of Philip Gies, which was comprised of "Economical" Hot Water Boilers, with parts shown separately, "Hymmen's" Down-draft Drums, "Anderson's" Force Pumps and "Braniff's" Patent Leach Casting Machine came in for much attention.

A simple yet interesting exhibit was that of the Berlin Glue Works. It consisted of four barrels of glue in light flakes and ranging in color from light amber to dark brown.

IT PAID

The Miller-Morse Hardware Co., of Winnipeg, inserted the following want ad. in HARDWARE AND METAL, October 7th issue:

HARDWARE CLERKS WANTED

SIX bright, active experienced hardware clerks wanted for a Winnipeg wholesale hardware house. None but thoroughly experienced wholesale clerks need apply. Address, stating experience, age, references and salary expected Box 73 HARDWARE AND METAL, 511 Union Bank, Winnipeg.

The paper does not arrive in Winnipeg till Monday, and on Monday morning they engaged a clerk who answered the advertisement. By Tuesday they had received several replies.

Have you a message you wish delivered?

Have you a business for sale?

Do you wish to secure a new clerk?

Do you want anything in which a Hardwareman or Plumber would be interested?

RATES—2c. per word, first insertion.
1c. " each subsequent insertion.

Messrs. Clisdale & French have purchased the hardware business conducted by Mr. R. E. Walker at Caledonia, and will take possession on November 1st. successful business there. Mr. Walker The stand is a particularly good one, and Mr. Walker, through his popularity, did much towards building up a new has been a subscriber to Hardware and Metal for upwards of ten years, being one of the papers oldest subscribers. In a letter to the publishers of Hardware and Metal he states that the paper has been one of his best friends, and has been a great help to him during his business career.

PAINT, OIL AND BRUSH TRADES

TWENTY-FIFTH ANNUAL CONVENTION.

AS announced in Hardware and Metal a few weeks ago, the Sherwin-Williams Co will hold their 25th annual convention in Montreal the week of October 29th. The convention will bring to the city some 250 salesmen and managers of the company.

The Windsor Hotel will be the headquarters for the convention, although the meetings will be held in the auditorium of the company's plant at Centre street.

Those in attendance at the convention will come from all parts of the United States and from the territories in foreign fields covered by this company's salesmen, as well as those traveling throughout Canada. A special train will bring a large part of those to Montreal, and this meeting promises to be the largest convention of the employes of a single concern ever held in Canada. The object of this gathering is to review the paint and varnish situation of the past year, and to discuss the outlook, plans and methods for conducting business the coming year.

This is the first time the convention has been held in Canada, and only the second time it has been held away from the home office at Cleveland. It is especially fitting that the convention be held in Montreal at this time, as it will celebrate the tenth anniversary of the consolidation of the Walter H. Cottingham Co. of Canada, with the Sherwin-Williams Co.

Mr. Walter H. Cottingham is the vice-president and general manager of the Sherwin-Williams Co. He was born in Canada, and although he now resides in Cleveland, is still a Canadian and deeply concerned in the great industrial growth here. Mr. Cottingham founded the Walter H. Cottingham Co. and when this concern was consolidated in 1895 with the Sherwin-Williams Co., he became managing director of the Canadian division of the company. In 1899 he was appointed general manager of the entire company, with headquarters at Cleveland, and a little later was also elected to fill the office of vice-president, on the death of Mr. E. P. Williams, one of the founders.

Mr. C. C. Ballantyne, the present manager of the Canadian division of the company, is president of the Canadain Manufacturers' Association, and prominently identified with the interests which are pushing Canadian manufacturers to the front.

If you expect to sell paints you must practice what you preach by having your store front bright and cheery.

SHERWIN-WILLIAMS EXPANSION.

A neat booklet has been sent Hardware and Metal by the Sherwin-Williams Co., Cleveland, announcing the opening of the company's new offices and branch warehouse at Cincinnati last month. The steady development of the Sherwin-Williams business is largely due to the enterprising methods adopted in the advertising and salesmanship departments of the business, the company's plan being to not merely sell high quality paints and varnishes to the dealer, but to help to move them from the dealer's shelves into the consumer's hands. In this they have been most successful and the opening of the Cincinnati branch is only another mile post in the company's progress.

BOUNTIES ON PETROLEUM.

About $340,000 was paid in bounties on coal oil produced in Canada during the last fiscal year. At the rate of 1-2c. per gallon this would represent a net output of some 2,250,000 gallons of crude petroleum. This output of Canadian wells is far short of the total consumption. In addition to the home production there was imported during the year about 22,000,000 gallons of coal oil, naphtha, gas oil and the like products of petroleum.

CANADIANS FOR PERSIA.

A party of five Canadians from the Petrolia oil district, left by the steamship Tunisian the other day for England on their way to Persia where they propose to develop the oil fields in that country. The men, whose names are Crawford, Kirby, McNaughton, McIntyre and Slack, are expert oil drillers and have obtained concessions from the Persian Government which will enable them to enter the field under specially favorable circumstances.

The thing in hand is the most important now. To-morrow will take care of to-morrow's tasks if to-day's are done to-day.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 20, 1905.

JUST after our going to press last week turpentine advanced to 98c., and remained steady at that figure. Later reports from the southern markets show that the top is about reached, the probability being that the extraordinary figure demanded has completely closed out the bull elements. Lower prices are hoped for, but so long as the stocks are in very strong hands we may be disappointed.

Linseed oil has been rather higher in the English markets, but that feeling has not been reflected in the local markets, where on the other hand a sagging off of 1c. is reported on orders for quantities.

An optimistic feeling seems to prevail on the white lead and color market, and the disposition which was shown two or three weeks ago to shade prices in white lead has been completely dissipated. Stocks from the old country are getting to a very low ebb, and future grindings will have to show the advance which is to be expected from the higher customs tariff. Buyers are quite safe to stock liberally in white lead, liquid paints and the allied branches.

Varnish shows a good steady demand and dry color sales are also much in evidence, the feature of the week being a remarkable call for vermillion and golden ochres.

Turpentine—The one cent advance reported in our last minute telegram last week holds steady this week, though there is a feeling current that the top of the market has been reached. We quote: Single barrel, 98c. per gallon. Two barrels or over 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Although English markets show greater activity at higher prices this week the local dealers have not been affected by this. We are quoting: Raw, one to four barrels, 45c.; five to nine barrels, 43c.; boiled, one to four barrels, 48c.; five to nine barrels, 46c., f.o.b. Montreal. Net 30 days.

Ground White Lead—We quote: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—The rise in spelter has affected all zinc products, but this commodity only shows a higher tone at unchanged prices. We quote: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc—(Ground in oil) — We give the following prices: 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—We give the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Our prices are still unchanged. Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—The market is very steady and the advanced price of two weeks ago has remained firm. We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—The market is decidedly firm owing to the recent advances in raw material. Our quotations still are: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Prices are still held at $1.20 to $1.40 per gallon.

Castor Oil—The situation is unchanged. The last arrivals for the season will come in during the next couple of weeks after which import prices will be higher on account of the winter rates. We quote 8 1-2c. to 9 1-2c., according to lots.

Refined Petroleum—Is well held at the advance made last week. We are now quoting: American water white, 16 1-2c. to 17c.; Canadian prime white, 14 1-2c.; 18 1-2c. ex warehouse.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, October 20, 1905.

HIGH prices on linseed oil and turpentine have had somewhat of a deterring effect on business in these lines, but on the whole the jobbers and manufacturers have nothing to complain of as the trade in other lines is more than great enough to make up for a slight falling off on the two articles mentioned. The business so far this year has been much greater than in any previous season, and trade continues to be quite brisk even up to the present time.

White lead is back to the old figures quoted by us. For some time the market was fairly steady at about $5.55,

THE CANADA PAINT COMPANY LT'D

but some days ago quotations fell to $5.40. They have now reverted back to $5.55 and as the demand is quite active prices are fairly firm. Dealers are buying in fairly large quantities and as it is practically certain that advances must be made in the course of the next month or two, it will be seen that they are quite safe in stocking up quite heavily in goods governed by the market in white lead. With the exception of the above change all of last week's quotations hold good at the present time.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c.; boiled, 50c.; 5 to 9 barrels, raw, 46c.; boiled, 49c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Much business is being done at the old figures, shipments by boat being very large. We quote: Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c; 18 1-2c. ex warehouse.

Crude Petroleum—Prices are very firm and further advances are likely. We quote: Pennsylvania, $1.36; Ohio, 92c.; Canadian, $1.32.

MONTREAL WINDOW GLASS.

No new developments are noted in the glass situation this week. Hopes are expressed that there will be more direct shipments by steam for this port before the season closes, and it is thought that at the present time there are two or three ships on the way with consignments of glass. There is no doubt, however, but that glass will be very scarce all winter and the price throughout the cold months will have to be determined by the dealer. Our quotations are unchanged being as follows: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50 seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do. $28.50.

PAINT AND THE WEATHER.

THE influence of temperature on the consistency of paint is not always sufficiently appreciated, either in the factory or the painter's shop, says an exchange. On the whole the manufacturer is less liable to deviate from the standard of composition on account of differences in the consistency of his raw materials caused by variations in temperature than the painter is when the latter thins his paints himself, because the manufacturer works to a definite formula and uses the same relative proposition of the various ingredients winter and summer. The painter, on the other hand, mixes his paints by judgment only, his sole criterion being the ease with which the material can be spread with a brush, and this necessarily implies that the proportion of the various thinners varies according to the temperature and other local conditions. What the manufacturers have to bear in mind, however, is that if they send out in winter a material compounded in a manner suitable for summer use, or vice versa, there is a strong inducement offered to the user to tamper with the material. This fact is well known to makers of enamels and enamel paints, and at least one well known firm of makers of a renowned specialty take the simple precaution of recommending their customers, should they find the enamel somewhat "stout," to stand the can in a pail of warm water before use. Simple advice surely and calculated to save time investigating painters' complaints.

GUESSES AT THE RIDDLE OF LIGHT

THE BUILDER'S GUESS

"Scores of men have never believed that it is **possible** to **totally remove darkness** from an interior in the daytime. They have **tried** various 'systems' with the **same** result—failure. Hence their incredulity. Had these very builders even partially studied the **basis** upon which light **can be drawn** from the sky, and diffused through a building, they would have **at once** recognized that

MAXIMUM LIGHT GLASS

is the **only system** working in **absolute conjunction** with natural law, aided by a **special** combination of lenses and prisms, and so the **only system** that **can succeed. Maximum Light Glass** pays for itself **in a year** on the saving of artificial illumination **alone.** No riddle about light when **any builder** can go to his hardwareman, **examine** the glass, get a quotation, and **have it put in.** That's just common **every day** business."

SOLE CANADIAN AGENTS

Glass Importers and Manufacturers.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

MEMBERS of the late Canada Machinery Co., whose plant at Point Edward was burned down recently, have made proposals to the town of Sarnia to re-establish the works as a permanent industry in Sarnia. The promoters propose to expend $25,000 in new buildings and to pay out $80,000 to $100,000 in wages annually, from 100 to 225 men being employed. They ask the town for a free site, a loan of $25,000 and exemption from taxation.

The Dominion Oilcloth Co. are to build a $10,000 factory at Montreal.

The new plant of the Dominion Iron & Steel Co. in Newfoundland has been completed.

The Sylvester Machinery Co., Belleville, are to erect a large warehouse for storage purposes.

Briquetted coke, the new fuel, is now being retailed in Montreal by the Light, Heat & Power Co. at $5.50 per ton.

The Improved Match Co. are to begin operations at once at Drummondville, Que., seventy-five men being employed.

The liabilities of the Canada Launch & Engine Works, recently placed in liquidation, are $17,400, and the assets nominally $28,739.

The Red Cedar Lumber Company's mills near Vancouver, recently destroyed by fire, are to be rebuilt and new machinery installed.

Windsor may be the manufacturing headquarters of the Canadian Fencing Co., a Michigan concern which makes a new style of wire fence.

Work has commenced on getting the Simpson mill at St. Catharines ready for the machinery for engine works which are to be established there.

The annual statement of Granby Consolidated shows a surplus of $712,649 for the year 1905. The amount expended for improvements was over $485,000.

A site has been purchased on Van Horn street, Toronto, by W. H. Hutchinson, and it is understood that a factory for a new industry is to be erected.

Coal operators in British Columbia are urging the Tariff Commission to impose a duty on petroleum, which is largely used for fuel on the Pacific coast.

The Hamilton Bridge Company have received contracts from the Provincial Department of Works for two bridges over the Mattawa River, the cost to be $8,900.

The reported sale of the New Brunswick Petroleum Co. to English parties is denied. The company is seeking to increase its capital in order to develop its oil areas.

T. J. Drummond, vice-president of the Lake Superior Corporation, says that the output of ore at the "Big Helen" mine near the "Soo" will be over 200,000 tons this year.

Ross & MacRae, Strathroy, have secured a contract for the construction of twenty-five miles of railway between Three Rivers and Shawinigan, the contract amounting to about $500,000.

The Record Stove Foundry, Moncton, N.B., proposes to increase its capitalization from $800,000 to $1,000,000, the increased capital to be utilized in establishing a new foundry at Vancouver.

A Moncton man named Joseph Stratton has invented a new babbitt metal which is attracting considerable attention and a large industry to manufacture the metal may be established at Moncton.

The Brandon Machine Works Co. has received the contract for all the iron work which will be required in the construction of the new $42,000 school building now being erected at Moosejaw.

The Chimalapa Land Co. have decided to build large mills at Montreal, the mills to be equipped with the latest machinery for the manufacture of lumber from the company's property in Mexico.

Work on the construction of the iron ore smelter at Port Arthur is progressing very favorably and it is expected that it will be in operation this winter. The blast furnace will employ a large staff of men.

The Westinghouse interests have purchased a site on the Niagara frontier on which they will build a large plant for manufacturing electrical machinery. The site selected is on the Niagara Gorge below the Falls.

The Haskill Lumber Co. are making great progress in Fassette, Que. They have recently purchased a new locomotive for the Salmon River & Northern Railway, for hauling out the timber, which will be transported by rail rather than by water.

The Dominion Iron & Steel Company rail mill rolled eleven hundred tons of rails October 12, which is a new record for the mills. The Grand Trunk Railway's order of 25,000 tons has been completed and the rolling of the Intercolonial's 25,000-ton order commenced.

The Nova Scotia Steel & Coal Co. for the nine months ending September 30th shipped 398,095 tons from their mines, as against 350,846 tons for the corresponding period last year. During September the company shipped 12,332 tons to Montreal, as against 14,504 tons the same month last year.

The Chatham, Wallaceburg and Lake Erie Electric Railroad paid duty on machinery and equipment last week amounting to $25,600. Already some $75,000 have been spent on the building and machinery in the power house at Chatham. The line is now complete between Chatham and Wallaceburg.

The British Columbia Electric Railway Company has just distributed $17,000 to the men in its employ in the shape of a co-operative dividend. Every man in the service gets $40. Last year's dividend to the employes netted each man $35, and the previous one $25. The dividend is paid from a fund set aside after the payment of a four-per-cent. to the shareholders. It consists of one-third of the net remainder after that distribution of profits.

The D. M. Steward Manufacturing Company of Canada, Limited, Toronto, has been incorporated for the manufacture of acetylene gas burners in Canada and also to act as selling agent for the D. M. Steward Mfg. Company of Chattanooga, Tenn. The company states that it is doing a good business in Canada in the line of metal workers' crayons and soapstone slate pencils, which have been manufactured and sold by the Chattanooga company for the past 30 years.

The coming winter promises to be the brightest ever experienced in the coal trade in Cape Breton. The Dominion Coal Company commenced this month to deliver coal to the Dominion Steel Company at the rate of 60,000 tons per month. Another contract with the Maine Central Railway calls for 75,000 tons for winter shipment. The Dominion Coal Company have erected immense coal pockets at St. John and Halifax in order to supply the increased steamship traffic as well as the local trade of Provincial towns and cities. It looks as if Louisburg, the winter port of shipment of the Dominion Coal Co., would this year experience the busiest season in its history.

Shareholders of Canadian steel concerns will be interested in the statement that, whereas for the first eight months of 1904 the States sent 93,256 tons of steel rails to Canada, only 4,680 tons came in this year. The Wall Street Journal prints a long article on this development, and says that the members of the "steel rail pool are receiving an object lesson in the practical working of the protective duty when the shoe is on the wrong foot. They were unable to bid for any part of the order for 150,000 tons of steel rails just given by the Grand Trunk Pacific to the Dominion Iron & Steel Company, because of the new Canadian duty of $7 a ton levied on all steel rails bought in the United States."

The annual meeting of the Granby Consolidated Copper Co., which was to have been held in New York on October 3, will be adjourned for two weeks owing to the absence abroad of President Langloth. The annual report for the year ended June 30 will show net earnings of $700,000, as compared with $283,000 the previous year. The company has been liberal in its expenditures the past year in purchasing new properties, $432,000 having been expended in doubling the company's acreage. Other charges have been made for extraordinary mine development work and smelter enlargement and improvements, so that net earnings will be smaller than might be expected. Next year the company is expected to be able to earn at least $130,000 a month net, and the beginning of dividends at the rate of 5 per cent. per annum is looked for at any time.

Companies Incorporated.

The Forbes Hardware Company has been incorporated in British Columbia, the capitalization to be $40,000 and the headquarters at Vancouver.

Standard Bolt & Screw Co., Toronto, share capital $40,000, purpose to carry on machinery business in all its branch-

es. Thomas Clark, Buffalo, Percival Stafford McKergow and John Jennings, Toronto.

The Walker Bin & Store Fixture Co., Berlin, share capital $40,000, to manufacture and sell store fixtures. The directors are Theodore Adam Witzel, William Caven McCuaig and James Andrew Hackett of Toronto, and Michael Seyler of Berlin.

The Fox Bearings Co., Toronto, share capital $40,000, purpose to manufacture, operate, introduce and sell a certain Canadian patent of invention of Tobias Fox. Directors, Tobias Fox of Woodbridge, and Thomas Sullivan and John Nicol of Pine Grove.

The Coleman Development Co., Haileybury, share capital $300,000, purpose to carry on the operations of a mining, milling, reduction and development company. Directors to be James Francis Gillies and Ralph Roy Little of Haileybury and John McKay of Sault Ste. Marie.

The Federal Electric Construction Co., Brantford, share capital $40,000, purpose to carry on the business of manufacturers and dealers in electric motors, dynamos and other electrical machinery. The directors are John Ellis, township of York, George Henry Kilmer and William Henry Irving, Toronto.

Mathews Steamship Co., Toronto, share capital $250,000, purpose to carry on the business of transportation of goods upon land and water, also merchandise and passengers with incidental and subsidiary powers. Directors to be Alfred Ernest Mathews, Richard Lippincott Denison Taylor, William Beardsley Raymond, Frank Ford and Britton Osler, of Toronto.

The Sublime Hygienic Cement Flooring Co., Toronto, share capital $50,000, purpose to manufacture hygienic cement tiles and blocks and marble mosaic, and to carry on a general building, construction and paving business. The directors are Leopoldo Ponzeo Scarrone, Louis Vincent McBrady, Luigi Del Negro, Pietro Venier, Umberto Corsi and Joseph Murphy, all of Toronto.

Canada Steel Goods Co., Hamilton, share capital $115,000, purpose to buy, sell and deal in manufactured metals, etc. Directors are John Straith Ainslie and Ralph Oliphant Young Ainslie of Comber, Arthur Frederick Hatch of Toronto, Arthur Ludlam, Arthur George Moffat and James Dryden Ainslie of Leamington, James Sim Wardlaw, Charles Cumming and George Hancock of Galt.

STEEL-BLUE ENAMEL.

An enamel for use on any metal and which will keep so long as it is tightly corked is made as follows: Dissolve 1 part of borax in 4 parts of water. Macerate 5 parts of bleached shellac in 5 parts of alcohol, saving out a small portion of the alcohol for dissolving methylene blue of sufficient amount to give the color desired. Heat the watery solution to boiling, and constantly stirring add the alcoholic solution. Stir out all lumps and add the blue solution. Before applying clean the metal bright with an emery cloth. Apply enamel with a soft brush.—Popular Mechanics.

Much said—little done. Discussion is valuable only when it works hand in hand with accomplishment.

No. 26. OSHAWA, ONT. Oct. 21, 1905

LOW PRICE

It would be purposeless drumming on our part to ask you to put in a supply of **Perfect Metal Lath** if we didn't know that it was possible for you to do so on either a small or large basis, but always at a proportionately small cost. Metal Lath doesn't appeal to you like general hardware, we know, because its sale in your neighborhood may, perhaps, be in its infancy. When, therefore, you are asked by other manufacturers, in spite of these facts, to expend your money and accept risk with meagre profit, you simply won't do it ; and who can blame you ?

MAKES POSSIBLE

With **Perfect Metal Lath** you need not expend one cent until you have made your sale, or, in other words, you can be the connecting link between builder and maker if you do not wish to carry a stock. You take no risk ; lose no time. The order can be secured in your store (the same as the order to supply hardware) and sent direct to us. While **Perfect Metal Lath** has superseded wood lath, it has nothing to do with carpenters. **It's sold by hardwaremen, or through them, at 10c. per square yard.**

YOUR BUYING

We take the onus of "making good" —proving **Perfect Metal Lath's** perfect qualities : Resistance of Fire, Accurate Key, Non-Corrosiveness, Saving of Labor, Time and Money. You are, of course, a busy man, and no doubt your eye is on the "old standbys" of the business, but still you could give some attention to **Perfect Metal Lath**, the lath of **to-day**, and also make a bid for trade on our **Metal Shingles, Steel Ceiling, Cornices, Wall Covering, Eavetrough, Furring, Studding**, etc. Think over it, anyway. Try before you condemn.

BUILDING AND CONSTRUCTION

ATKINS SAW SET AND VISE.

E. C. ATKINS & CO., Incorporated, the well-known saw manufacturers, of Indianapolis, are offering a new saw set for hand saws, as shown in illustration No. 1, that is sure to call forth favorable comment from all practical people. The device is so constructed that a uniform blow can be given to each tooth, thus insuring a perfectly even set throughout the blade. There is no danger of breaking the points of the most highly tempered saw, even when operated by a novice. It is adjustable to any amount of set desired and will set the finest as well as the coarsest tooth perfectly. Cuts 2 and 3 illustrate the Atkins Combined Perfect Saw Set and Vise. This is a very convenient combination and can be instantly adjusted to the different operations. Cut No. 2 shows the filing clamp ready for use. The jaws are rubber cushioned. It is practically noiseless. Can be tilted to any desired angle. Works on the lock lever principle. It can be fastened to bench with malleable iron screw clamp. Cut No. 3 shows same tool adjusted for use as a saw set.

UNIQUE MACHINERY.

The Pedlar People of Oshawa and Montreal have this week contracted in New York for the early delivery of the extensive plant required in the manufacture of the new fireproofing commodities which they intend to make. Their purchases comprise probably the heaviest and most expensive machinery of the kind ever brought into Canada.

Arrangements have been made for the delivery of these machines at the Oshawa factory within thirty days, and the product will be on the market before the first of the year. A comparative statement of the first costs of a fireproof partition manufactured from steel as against one made from porous terra cotta will appear in "Pedlar Talks" within the next few weeks, and will be of certain interest to our readers.

A handsome bank building is to be erected at St. John by the Royal Bank.

BUILDING NOTES.

The G.T.R. are to erect a new station at Wingham.

C. T. Eraut is building a new residence at Fort Frances.

A new Methodist Church is to be erected at Souris, Man.

The C.P.R. have decided to erect a new station at Varcoe, Man.

A. W. Taylor, Ingersoll, has begun the erection of a new store building.

The Bank of Commerce are to erect a building at Woodstock, Ontario.

T. A. Burrows will build a saw mill near Grand View, Man., this Fall.

The Cockshutt Plow Co. of Brantford is erecting a large warehouse at Regina.

A. C. Patch has secured the contract to build a $30,000 hotel at Fort William.

Dr. MacKenzie has commenced the construction of a new hospital at Fort Frances.

The E. B. Eddy Co. have commenced the construction of a large five-story warehouse in Winnipeg.

The C.P.R. are erecting a large machine shop, forty by forty-eight feet and two stories, at Havelock.

The Standard Bank are to spend $20,000 on alterations to their building on Wellington street, Toronto.

A $10,000 school is to be erected at Rosebank, Man., and a new Church of England is to be erected at the same place.

J. Stewart, Hamilton, is to build a brick residence to cost $2,200, while W. Crawford of the same city is to build one to cost $2,400.

A. M. Nanton, of Osler, Hammond & Nanton, is to erect a business block in Winnipeg on the corner of Portage avenue and Main street.

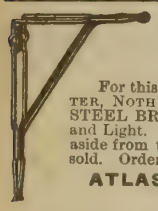
A new hotel to cost $300,000 is to be erected on Ward's Island, Toronto. The promoters are Judge Morgan, Thomas Aikenhead, Major Carlaw and others.

A $20,000 concrete and steel bridge is to be constructed across Rideau River near Herdsmen's Bridge. The work is to be done by the Montreal Bridge Co.

The contract for the steel structural work in connection with the extension of the Canada Paint Company's Montreal plant has been awarded to the Dominion Bridge Co. of Lachine.

The Canadian Pacific Railway have commenced the erection of five new buildings near the Angus shops, Montreal, the total cost of which will be $33,550. The new structures will include two restaurants, a paint shop, a storehouse for old material.

The Grand Trunk Railway have offered a free site and $4,500 for the erection of a Y.M.C.A. building at Allandale if the townspeople will contribute an equal amount with the railway for the maintenance of the building. Work will likely be commenced this month.



Peter Lyall & Sons, Montreal, have sublet the contract for laying the floors of the new steel sheds which they are erecting on the wharves. Messrs. Stack & Brogan were the successful tenderers, and they estimate that it will take about 200,000 scoria blocks to complete the ground floor of No. 2 shed, some four hundred yards of which have already been finished.

Building has been very active at Peterborough during the present year and it is estimated that the total outlay for the year will reach $400,000. About 200 new houses will be erected, an increase of about 50 over last year. Amongst the large enterprises under way are the following: New Opera House, $30,000; American Cereal Co., mill and elevator, $45,000; Peterborough Shovel & Tool Co., factory, $15,000; Separate School, $25,000; Methodist Sunday School, $5,000.

In Winnipeg the building record is greater than ever. Compared with the total figures for previous years it shows

a marvelous increase. In last year's record several millions were represented by the new C.P.R. terminals, the Eaton block, the gas works improvements and other large structures. There are over 1,200 more buildings this year to date than last year, but the majority of these are residences. The report is as follows: 1904—Permits, 1,768; buildings, 2,268; cost, $9,651,750. To Sept. 30, 1905 — Permits, 2,761; buildings, 3,539; cost, $9,627,950.

The Imperial Steel & Wire Co., of Collingwood, Ont., will erect additions to their factory to cost about $100,000. The buildings will consist of a fence mill, 200x60 feet, two stories; galvanizing building, 250x40 feet, and warehouse, 200x100 feet. The additional machines to be installed will consist of a 250-horsepower water tube boiler and a compound condensing engine of 150-horsepower to drive a 100 k.w. generator. This generator will be used to drive the nail mill, with 40 tons daily capacity; wire fence mill, with 10 tons daily capacity, and galvanizing plant, 10 tons daily capacity. The company will install the very latest devices in motors and silent chain drive in the transmission of their power and the operation of machinery.

Canadian Pacific Railway, Nolan St., Hochelaga Ward, lunch room, $14,225.

H. Contant, 836 St. Lawrence street, alterations to dwelling and stores, $2,000.

LEGISLATION TO IMPROVE BUILDING IN MONTREAL.

A new by-law recently adopted by the Montreal City Council is for the purpose of improving the appearance of St. Catherine street, the main retail thoroughfare, by fixing a definite standard for the buildings hereafter to be erected there.

The by-law declares that every new building erected on this street shall have a frontage of cut stone, pressed brick, or other incombustible material, to the exclusion of wood cased in iron, etc. Furthermore, it is enacted that these buildings shall not be less than the equivalent of three storeys in height. Another new restriction is that it shall not be lawful to construct, occupy and maintain on the lots bordering upon said St. Catherine street, on either side thereof, any factory, private stable or livery stable, nor shall it be lawful to enlarge any existing buildings to be used as such.

"Made in Canada"
For Forty Years
Trade C Mark

To The Trade

PLEASE NOTE: That every box of Horse Shoe Nails manufactured or sold by us, has our name and registered trade mark (the Gothic letter "C") on same. Any imitation of either on a box of Horse Nails is illegal, and a penal offence in Canada.

The "C" Brand Horse Nails are sold by us with an absolute guarantee, that every nail is perfect and ready for use, or if found otherwise, they will be exchanged free of cost, or purchase money refunded on application.

Our process of manufacture differs in many respects from other makers, and with better results.

We use exclusively the best obtainable charcoal steel nail rods made especially for our requirements in Sweden the quality of which has the greatest tensile strength (average 54,000 lbs. per square inch), and durability of any material of which we have any knowledge or used in the world for this purpose.

Our nails are of the best proportions according to size and work required; have hardened bevelled points which will penetrate easily into the hardest hoofs, without either split or bend in driving. The heads will not break off in the most severe frosty weather, or from hard usage on hard roads or stone paved streets.

The combination which "C" brand nails have of great toughness and durability, enables the clinch to hold the shoe on firmly until worn out, or its removal is required.

We claim they are not surpassed in quality, pattern or finish by any other horse shoe nails made in the world, and therefore will be found the most economical for the farrier to use, as compared with any lower priced article made by the "cold process" or of cheaper material.

When asked to purchase second quality nails, now being pushed in Canada, please do not forget that our "C" brand is made in Canada by Canadian labor, and therefore your preference is respectfully solicited by ordering the "C" brand.

We make one quality and have only one price, namely, 40, 10 and 7½ per cent. **discount f.o.b. Montreal.**

HEATING AND PLUMBING

THE PLUMBING SITUATION IN TORONTO

A PECULIAR situation exists in Toronto plumbing circles. For some time committees of the recently organized Central Supply Association and the Master Plumbers' and Steam Fitters' Co-operative Association have been working together in arranging plans whereby both organizations can work together to the best interests of the trade, with justice to the general public. Practically every section of trade in which jobbers, contractors or retailers are organized is governed by some working agreement, and the master plumbers and supply men prefer to work in friendly agreement rather than in open warfare.

* * *

When the Crashley case was before the courts a few months ago the plumbing supply men were charged with combining to restrict trade, but it was not shown that the jobbers refused to sell to any reputable master plumber whose account was considered satisfactory. The supply men recognize the value of organization, they see the great improvement in Canadian plumbing since the master plumbers have organized, and they realize that men who are cutting each other's throats in competitive warfare are not likely to be as able to pay their bills as men who charge a living price for the work they do. For these self-evident reasons the supply houses are desirous of seeing the master plumbers organized on a sound basis. It is good business policy for them to aid the Master Plumbers' Association in every legal manner.

* * *

The Master Plumbers' Association has done a commendable work in improving the standard of plumbing work, not only in Toronto, but everywhere in Canada where its influence extends. Working hand in hand with the boards of health, the association has done much towards giving Toronto and other Canadian cities the reputation of being the best plumbed cities of their size in the world. And the statistics issued by the boards of health speak volumes for the improved sanitation brought about by the plumbers' organization. It is good business policy also for the Master Plumbers' Association to work in agreement with the journeymen in providing continuous work for the union men and in avoiding the disastrous strikes which have a bad effect on all sections of the community. The master plumbers have a reciprocity arrangement with the journeymen whereby no member of the Master Plumbers' Association shall employ non-unionists, and the union men in return agree to work only for members of the Master Plumbers' Association. This does not interfere with the right of any non-unionist from working for plumbing contractors who are not members of the Master Plumbers' Association. The two organizations would appear to be entirely within their rights in carrying out such an arrangement.

* * *

In accordance with this agreement the union men gave instructions a few days ago that all union journeymen working for contractors not belonging to the Master Plumbers' Association should leave their jobs and secure work from association members. This order chiefly affected three ex-members of the association who are posing as martyrs before the public. but who, report says, retired from the association because their resignations were called for. All the journeymen employed by these contractors have not obeyed the order of the union, however, and that body now has a problem on its hands in disciplining its members for breaking the union's agreement. The order given by the union was made public, and sensational stories immediately appeared in the daily newspapers, some of the employers concerned giving interviews explaining their side of the controversy, and threatening legal action against what was termed the "plumbers' combine."

* * *

Supuly houses have been selling supplies to any dealer. It has not been the intention to make any change in this respect, the customs authorities being understood to have ruled that any restriction of trade would result in a change in the tariff. It is known, however, that the supply houses have offered to pay a commission to the Central Supply Association on all business secured, the latter association offering their 7½ per cent. commission to the Master Plumbers' Association if its members buy from the Canadian houses represented in the supply association. It is contended that the giving of this commission is entirely legal and similar to the payment of the usual 15 or 25 per cent. commission on advertising or subscriptions by newspapers. A part of the proposed agreement is that a joint committee of the supply association and master plumbers shall work together to encourage the development of the plumbing trade and to prevent any restriction whatever being put upon the industry.

* * *

According to the newspaper reports the supply houses are to charge non-members of the Master Plumbers' Association an additional 5 per cent. on all purchases, making a 12½ per cent. discrimination against them. This, however, appears to be entirely without foundation, as it would be suicidal for the jobbers to discourage outside sales. Their policy, so far as Hardware and Metal can learn, is to sell at one price to everyone. The giving of the 7½ per cent. commission through the Central Supply Association, however, would be an incentive for outsiders to join the master plumbers' organization in order to secure this benefit, the extension of the association's membership being of advantage to every branch of the trade.

* * *

One of the plumbing contractors whose business is affected by the proposed withdrawal of the union men is Joseph Harrison, 608 Yonge street, who withdrew from the Master Plumbers' Association some months ago. In an interview he stated that his men had no reason to leave him and had not done so, he having lived up to every requirement of the union except the one referring to membership in the Master Plumbers' Association.

"Why did you leave the association?" was asked.

"Because I am not in sympathy with the methods used by them in securing contracts. I wanted to have liberty to do an honest business, and to give the public a fair show. There are several other reasons.

"In the first place, I found that my business was decreasing to such an extent that it became a serious question to me as to whether I would retain my membership, or retain the business which I had worked up. My business decreased from $121,000 in 1902 to $31,000 in 1904. This was due to the fact that the rules prevented me from figuring on work in outside towns and cities.

"Again, I had been deprived of some work from men who were really my customers. Some men, who wanted to give me contracts, were prevented from doing so because the association had in solemn conclave decided that some one else should get it, and my tender was of no avail.

"I wasn't satisfied either with paying 5 per cent. into the association on all work awarded to me, which was more than was needed for the running expenses."

"Will you take any action if the union tries to enforce its order?"

"Most certainly I shall, I have everything all ready, and will go to the courts immediately with a charge of conspiracy to boycott. I promise the public some startling revelations then."

* * *

J. B. Reeves, 760 Queen street east, another ex-member of the association, whose men were called out by the union, gave similar statements to the press and followed up the matter by securing an injunction restraining the Master Plumbers' Association and the Journeymen Plumbers' Union from interfering in any way with the union men in his employ, and preventing the employes from going out in response to the call from the local union. Mr. Reeves has also entered suit against the union, and Messrs. Storey and Bush, members of

that organization personally, for unstated damages. The affidavits are made by Joseph Rose, improver; M. McCormick, plumber, and Benjamin Black, bookkeeper.

It is also said that Crown Attorney Curry may proceed against the two organizations, the employers and the union, on a joint charge of conspiracy. Mr. Reeves has furnished the Crown with information upon which the charge may be pressed. Crown Attorney Curry says if he can get the information desired he will proceed against the individuals first, and then against the organization. He believes the agreement is illegal, and is an unjust interference with the rights of every man.

* * *

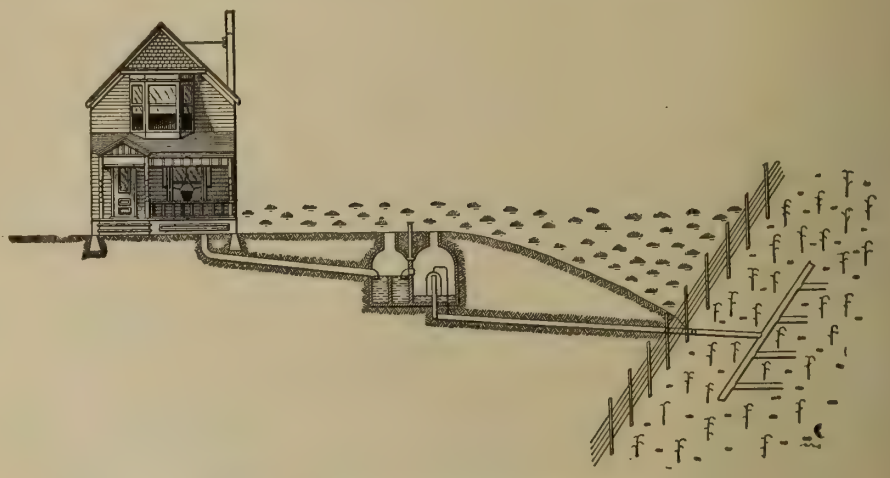
The publication of these interviews in the daily papers has put the master plumbers' organization in a bad light before the public, and it would seem to be the wisest course for the association to pursue to call the bluff made by Messrs. Harrison and Reeves by aiding in the proposed investigation. It was only a question of time before some such a step was made necessary, and if there are any internal differences in the association they should be adjusted by the members, as the perpetuation of wrongs would certainly result in the disruption of the organization, an event which would have a disastrous influence on the entire trade.

* * *

Taken as a body the members of the Master Plumbers' Association are as fine and honest a set of men as can be found anywhere. They have forced members who have acted unfairly to withdraw from the organization, and can do this again if necessary. Other trades are organized on a similar businesslike basis, but owing to the sensational newspaper reports master plumbers are now looked upon as something akin to highway robbers. Yet they will not be found to be living in better houses than other tradesmen, and few are rated in mercantile reports as possessors of property worth up in the five figures. That the public is not overcharged is evidenced by the fact that the association's rules call for a 25 per cent. profit, one-fifth of which goes into the association treasury. To do business successfully, maintain a shop, pay fair wages, earn an average living, and pay one's bills, the profit named is none too large.

* * *

The whole matter will tend to give added interest to the semi-annual convention of the Ontario Master Plumbers' Association in Toronto on Thanksgiving Day. The gathering will meet at the association rooms, 21 Richmond street west, and a banquet will be tendered the visitors by the Toronto association in the assembly hall, Temple Building, Thanksgiving night, when every master plumber in Ontario, whether a member of the association or not, is an invited guest.



PLUMBING GOSSIP.

John Howie, plumber and tinsmith, of St. Johns, Que., was among the out-of-town buyers to visit Montreal during the past week.

SANITATION OF A COUNTRY HOUSE.

Chapter on "Waste Disposal" from a book by Dr. H. B. Bashore, entitled "Sanitation of a Country House." Published by John Wiley & Sons New York, price, $1.00.

IN taking up the study of waste disposal it is necessary to remember that "out of sight, out of mind," is not hygiene. The use of his senses long ago impelled man to put away his waste products, and this was the first step in the evolution of waste disposal. The use of the reason—the second step born by the labor of countless centuries of costly mistakes has taught us that these wastes must, in addition to being put away, be turned into harmless compounds before we can call the work complete. Though this seems very simple in theory, in practice, on account of the complicated conditions of modern civilization great question of sewage disposal. If one is situated near the sea or on a tidal river, the easiest method is to run the sewage directly into this. It is not admissible, however, to run raw sewage directly into a fresh water stream or lake. This is, nevertheless, frequently done, and it has a bad moral effect on ation we often fall far short of the ideal.

A Method of Sewage Disposal for an Isolated House.

In most country houses water under pressure is available, and when this is so water carriage of excreta is certainly desirable, necessitating thereby the use of water-closets and plumbing, just as in the city. Then there follows, of course, the use of the sewer and the the rural citizen who is by no means over burdened with sanitary devices. Of course, some of our great fresh water streams seem to have been given over to sewage by the cities along their banks, and the country resident living on such a stream could hardly be blamed for using it for his own sewage disposal.

When it comes to the smaller streams and lakes such a plan is wholly inadvisable and some form of disposal plant becomes necessary. Intermittent sand filtration is a method which disposes of sewage satisfactorily and gives an effluent which can be turned safely into any stream however small. A plant of this sort, though used extensively in various towns, is only advisable for certain houses where the character of the soil or of the toporaphy makes it difficult to use one or the other method of irrigation—surface or subsoil—either of which is an ideal plan of disposal for nearly all isolated houses.

In surface irrigation the sewage is simply distributed over cultivated land where it is rapidly absorbed and the filth disposed of by the numerous bacteria of the soil. By this method the sewage from the house is first sent to a settling tank, or rather an intercepting chamber, where the solid material is decomposed and macerated into very small particles; from this liquid passes into a flush tank, from which it is discharged by an automatic siphon into surface gutters, and from these allowed to spread over the ground or run into furrows between growing vegetables or grain. The intermittent flow of sewage, which is brought about by the use of siphon, is a desirable feature for the efficient working of this plan, especially in the winter.

Surface disposal of sewage in this manner is perfectly satisfactory and creates no nuisance. In some instances, however, due to lack of suitable location, sub-surface irrigation might be more desirable. The house arrangements in this case are the same as for a surface plant, except that the foul liquid, after leaving the flush tank, flows into open-jointed drain tiles laid under the ground near the surface—within eight or ten inches at least. This last is important for the reason that the filth-destroying bacteria are vastly more numerous near the surface. In putting up a plant like this the flush tank should have a capacity of something like fifty (50) gallons for each person, and in good absorptive soil about one hundred (100) feet of two-inch tile for each fifty (50) gallons capacity of tank.

There is yet another method simpler and less costly than those described, provided land is abundant and the house at a considerable distance from other dwellings. In this method the settling and flush tanks are eliminated and the sewage is turned directly from the

house to the land, flowing from the sewer into shallow trenches, between which corn, vegetables, or trees may be planted. In order not to overtask the land at any one place the trenches should permit of being blocked at various points so as to divert the sewage into different trenches. A wintry climate does not interfere with the working of these various sewage farms, for the sewage, more or less warm, readily cuts its way through snow and ice and gradually filters through the soil beneath.

With the sewage disposed of, there yet remains certain other waste products to be gotten rid of—garbage from the kitchen, rubbish of various kinds, and ashes. The disposal of these products becomes easy if the various kinds are collected and kept separate. A good way is to have a series of receptacles for the different materials, and a certain place for each one. The paper, rags, rubbish, etc., for which flour sacks, supported by iron racks are used, might be still further subdivided, according to circumstances. Another, perhaps better way of collecting, is to have the receptacles arranged in one place, instead of being scattered here and there about the premises; for example, in a large box placed at the back of the house near the kitchen door, so as to be retadily accessible.

Now as to the ultimate disposal of household waste. The garbage is best got rid of by earth burial—simply put into a shallow furrow in a field and covered with a little earth. If the vegetable bed is near the kitchen, a good way is to have a hole in the bed and practice daily disposal of the garbage. Every evening the garbage should be covered with earth; and in addition, a tight board lid should cover the hole during the summer months, else the place may become a breeding place for flies and degenerate into a nuisance. Screening the hole, which I have tried, will not be sufficient, for the little fruit flies, which are very likely to choose such a breeding place, will creep through a screen of the smallest mesh.

The non-combustible part of the rubbish, such as bottles, tin cans, scraps of metal, etc., can usually be sold to the junk dealer; and the combustible part, if not saleable, should, of course, be destroyed by fire. Ashes can be used in almost any place for filling, making paths, or for a foundation under pavements, than which there is nothing better, the engineers say.

We have now to consider that class of country houses—generally of the smaller kind—where a sewerage system is not available, and for such we have to adopt an entirely different plan for the disposal of excreta, namely, that known as the "dry" method. This calls for the use of a galvanized iron pail and a seat exactly like that of an ordinary water closet. At the side of the seat is a box for holding the absorbent, which consists of sifted coal ashes or dry earth. After use a little of the absorbent is scattered in the pail, and when the pail is filled it is emptied on cultivated land—a field or a vegetable bed. If the pail is emptied near the house, a little earth should be raked over the pile, and in a short time—a week or two in summer, with corresponding increase in cold weather—all evidence of filth will have disappeared. Thus simple is the "dry" closet, an arrangement which, if taken proper care of is perfectly clean, inodorous, and sanitary.

When the dry method is used we will have certain waste waters from the bath and kitchen sink to dispose of, and this is best done by some form of surface drain suspended over the vegetable bed. One is made of a six-inch galvanized roof-gutter pierced every twelve inches by one-fourth-inch holes. This allows the filthy water to be distributed evenly over the ground without forming puddles and mud holes. The disposal of garbage, ashes, and rubbish is conducted in the same way as described previously.

CENTRAL HEATING PLANT AT CHATHAM.

OTHER cities may have led the way in the introducing of public conveniences such as gas, electric light, and water works plants, but Chatham has the honor of being the first place in Canada to instal a public heating plant, says a despatch from Chatham. The Wallaceburg, Chatham, & Lake Erie Electric Railway Co. is behind the project, which it is expected will be completed according to present plans before the really cold weather sets in. Nearly every business block and public building in the city has agreed to make the experiment, and if it proves as successful as the railway people say it will, then it is intended to extend the system throughout the whole place.

The exhaust steam from the power house is to be used for this purpose, and it is claimed that there will be enough of this without the manufacture of live steam to supply all the heating at present contracted for. To the outsider this may sound like a fairy tale, but the people of Chatham do not look upon it as such, and are almost wishing for Winter to set in that they may have the luxury of having their buildings heated without the trouble of shoveling coal into the furnace and carting the ashes away afterwards. And then there will be no more coal bills to pay. Steam bills will take their place, of course, but that will be overlooked in the joy of having at last discovered a way of escaping those terrible little billets doux from the coal man.

The method by which the steam will be conveyed about the town is reminiscent of the story told by Bangs in the "Houseboat on the Styx" of the way in which the associated shades in Hades were provided with their tobacco smoke. Tne tobacco was burned in one of the many furnaces of the lower regions, and the smoke conducted off by pipes into a huge reservoir. From this rubber tubes, to which were attached meters, registering the amount of smoke consumed, ran out to the smokers, who used what smoke they required, paying for it by measure. In this way all waste was avoided, and there were no cigar butts to throw away. There will similarly be no waste in the Chatham heating system. The system will run from the big engines of the Street Railway Co. into the pipes which are now being laid through the main streets of the town, and from these it will be tapped off into the buildings along the way.

Cold-Proof Tubes.

The pipes through which the steam passes is an iron one, wrapped in asbestos, and this again is enclosed in a tin tube. Outside the tin tube there is an air cushion, and outside of that again a wooden covering, which is bound with wire, and the whole treated with creosote and other materials. In this way a durable and cold-proof tube is secured. At short intervals there are very expensive condensing valves, which make up in themselves the bulk of the cost of laying the pipes, which amounts to $8 per foot. The pipes are laid in a rather peculiar manner, the depth varying from four to six feet, in order to allow a sufficient slant for drainage, for there is sure to be a little water condense in the tubes. This runs off into the sewers.

There are altogether at present some 3,600 feet being laid, which, at the price mentioned above, brings the amount of the investment up to $28,800. Next year pipes will be laid throughout the town wherever there promises to be enough business to make the outlay pay.

The manager of the company says that the rates which would be charged would not lower the heating expenses of the users to any appreciable extent. They would, however, be saved the trouble of paying men to look after their furnaces or of doing it themselves. It is expected, however, that there will also be a considerable reduction in insurance rates, because of the absence of fire in the buildings. The rates will be made up in two ways. There will be a charge based on the number of cubic feet in the building to be heated, which will vary from $3 to $5 per hundred feet, according as there are one or more sides exposed to the weather. On the meter system the charge will be made at the rate of 50c. per thousand pounds of water condensation. He claims that there will be no loss in heat at all, and that the steam will be just as hot a mile away from the boilers as where it enters the pipes.

It is not a new experiment, but has been successfully carried out in Tonawanda, Lockport, and other American cities. The manager of the concern here expects to see the idea taken up by several other Canadian cities as soon as Chatham has successfully demonstrated that it is practical.

The railway, when completed, will be one of the best suburban roads in Ontario. There will be altogether from sixteen to twenty cars in operation, which will run over forty miles of road from Wallaceburg to Erie Beach on Lake Erie. In the power house there will be three 450 horse-power motors, and six Babcock and Wilcocks boilers of like capacity.

P. Filion, tinsmith, of St. Therese, was in Montreal this week, buying supplies.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 20, 1905.

MONTREAL plumbers are exceptionally busy at the present time and, from the large orders which the supply houses are receiving from outside points, it would seem that this condition is general throughout the Province. Nearly all the contracts now under way are for heating, though we have been informed this week of a number of big plumbing jobs which have just been let.

The natural result is that enameled ware is in great demand. Canadian baths, sinks and lavatories are commanding a big and increasing sale.

There is a great scarcity of sizes in iron pipe, last week's situation being accentuated. While no advance has yet been made in this line, it may be expected at any time now. The manufacturers are making no concessions, and it is impossible to add to orders now booked. This is a strong indication of approaching advances.

Pig lead has reached a still higher figure during this week, but as yet this has not affected lead pipe or solder.

Range Boilers—No change in prices has yet occurred, but the tendency is decidedly upward. The big manufacturers will immediately advance prices on boiler plates, according to present indications, and the effect will probably be seen shortly, on range boilers. We quote: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—No change is recorded, although pig has taken another jump. We are quoting: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe—Manufacturers are showing a disposition to refuse extension of orders for future delivery. Some sizes are already decidedly scarce, and it is expected that an advance will be shown very soon. Our quotations are: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe, 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings— Business is keeipng in the splendid condition evident for several months past. There are no new features and our prices are unchanged. Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder— Lead is higher again this week, and tin is also firmer, conditions which tend to create interest in solder. We are still quoting: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 20, 1905.

A BIG slash in iron pipe is the talk of the trade in Toronto this week. For some reason the various houses commenced slashing prices last Saturday, some quoting 3 per cent. less than former figures, while others cut their prices 5 per cent. An effort is being made to bring about a steady market again, but at present the situation is somewhat demoralized. The cut coming at this time when prices of iron are higher than at any time this year is most peculiar. An advance had been expected, so that the reduction came as a surprise to most of the buyers and they lost no time in taking advantage of the differences amongst the supply houses. The explanation most generally accepted is that one of the jobbers had a very large stock on hand and was not getting the business he expected, so in order to dispose of his stock he commenced cutting and the other houses had to meet the new figures. The demand for iron pipe at this time is very heavy as heating contracts are being booked in large numbers. Had the cut come, therefore, at the end of the season rather than in the middle of it, the situation would not have been so surprising. Iron pipe fittings have of course been effected by the lower prices for iron pipe, but the cut has not been so general in this line.

Business in plumbing supplies continues very brisk and the demand for enamelled ware is particularly heavy, the Canadian manufacturers being favored with all the business they can handle. The call for lead pipe is also much greater than at this time last year with the exception of iron pipe and fittings prices continue the same.

Lead Pipe—Prices are very firm and an advance is looked for shortly. Our quotations are as follows: Lead 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Demand is active with producers keeping well up to their orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—An open market on iron pipe has caused a big demand for fittings and prices have not been held to firmly. The cutting has not been so general, however, as on iron pipe. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

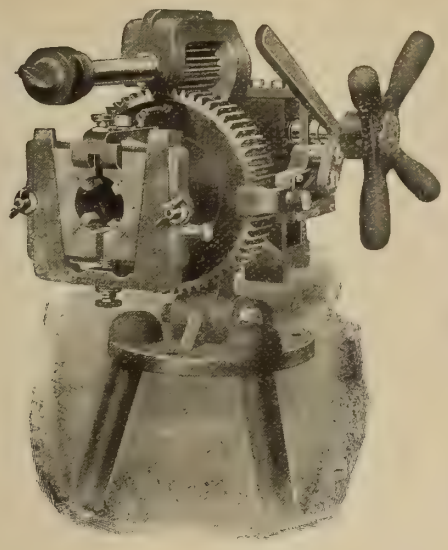
Copper and Range Boilers— Increasing business is reported owing to the completion of building contracts. The discount continues at 15 per cent.

Galvanized Iron Range Boilers—Trade is quite brisk and prices are strong. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—Instead of the expected advance on iron pipe owing to the high price of raw material an open market has resulted from the price cutting of one of the large houses. Discounts of from 3 to 5 per cent. have been given off list figures, and a very large trade has been done at the lower prices. We quote as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9.00; 2 1-2 inch, $15.75; 3 inch, $30.50; galvanized 1-4 inch $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Firmness in the lead and tin markets keeps solder quotations very strong. Business being done is heavy. We quote: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware—The heavy demand for some lines has caused a scarcity, but on the whole, the manufacturers of Canadian ware have kept well up to the demand. Prices continue un-



RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

MUELLER FULLER WORK

STANDARD GRADE BIBB

One of the most tedious operations in reassembling fuller bibbs having wick packing, and the hardest to do right, is putting on the packing.

The packing in Mueller Fuller Bibbs is a completely formed piece of rubber composition with a lubricated cloth insertion and slips over the stem just like a washer. The operation is quick and it can't be done wrong.

Muller Fuller Bibbs are made in plain and hose patterns and with tail pieces for all styles of pipe connections.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed*.

changed. We quote as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50; special, $15.50; 3 inch rim, first quality, $18; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality, $19; special, $17; 3 inch rim, first quality, $20.50; special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.00.

PROGRESS OF ELECTRIC HEATING.

OUR company have been paying considerable attention to this branch of the business for some time but did not do it systematically. A year ago we possibly had upon our system a dozen flat-irons in residences. About that time we began a campaign for the introduction of a flat-iron as a necessity rather than as a luxury, with the result that we have on the system to-day more than 600 irons consuming possibly seventy-five to ninety cents each, and in our case, being a water-power company, adding absolutely nothing to the expense except office expenses we have introduced these irons in laundries, supplying about eight laundries, the installation varying from fifteen to forty irons. We have displaced gas-irons in a town where gas is sold at ninety cents a thousand cubic feet upon a basis of three cents for the electricity. We find that three cents for electricity in an ordinary flat-iron is equivalent to about $1 a thousand, and our experience has taught us that laundries and families or any one else having to do with the particular apparatus will pay from ten to twenty-five per cent. more for convenience, quickness and cleanliness in the use of electricity as against ironing by any other method.

We have also—and I regret to say that I have not had time to tabulate this particular investigation—for a year past been experimenting with complete kitchen outfits in one of our towns, selling the current for this particular outfit at four cents per kilowatt-hour, with the distinct understanding that the family was to keep a daily record of what they cooked, how long it took to do it, and to read their meter before and after each piece of work, so that this, I take it, will be a somewhat valuable record for this association to have when the results of the experiment are tabulated. We find that the particular family which was given this advantage for the purpose set forth is satisfied with the result, and will from now on continue using this apparatus as against gas which it can buy at $1.50 per 1,000. The question was raised by one of the local companies as to the possible utility of using electricity in laundries in ironing. It seems to me that the experience of that company must have been particularly unfortunate, because this question has not been raised with any of the laundries upon our system. We have been supplying some of these laundries now for about a year.

We do find that electric irons, electric culinary apparatus, curling irons, and those small things which pay anywhere from twenty-five cents to fifty cents or a dollar a month to the central station company can be successfully introduced, but can only be pushed by personal solicitation. We engaged a woman who knew of the advantage of the apparatus, who said to us that she would go upon our system, and we are in a city where there are three competing companies, but that she would confine her work to our lines and would sell these irons for us upon a margin if we would let her have them at cost. We did that gladly and she introduced a great number of these irons for us. We let a lot of them out on a thirty-day trial, and out of the hundreds put out sixty-five per cent. stuck, and we believe this year our revenue from this sort of service will be increased not less than $10,000 a year without any appreciable expense to us. —A. I. Selig, National Electric Light Association Convention.

PLUMBING AND ELECTRICAL NOTES.

Chadwick Brothers, Hamilton, have erected a new factory and are making a fine line of electrical fixtures.

Messrs. Foley, Lock & Larson, Winnipeg, are installing one of the largest electrical plants west of Toronto in their new building. The work is under the supervision of Ernest S. Harrison and the machinery is to be used in connection with the company's new candy and biscuit factory. The installation includes two 100 horse-power tandem compound engines, manufactured by A. L. Hide & Sons, of Springfield, Ill., two 75 k.w., 250 volt generators and 27 motors. The plant will be one of the largest isolated plants ever placed in Canada.

Messrs. Pell & Co., plumbers, of 192 Queen street east, Toronto, have been awarded judgment by Mr. Justice Magee in the Non-Jury Sittings against the executors of the late Elizabeth Young for $1,204, balance of account.

The Canada Brass Manufacturing Company, London, suffered a loss from fire of $35,000 or $40,000 last Saturday night, the damage to manufactured goods being serious. In addition to the stock destroyed, over 2,000 fine tools were lost in the fire, and every piece of brass goods in the place will have to be rebuffed, owing to the effect of the smoke upon it. The loss, however, is fully covered by insurance.

HEATING ONE-STOREY BUILDINGS

"SO far as their construction is concerned, the simplest of all structures requiring ventilation and heating are one-storey buildings, such as mills, shops and exhibition buildings," says an extract from Treaties on Ventilation and Heating, published by B. F. Sturtevant Co., Boston, Mass. But no other form of building has so large an amount of wall and roof surface per cubic foot of enclosed space, or such high and extended rooms; in fact, such a building, as a rule, forms only a single room. As a consequence the most efficient system is necessary; it is not alone sufficient that the apparatus shall be large, to allow for the excessive heat loss from the building, but, above all, the arrangement of the distributing ducts must be such as to most economically utilize the heat supplied; for underheating at the floor and overheating above is one of the most natural consequences of an imperfect system of distribution. Under such circumstances the apparatus itself is frequently condemned as having insufficient capacity, when the trouble lies entirely in the manner in which the heated air is delivered to the building.

In buildings of this type the principal provision is to be made for the heating, for the occupants are generally separated, and the air supplied for heating will answer all the requirements of ventilation. But it is, nevertheless, necessary that they should be provided with fresh air in sufficient quantity. One of the inherent virtues of this method of heating is that it ensures such supply. As the air provided is generally in excess of that required for ventilation, increased economy can be secured by using over again a portion of the previously heated air. This may be done by arranging dampers or doors so that part of the air entering the heater is drawn from out of doors, and part, or if desirable, the whole, from the room. In fact, in the ordinary manufactory the common practice is to nominally take the entire air supply from within the building. This does not result, as might be supposed, in a total lack of ventilation, for a very considerable amount of outward leakage takes place through the walls and around windows and doors. Sufficient, indeed, to cause a similar inward, but imperceptible, leakage at other points in such quantity as to result in a comparatively frequent change of air within the building.

One of the greatest difficulties in a building of this character is to heat it rapidly in the morning, after it has cooled during the night. No other system can so completely and rapidly meet this requirement as that here presented. When it is desirable the engine may be run slowly all night, and the building maintained at a moderate temperature. The exhaust from the engine being used in the heater, no expense is entailed for motive power.

CANADIAN IRON PIPE.

CANADIAN manufacturers of iron pipe take exception to the statements of the English gentleman, Mr. Walton, member of the Iron and Steel Institute, London, Eng., an interview with whom was reported in Hardware and Metal of October 7th. Mr. Walton stated that "at present there is no pipe over 1-inch butt weld made in Canada." This was certainly a mistake as the Page-Hersey Iron & Tube Company of Guelph are producing all sizes of pipe both black and galvanized at their works in Guelph. The sizes manufactured by them include everything between ¼-inch and 4 inches. Mr. Walton further stated "that all the boiler flues and lap weld pipes came from the United States." The reason for this is because the duty on the former is but 5 per cent. and on the latter 15 per cent. In addition to this all large pipe for mining purposes comes in free of duty.

Mr. Walton's views are liable to create misapprehension and if his announced intention of returning to Canada next spring to establish tube works for the manufacture of iron and steel pipes and tubes is based on the statements made in his interview it is evident that he has not correctly gauged the Canadian situation. There are at present three pipe mills in Canada and they have no difficulty in supplying the demand even when running at two-thirds capacity.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Canadian Air Warmer.

JAS. SMART MFG. CO., Brockville, have issued a small folder for distribution by dealers who handle their new Canadian Air Warmer for hard, soft, Souris or lignite coal, coke or wood. Sectional views of the Air Warmer are given illustrating the distinctive features of the apparatus, while a brief description of its workings is given with the cuts. Dealers who have not yet looked into the advantage of this line should send for a copy of the folder so that they may be able to introduce one or more in their district to be tested alongside other makes. If Hardware and Metal is mentioned samples of the folder will be sent to any address.

Never-Slip Clutches.

Ruger Manufacturing Company, Buffalo, N.Y., have sent Hardware and Metal a copy of their small booklet describing their new Never-Slip Clutch and will forward a copy of the booklet to any reader who mentions this paper in a letter of inquiry. Neat illustrations are given in addition to the reading matter.

Sweep Smelting.

A blotter and circular has been supplied Hardware and Metal by the Canada Smelting and Refining Works, London. The circular gives a description of the company's plant where all classes of metals collected in the sweepings of jewelry shops, etc., brass ashes, slag and other scrap metal are refined. The company buy in large quantities and will send further information to any inquirer who mentions this paper.

Independent Gas Heaters.

Independent Manufacturing Company, Cleveland, Ohio, have issued a handsome catalogue of twenty-four pages and cover, illustrating their "Independent" Gas Heaters, many styles being illustrated in the book. Natural gas is now being used in very large quantities in various parts of Canada, both for heating and cooking, and many American manufacturers are finding the Canadian trade worth reaching out for. The Independent line has for its distinct feature that of top radiation, the air being heated directly over the burner and transferred to the top through air tubes. The catalogue is one worth sending for, particularly at this time when natural gas is being developed in so many sections of the country. Any reader who mentions Hardware and Metal can secure a copy on request.

Hardware Shelving.

The J. D. Warren Manufacturing Company, Chicago, have just printed illustrations of their most recent designed cabinets and bases of the Warren hardware shelving, also including illustrations of the cabinets exhibited at the St. Louis World's Fair, many of which are printed in four colors, and in variety and numbers they furnish a most extensive assortment. Among them are a number of combinations of 25½ feet in length, arranged as their experience and judgment suggest, costing from $3 per lineal foot and up. They also have issued a neatly arranged and finely printed net price list of over 300 patterns of their own designs and manufacture of store fixings, which will be forwarded to any asking for same who mention Hardware & Metal.

Sterling Ranges.

The Ottawa Hardware Co., 105 Bank street, Ottawa, have sent us a booklet which presents in very readable form the virtue of the Sterling ranges. Monarch steel range, and Enterprise hot blast heaters. These lines are most seasonable at the present time, and the trade should not be slow to look into the merits of Sterling, Monarch and Enterprise goods before deciding on their Winter's stock. Mention Hardware and Metal when requesting this catalogue.

J. P. Clabrough & Johnson.

The latest catalogue of this well-known English firm has just reached us, in the form of a sixty-four page book, giving complete data and price list of their sporting and military guns, rifles, revolvers, etc. Extra heavy paper is used in the catalogue, thus ensuring attractive typography. The illustrations are copious, all showing the peculiar advantages of the guns made by this firm, which was formerly known as J. P. Clabrough Bros. Canadian dealers who wish to know more about these guns would do well to mention Hardware and Metal and ask for catalogue. The firm's address is Price street, St. Mary's, Birmingham, England.

Pointed Sharpness.

Under this head J. Wiss & Sons' Co., Newark, N.J., are publishing a nicely designed booklet of sixteen pages and cover. On the front cover is embossed the name of the booklet, and a shapely hand pointing out a pair of Wiss scissors. The various points of merit in a good pair of shears or scissors are carefully explained, and the processes necessary to turn out Wiss goods are described in plain language, illustrated by halftones showing men engaged in the detail work of the factory, in all the stages from welding to finishing. Send for a copy of this booklet, and mention that you saw notice of it in Hardware and Metal.

VANDERBILT COULDN'T SEE IT.

When George Westinghouse, the Pittsburg inventor, had completed his air-brake, he submitted it to Commodore Vanderbilt, with the object of installing it on the commodore's railroads. He was only 23. He was admitted to the great railroad manager's office and permitted to explain his mission while the commodore opened his mail. Occasionally Mr. Vanderbilt uttered a grunt merely to signify that he was listening to the enthusiastic recital. When the inventor paused, Vanderbilt was ready with his decision.

"Young man," he said, "do I understand that you propose to stop a train of cars with wind?"

Westinghouse admitted that was the fact.

"Well, young man, I have no time to bother with d—— fools," declared the commodore.—American Illustrated Magazine.

Everybody Delighted

Dealers who have installed Oxford Heating Systems are unanimous in their reports of all round satisfaction.

Architects and users alike praise the results, and the dealer is, consequently, enjoying the thanks of all parties interested.

Our Oxford ("B" series) Boiler has made a decided hit. The practical application in combination of some simple scientific facts, hitherto overlooked in Heater construction, has in the Oxford Boiler produced a most powerful and efficient Heating Apparatus.

It has many strong points of superiority, and its universal success is the best evidence of the truth of our claims for it. You can confidently say to your customers "Get it and you'll be comfortable."

Oxford Steam and Hot Water Radiators are a fitting complement to Oxford Boilers, and these, in combination, assure Beauty with Economy, Efficiency and Consequent Comfort.

"The Gurney-Oxford Book of Steam and Hot Water Heating Apparatus" explains many other points worth knowing. Send for it.

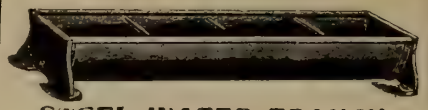
THE JOKE ON DUMAS.

Dumas "pere," who was proud of the prices he received for his work, was once boasting of the fact.

"Beyond a doubt," he remarked, "I am the best paid of living men of letters; I receive 30 sous a line."

"Indeed, monsieur!" said a bystander. "I have never worked for less than £5,000 a line. What do you think of that?"



"You are joking," responded Dumas, in irritation.

"Not at all."

"For what do you receive such rates per line?"

"For constructing railways," was the answer.—Harper's Weekly.

HARDWARE MEN: Our

STEEL WATER TROUGH
is a seller—something the average farmer has been waiting for,
We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.
We will make you an interesting proposition; so write us at once that you are open to consider the agency in your district. We appoint one representative only in all medium size towns.
It's worth having, believe us, so write for it to-day. STEEL TROUGH & MACHINE Co.
TWEED, Ontario Limited

Hardware Store Business Methods
Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.
The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.
Cloth bound, Price, postpaid $1.00

The American Hardware Store
A Manual of Approved Methods of Arranging and Displaying Hardware.
By R. R. WILLIAMS, Hardware Editor of the IRON AGE.
This book is descriptive of the best methods of accommodating and displaying the large variety of goods which are carried in stock in representative American and Canadian hardware stores. Copiously illustrated, and worth many times its cost to every progressive hardware dealer.
Cloth bound, 6¾ x 9¼. 576 pages. Price, postpaid. $3.00

CURRENT MARKET QUOTATIONS.

Oct. 20, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

HOLLOW-WARE

PRESSED, STAMPED, and MACHINE-MADE

ENAMELLED, TINNED, GALVANIZED and JAPANNED

We manufacture every description of Hollow-ware and we guarantee that every piece is made wholly on our own premises. Our average weekly capacity, is over 700,000 pieces, of Tinned, Galvanized and Enamelled ware. Our Enamelled ware is of superior durability and finish, and is guaranteed free from any poisonous substances.

Let us have your name for our Illustrated lists

The Welsh Tinplate & Metal Stamping Co., Ltd.

LLANELLY, WALES

WALKER CORK SCREWS

over seventy varieties to select from. Every one tested and guaranteed. Our large window display stand will help sell them.

Manufactured only by **ERIE SPECIALTY COMPANY,** ERIE, Pa. U.S.A.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

THE Universal Cake Maker

Mixes the batter for all kinds of cake easier, more uniformly and a great deal quicker than by hand.

Being entirely open the mixing process is easily watched, and flavoring, sugar, etc., can be added as required.

The bowl of the Universal Cake Maker holds four quarts and any less quantity can be mixed in it.

All parts are heavily tinned, including the bowl, which is made from one piece wrought steel.

"MAUSER" AUTOMATIC PISTOL

Self-Loading Magazine

Mauser. For 7.63 M/M cartridges with solid nickel or soft nose bullets.

RETURNED OCT 30 190

Rapid and safe, greatly reduced recoil.
Increased accuracy and range.
The Holster protects the Pistol from rust and dust.

This pistol is not a toy, but is made for heavy service.

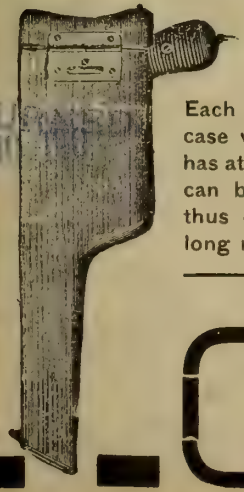
It is gun metal finish throughout, with a walnut stock and holster, and has a very attractive as well as useful look.

"The inventor terms it a self-loader, and the title is so far justified that it is almost as quick to charge the magazine with the 10 cartridges as it is to load one of the chambers of a revolver."

Lt.-Col. K. M. Foss, in the "PIONEER OF INDIA"

Top cut shows cartridges in patent clip, ready for loading.

WRITE FOR PRICES



We also carry the largest and best assorted stock in Canada of everything in the shooting line, including:

SALES LESSON III.

Enquirer convinced about the sturdy Dillon Strand Wires. Wants more evidence on the permanency of "Dillon" Hinge-Stays (Point No. 2).

Press the fence down again, asking enquirer to note the movement of the stays. He will readily discern that they neither bend nor break, but have absolute elasticity. Tell him Dillon Hinge-Stays are of medium temper, and, being properly hinged, are never affected by wrapping. Tell him that half the wire fencing in use is unsightly, after a year or so, because the temper of the stays is too high, rendering them completely subservient to what the "Dillon" is **for all time free from**—bent or broken wires.

A SQUARE DEAL FOR Square Dealers

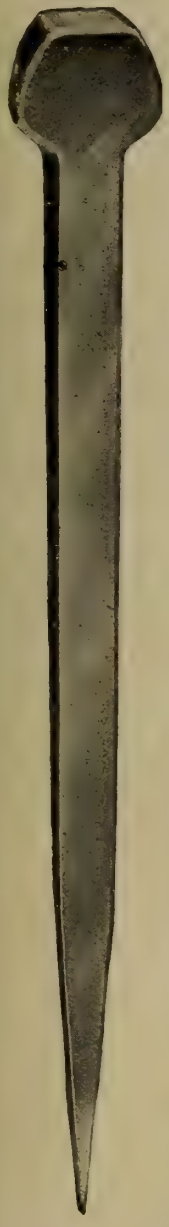
Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.



The Enterprise Manufacturing Co. of Pa.

New York Office, 10 Warren St.

Philadelphia, U.S.A.

San Francisco Office, 105 Front St.

A Horsenail

That has been "made in Canada" for forty years is what we offer you.

The "C" brand (which is our registered Trade Mark) on a box of Horse Nails, affords the purchaser our absolute guarantee that every nail shall be found perfect, or the box may be returned, or replaced at our cost.

Every nail is "hotforged" from the end of a rod of Swedish charcoal steel of a special quality, which is the best material known, or used in the world for the purpose of making horse nails. Our process of manufacture differs in important respects from those of any other maker in Canada, which, with the best quality of material, used by skilled employees of long experience, are reasons why the "C" brand Horse Nails are the best, and the standard for quality among its competitors.

We make only one quality, and have only one price, viz: 40, 10 and 7½% discount from our list, free on board cars or boat at Montreal, at which quotation any wholesale firm will execute your order. The "C" brand should always be specified in your orders, and no substitute brand accepted, especially at the same price.

Don't compare prices on horse nails—**compare quality**. The best quality always commands the best price, and is worth more to the consumer. Remember that the recollection of quality will remain long after the price has been forgotten.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices throughout the Civilized World**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

CORDAGE

This is a staple hardware article, and you, no doubt, keep a complete assortment in stock.

Did you ever stop to think whether you were handling the **BEST?**

Do you know that there **IS** a best in Cordage, as well as in everything else ?

The Consumers Cordage Co., Limited, manufacture every kind of rope used in this country, from twine to the largest hawser.

Our factories are the largest and best equipped in Canada.

As we buy **FIBER** in enormous quantities, we are able to command the best raw material in the world.

Our products are manufactured by the finest and most up-to-date machinery, under the supervision of expert labor, during the whole process.

The result is a product which cannot be excelled in quality, while reasonable in price.

This means

Fair Profits for You
Satisfaction for Your Customers

When you are stocking up, ask your jobbers for Cordage manufactured by

THE "BUMPER" CROP AND THE WESTERN TRADE

IN Western Canada during the weeks and months that constitute the critical period in the growth of the wheat crop the weather is by no means a mere commonplace subject of polite conversation. So much depends upon it that it is one of the most important topics and it is discussed in Winnipeg, not casually but seriously—on the street, in the business office, at the club, in the home, and always in its bearing upon the season's wheat crop.

"Our crops get on my nerves," remarked a prominent business man in Winnipeg to a representative of this paper one day in August. "Of course we can't get along without crops in this country but I wish I could forget about that wheat crop for a few hours each day. I can think of nothing else but wheat and rust scares. Every time the sky is cloudy during these days when we want bright sunshine I think of the wheat, and I begin to calculate the dangers of rust and the probable loss expressed in dollars and cents just as in the Spring reporters on the daily papers give full scope to their imaginations in calculating how many million dollars each rainfall was worth to the west." This man is not in the grain business, he is not a speculator in grain. The chances are that in all his life he has never bought or grown a bushel of wheat, but he is a wholesale man with large investments in a big business, with a great amount staked upon the prosperity of the country and he knows the importance to business men in all parts of Canada, east as well as west, of a "bumper" wheat crop in 1905.

Splendid Crop Reports.

Interest was by no means confined to the west. Eastern newspapers devoted almost as much space to "crop stories" as did the Winnipeg papers. Winnipeg newspapermen who act as correspondents for Toronto and Montreal dailies were never at a loss for news to send east during July and August. Crop stories, news and interviews were always acceptable and the papers paid the telegraph tolls without a murmur. And the east had good reason to be interested this year, for the Montreal and Toronto business houses had staked very much upon the success of the crop. Their accounts in the west are large and they are looking for payment from the proceeds of the wheat sales. Moreover, it is in the west that all big Canadian wholesale and manufacturing firms find a field for the expansion of their trade. A prosperous west means a ready-market during the coming year for commodities of all kinds.

Crop estimates differ according to the temperament, optimistic or pessimistic, of the man who estimates, but there is something in the bracing western atmosphere that breeds confidence in the present and future of the country and the optimists have a large majority with many country polling sub-divisions yet to hear from. Probably the optimists have had so much their own way in the discussion that the actual figures will be disappointing, but if so it will be because the over-confident predictions have led the general public to expect too much.

It will be remembered that the over-confident estimates of the population of Winnipeg by real estate men in that city led to a general impression that there were at least 100,000 people in Manitoba's capital. Hence there was keen disappointment a few months ago when it was found that the actual population is, in round numbers, 80,000—foolish disappointment when it is remembered that the population has actually doubled in four years.

Some Close Estimates.

But whether the crop estimates have or have not been too optimistic it is certain that the 1905 wheat crop is by very much the largest on record. Conditions have been unusually favorable and the area under cultivation is larger than ever before.

In an interview about two months ago Hon. R. P. Roblin, Premier of Manitoba and Minister of Agriculture, stated that he was willing to go on record with an estimate of 100,000,000 bushels. His position at the head of the Department of Agriculture in one of the three prairie wheat-growing Provinces gives Premier Roblin some exceptional opportunities to form an accurate idea of the size of the crop.

The Manitoba Free Press each year sends out during the critical period in the growth of the crop a corps of special staff correspondents and from their reports of conditions in all the wheat-growing districts of the west an estimate of the total crop is made.

If the Free Press correspondents err in the preparation of their reports it is not on the side of over-confidence. Their stories of rust last August were vigorously denied from certain districts which considered themselves maligned and in many instances there would seem to be good ground for the complaints. Certain it is that damage by rust this year has been infinitesimal.

Last year the Free Press estimate of the total crop was probably the closest made by any paper, consequently the estimate of that journal this year is entitled to due respect, and when it places the 1905 wheat crop at 90,000,000 bushels most people are prepared to believe that Premier Roblin's estimate of 100,000,000 bushels may be very nearly correct.

With unpardonable lack of respect for Professor Mavor the Swan River and other districts which in his report he classes as unfit for cultivation have produced large quantities of wheat, in many places the average production being 25 and 30 bushels to the acre.

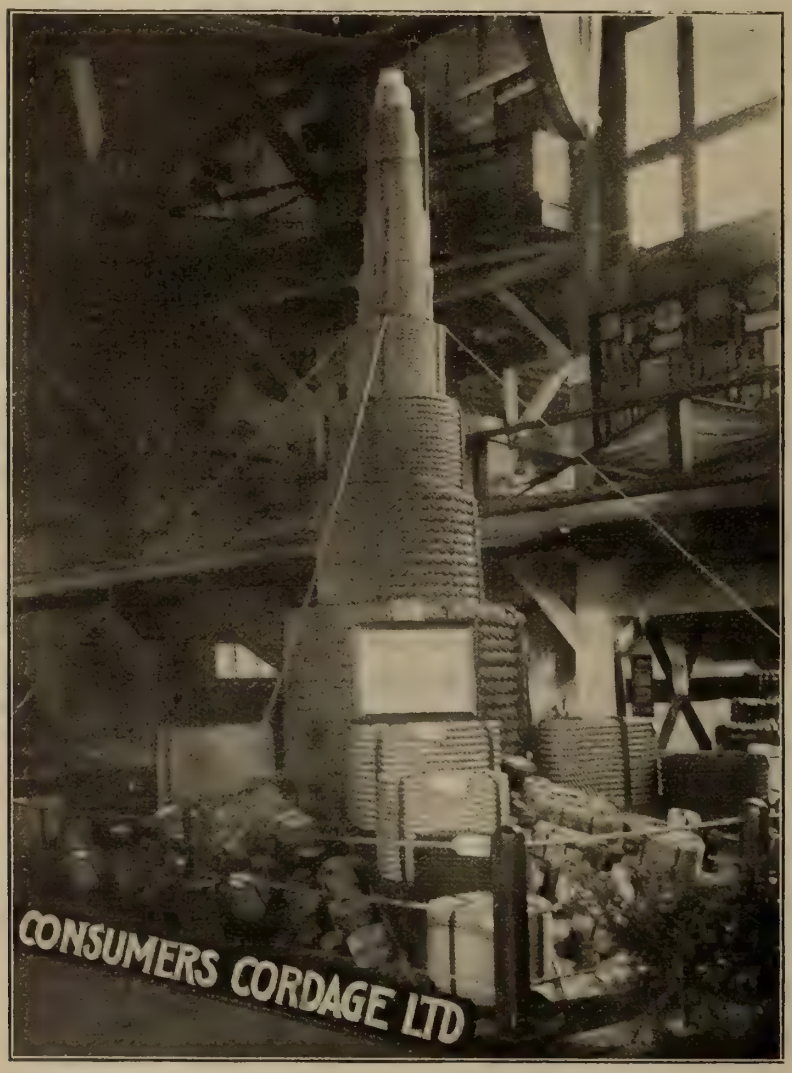
Now what does this mean to Canada? It means that during the next few weeks and months perhaps $70,000,000 will be paid to the western farmers for the 1905 wheat crop. The banks have been making every effort to provide the necessary cash and the railways the necessary rolling stock to handle this immense crop as quickly as possible. Thanks to our elastic and fluid branch bank system the banks have had little trouble and from the lack of complaints it would seem that the railways are satisfying the exacting demands of the impatient grain grower.

There was a time in the infancy of the C.N.R. and when the C.P.R. in the west was under less efficient management, when the western grain growers were loud in their complaints that the railways could not supply sufficient cars to handle the grain. But since the C.N.R. lines have been extended and the C.P.R. in the west has been under the capable management of Vice-President Whyte, a western man in whom all the west has absolute confidence, these complaints are seldom heard. The task is greater this year than ever before, but complaints are conspicuous mainly by the infrequency with which they are heard.

All Canada is interested to know what proportion of the crop the railways can handle before the close of lake navigation, for all Canada is interested in knowing the approximate amount of money the western farmer will have immediately available. How will he dispose of this ready money? Will he buy more land, pianos or automobiles with his ready cash, or will he pay his debts first and make his investments for profit or pleasure with the balance? This is the question in which all business men are interested and they all agree that the debts must be paid first.

The Obligations of the West.

Not in years has so much depended on a single crop. The obligations of the west are heavy; the country storekeeper has been carrying his farmer customers, the wholesalers and manufacturers have been carrying the retailer and they themselves have been supported by the banks. All are interested in seeing debts paid before any further land speculation is indulged in. The crop is large enough to pay off these debts and leave a surplus for investment. The wholesalers and retailers are determined to collect their outstanding accounts and if they can do so there is no doubt that the immediate net result of the 1905 "bumper" crop will be to place the prosperity of Western Canada upon a solid foundation.



The 1905 crop is large enough to pay all outstanding store bills and leave a handsome surplus in the pockets of the consuming public of the west. There is, therefore, an excellent market in the new country west of the Great Lakes for manufactured products of all kinds. Canadian, British and foreign manufacturers are well advised in looking to Western Canada for the expansion of their trade. The west wants the best that is made and in a prosperous year it is able to pay cash for what it receives. The encouragement of the spirit of enterprise among manufacturers and merchants in the east is greatly to be desired and cannot fail to meet with success and in the very near future reap

the richest rewards when the population and buying powers of the west are much greater than they are now. The advantages of "getting in on the ground floor" are obvious and they need not be elaborated upon. He is a rash man who would attempt now to set bounds to the development of the Canadian Northwest.

Probably no man is better qualified to judge of the possibilities of the Northwest than Dr. Saunders, the Director of Experimental Farms. In his well-known pamphlet on "Wheat Growing in Canada," he says, under the heading "Reasonable Prophecy":

"The total imports of wheat and flour into Great Britain in 1902 were equivalent in all to about 200,000,000 bushels of wheat. Were one-fourth of the land said to be suitable for cultivation in Manitoba and the three provisional Territories under crop with wheat annually, and the average production equal to that of Manitoba for the past ten years, the total crop would be over 812,000,000 bushels. This would be ample to supply the home demand for 30,000,000 inhabitants (supposing the population of Canada should by that time reach that figure) and meet the present requirements of Great Britain three times over." This estimate deals only with a portion of the west, and it leaves the large eastern Provinces out of consideration altogether. From this it would seem to be quite possible that Canada may be in a position, within comparatively few years, after supplying all home demands, to furnish Great Britain with all the wheat and flour she requires and leave a surplus for export to other countries.

With a rural population on the western plains in 1902 of about 400,000, over 67,000,000 bushels of wheat were produced. Add to this the wheat grown in Ontario and the other eastern Provinces and we already have a total of over 93,000,000 bushels. These figures are full of promise for the future of Canada as a great wheat-exporting country."

Prize-Winning Cordage Exhibit at Halifax Exhibition.

SOME SPECIAL NUMBERS.

THE Australasian Hardware and Machinery issued its Spring number on September 1st, it being a very well gotten up number, thoroughly representing the hardware and machinery trades of Australasia. The number is well bound in a red cover, and contains 128 pages of advertisements to 48 pages of reading matter, included in the advertising being one advertisement of twenty pages, the complete catalogue of an English and Australian firm. This advertisement shows bad taste, however, in the selection of the color of the paper, the advertisement appearing in black type on red paper, and showing up very poorly. The reading matter comprises some very bright and educational articles, in addition to illustrations and descriptions of new novelties which are presented to the trade in Australasia. The issue is, on the whole, a very creditable one.

The Ironmonger, London, Eng., issued its Autumn number on September 30th. On the cover is the reproduction of one of the finest hardware stores in England. The issue comprises 376 pages of advertising to about 80 of reading matter, and as the advertising includes many beautiful illustrations and colored inserts, the overplus of advertising makes the issue even more readable than if it were made heavy by a larger amount of reading matter. A peculiar feature of the English Postal law is that it allows publishers to insert catalogues and supplements of uneven size, one of the inserts in this number of the Ironmonger being a catalogue of over 150 pages, issued by Hobbies, Limited, of Deerham, England. The reading matter given includes many special features of interest at this season of the year, several of the articles being illustrated. About twenty pages are devoted to illustrating the latest novelties and movements in the special lines being introduced to the trade in Britain. The issue is printed on very fine and expensive paper, and the grey cover gives the whole volume a very neat appearance.

Another number of the Ironmonger, issued on September 30th, is the special "Iron and Steel Institute Number," this issue containing 96 pages of reading matter and 96 of advertisements, the former including a very comprehensive report of the recent convention of the Iron and Steel Institute of Sheffield. Portraits of the leading men connected with the institute are given, and many other illustrations are reproduced, to illustrate the various addresses and special papers read before the gathering. To any one interested in the metal trades this number is of particular interest, containing as it does a practically complete report of this important convention, together with tables giving statistics of the industry in England, and the description of several of the plants visited by the delegates.

The Beck Mfg. Co., Penetanguishene, is installing a Sturtevant dry kiln outfit for drying pail and tub staves. This apparatus consists of a large steel plate fan driven by direct connected horizontal engine and drawing the air through a heater.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Pretentious Lock Catalogue.

ONE of the most pretentious catalogues of the year is the Yale & Towne Manufacturing Company's No. 18, which has just reached us. The reader is instantly struck with the splendid binding, which is done in half cloth, the cover showing green background with gold lettering, while the back is of red cloth. Besides giving prices and illustrations of the extensive lines manufactured by this firm, the two hundred odd pages of the catalogue contain an instructive glossary and some interesting articles on such subjects as "Lock Primer," "Lock Picking," "Master Keyed Locks," and "Hand and Beveled Doors," which are taken from Mr. Towne's "Handbook of Locks and Builders' Hardware," for architects. All hardwaremen will be interested in this book, which will be sent express paid upon request. Kindly mention Hardware and Metal in writing.

The Crane Elephant.

Hardware and Metal has received from the Crane Company, Chicago, one of the Crane elephant desk paper weights issued by them in commemoration of the 50th anniversary of the establishment of the company. It is estimated that 50,000 of the elephants will be required to supply the trade. Readers of Hardware and Metal who are connected with the plumbing and steamfitting trades can secure one of the paper weights by mentioning this paper.

General Supply Catalogue.

The Canadian Fairbanks Co. are now at work on the first section of their new general supply catalogue. They expect to have the same ready for distribution in a month or six weeks. The first section will be devoted to pipe and steam tools and any reader of this paper who writes asking for a copy can secure one. As the supply may not be large enough to satisfy the large demand expected, readers should send their requests for copies in at an early date.

Inverted Gas Burners.

The latest developments in inverted gas-lighting are to be found in the new list of the New Inverted Incandescent Gas Lamp Co., Limited, of 23 Farringdon avenue, E.C., London. Amongst other things mention may be made of the lobby lamp, which is quite shadowless, and beautifully finished in green and gold. There is also a cluster lamp for outside lighting, a variety of ingenious adapters for converting existing fittings to inverted lighting, and a large collection of new designs in pendants, brackets, with choice glassware, silk shades, etc.

Pflueger's Fishing Tackle.

The Enterprise Manufacturing Company, Akron, Ohio, make the celebrated Pflueger fishing tackle, consisting of everything a fisherman needs, including hooks, flies, trolls, spinners, phantoms, reels, furnished lines, etc. These goods have a standard reputation and are known to fishermen the world over. To any dealer in sporting goods the company will send free, express prepaid, a 155-page illustrated catalogue, No. F23, and a metal fish sign and window transparency in 8-color lithograph.

Let Us Push Two Good Paying Specialties for You.

We are pushing *Sherwin-Williams Buggy Paint* and *Sherwin-Williams Enamel Leather Dressing* for the benefit of our agents and dealers. If you are one of them, you know that our methods bring profit and permanent trade—if you are not, write us today for particulars of the way in which we are increasing the demand for these goods in every locality.

S-W. Buggy Paint and S-W. Enamel Leather Dressing are as steady sellers the year around as any paint specialties the dealer can put on his shelves.

S-W. Buggy Paint is an exceedingly tough and durable gloss paint, in handsome, permanent colors. All owners of vehicles have constant occasion to use it in refinishing their buggies and carriages. Its durability makes its use popular on boats, porch and lawn furniture, and other surfaces exposed to the weather.

S-W. Enamel Leather Dressing is unexcelled for refinishing carriage tops, curtains, etc. It keeps them soft and pliable and fitted to withstand the effects of rain and mud.

The honesty and efficiency that your customers find in S-W. Products bring them back for other things you sell. Can you afford to neglect such an important point in your business?

Write today to our nearest office.

The Fairbanks Standard.

Vol. 1, No. 1, of the Fairbanks Standard has been issued by the Canadian Fairbanks Company, who intend to publish the little magazine monthly hereafter, supplying valuable suggestions and information in regard to new inventions and new installations by this company from time to time. The first number is a neat booklet of sixteen pages and cover, well illustrated and containing several interesting articles in addition to descriptions of several of the lines of goods carried in stock by the company. Any readers of this paper who desire to receive the Standard regularly should write mentioning this offer and the Fairbanks Company will be pleased to add their names to the mailing list gratis.

A FINE CORDAGE EXHIBIT.

At the Provincial Exhibition recently held in Halifax, N.S., the attention of everybody was won by the display of the Consumers Cordage Company, Limited. As is well known, this company manufacture every conceivable kind of rope, from twine to the largest hawser, and all of these lines were shown in the display here illustrated. Taking into consideration the variety of grades and the effective manner in which they are shown, it is small wonder that the authorities of the Exhibition awarded first prize for attractive display to the Consumers' Cordage Co., Limited.

C. P. R. NEW ATLANTIC LINERS.

Two new steamers are being built for the Transatlantic service of the Canadian Pacific Railway by the Fairfield Company of England, and the first will be launched in a few weeks. They will be named Empress of Britain and Empress of Ireland and will run between Montreal and Liverpool, but are built with a view to a possible transfer to the company's Pacific fleet. They are 550 feet long, 64 feet beam and of 14,-

500 tons, with twin screw balanced engines designed to give them a sea speed of 19 knots. The mail contract is now held by the Allan Line, as its two new turbine steamers, the Victorian and the Virginian, are faster than any of the present vessels of the Canadian Pacific Railway line, and the competition has led the latter company to improve its service.

RETARDING TRADE.

THE Canadian commercial agent at Leeds writes to the Department of Trade and Commerce that the operation of the Quebec commercial travelers' tax is causing him no end of trouble with the Yorkshire exporting firms, and is having a very retarding effect upon Canadian trade. The average exporter, he says, does not readily grasp the difference between a Dominion and a Provincial tax. They say: "Why do you impose a duty upon our goods, and at the same time impose a tax upon our travelers? It is unfair, and in direct violation of the spirit of the British preferential tariff." The agent remarks that British exporters having resident agents in the Province of Quebec are in grave doubt as to the position in which members of a firm would be if they went over to Canada to assist their resident agent. The large firms in the West Riding of Yorkshire pay their resident Montreal agents either by salary or by commission, and they think it very hard that, having such resident agents, the head of a firm desiring to take an occasional run over to Canada to assist his agent should run the risk of incuring penalties ranging from $500 to $1,000 for each offence.

IT IS SAFE

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

LOOK HERE for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

Hammer **$6.50**; Hammerless, **$7.80**. For sale by all Hardware and Sporting Goods dealers. Learn about them, anyway—it costs you nothing. If you will ask for it, we will gladly send you our bright little booklet, 'Shots,' together with our handsome catalogue

New York Office: 99 Chambers St.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

SUBMARINE IRON ORES.

THE Nova Scotia Steel & Coal Company of New Glasgow, Nova Scotia, acquired some time ago four and one-half square miles of submarine iron ore areas to the north of Belle Isle, Newfoundland. It has been found that the Wabana deposits from which the Dominion Iron & Steel Company and the Nova Scotia Steel & Coal Company have been drawing continue to the north under the sea. The Nova Scotia Steel & Coal Company is now mining ore in its Wabana areas at or below the sea level, and it has found that the ore at that point is of the full thickness of that worked on the land areas and of equal analysis. The company believes it is justified in assuming that a large body of ore exists in the submarine areas and estimates the quantity at 100,000,000 tons. It is believed that the cost of winning this ore will exceed by only a few cents per ton the cost of underground mining on the land. From the character of the roof and overlying strata no serious mining or engineering difficulties are anticipated.

ARGENTINE TRADE THREATENED.

Many Canadian manufacturers have been greatly exercised by the receipt of news from the Argentine Republic that it is proposed to levy a prohibitive duty on parts of agricultural machinery entering that country.

For years it has been the practice to sell machinery of this character on a close margin, relying on the profit in furnishing parts and repairs in future seasons to make the business profitable.

Consequently the serious nature of the proposed change can readily be understood. The United States Government officials have called for a report on the matter from A. M. Beaupre, the American minister at Buenos Ayres, with a view to addressing the Argentine Government on the subject, if on investigation it is found that the matter can properly be brought to its attention.

THE FIRST HORSESHOE.

HORSESHOEING is an old art, it having been begun in Italy about the eleventh or twelfth centuries, but greater progress has been made in it during the past twenty-five years than in all the time before that period. The first horseshoe was a thin iron plate having a rim on the outside which covered the whole ground surface of the foot. The shoes were held on by leather thongs fastened to the hoof and pastern. These were followed by a plate which had a rim held to the outside of the hoof by pointed hooks. The hooks were soon displaced by nails which had square heads. The Germans made the first horseshoes with a crease in them during the fifteenth century, and soon after shoes were made with calks. From these clumsy shoes to the present machine-made shoes was a work of slow growth, but perfection has not yet been reached by any means and the man who adds to the general knowledge of horseshoeing is a public benefactor.

CALCIUM STEEL.

A NOVEL material, likely to assume a high importance for the ceramical industries in case the statements made in regard to its properties are borne out even partially, is called calcium steel, says the Scientific American. This product is obtained from feldspar sand and a lime flux and is a compact, homogeneous, and plastic mass of great hardness, resisting oxidation and not affected by the influence of the atmosphere or of acids; it also is a poor conductor of heat and electricity. Its specific weight is 3.2, and its crushing strength about 2,500 kilogrammes per square centimeter. Calcium steel can be worked like a metal, and can be filed, bored, chiseled, polished, enameled, painted on, or otherwise decorated like glass and porcelain. For the manufacture of articles from this product two processes are available. After mixing the two components, viz., feldspar sand and lime, in a proper ratio and in a finely-powdered condition, the mass can either be molded cold and compressed like bricks and the articles thus obtained heated up to the temperature required for the combining of the components, or else the mass may be simply melted together and poured out like the metal in molds after having become liquid. The cast articles would have to be carefully annealed and cooled slowly.

Calcium steel is of a white color, but can be colored by the addition of metal oxides or the like. Its extremely favorable physical properties make it an excellent material for water conduits, gas pipes, and other underground piping.

The Jas. Stewart Mfg. Co.

WOODSTOCK, Ont., and WINNIPEG, Man. LIMITED

STOVES AND TINWARE

B. & B. OIL HEATERS.

OIL stoves are invaluable in the chilly, raw weather of Spring and Fall, when furnaces cannot be run to advantage and coal stoves make things a little too warm. They are also very popular for heating bath or sick rooms. The Glazier Stove Company, Chelsea, Mich., manufacture a popular oil heater called the Brightest and Best, which has been called a portable hot air register. The burners are said to produce perfect combustion of the oil so as to cause no trouble with smoke or odor. The tank is constructed so that the oil is said to remain cool. Thus explosion is made impossible. Absolute safety is guaranteed the user. Circulars will be sent on request if the name of this paper is mentioned.

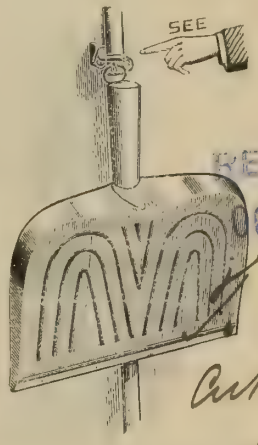
THE CREATION OF DRAFT.

ALTHOUGH the ultimate object of any means of draft production must necessarily be to create draft or velocity sufficient to provide the required amount of air and to carry off the gases, yet this portion of its work is almost infinitesimal as compared with the demand made for sufficient pressure to overcome the resistance of the fuel and the boiler. In other words, the ability to create sufficient pressure difference is the primary requisite to burning a given quantity of fuel, rather than the ability to move a certain amount of air. Draft-producing apparatus is not, therefore, to be based merely upon the total number of cubic feet to be moved per hour, as determined by multiplying the coal consumption by the allowance of air per pound of coal. If this were the case a low chimney or a large slow-running fan would meet the requirements. In reality the relatively immense resistances of fuel and boiler demand that the chimney or fan shall first be designed to create sufficient intensity of draft to overcome these resistances and to create the requisite velocity. This velocity must be such that if multiplied by the full area at which it is measured the product will equal the volume of air necessary for the combustion of the stated amount of fuel. The height of chimney or the diameter and speed of fan necessary to create the draft thus shown to be required having been determined, it is only necessary to make the capacity such as to accommodate the given volume of air. — From Treatise on Mechanical Draft by the B. F. Sturtevant Co., Boston, Mass.

AN IMPROVED ASH SIFTER.



THOSE who are in the habit of building their kitchen fires afresh each morning will be interested in a recently invented ash-sifting device. The device is arranged to permit of sifting the ashes without filling the surrounding air with dust. The improved sifter comprises a box consisting of the main or body and an upper auxiliary section. These sections are fitted together with a tight joint and are securely fastened with hasps and turn buttons. The upper section is provided with a hinged cover which, when closed, forms a dust-tight joint therewith. A hasp and turn button lock the cover in closed position. A handle on this cover provides means for carrying the device. Sockets are formed in the upper edge of the auxiliary section, at opposite sides, to provide bearings for a shaft. This shaft carries a tray which is rigidly attached to it. The cover of this tray consists of a screen of semi-cylindrical form. The shaft is operated by a lever thereon which carries a crank handle at one end. Normally the shaft is prevented from turning by studs at each end of the lever engaging lugs of the outside of the upper section. In use the pan of ashes which is to be sifted is placed in the tray and the screen cover is then fastened down, also the main cover of the device. Then the lever on the shaft is pulled outward so as to clear the lugs. The handle may now be rotated to invert the tray and pan of ashes, after which it should be rocked back and forth to sift the ashes through the screen. When the screen has been sufficiently rocked, the lower section may be disengaged to permit removal of the ashes. This body section is provided with two bails which may be swung over, when the body part may be readily lifted and carried in one hand. Legs are formed on the bottom of this section to space it from the floor and thus prevent scorching the floor or carpet when hot ashes are sifted. A patent on this ash sifter has recently been granted to Mr. Eugene A. Bagby, Bowling Green, Ky.

EAGLE MOP WRINGER.

A line that is meeting with a large sale throughout Canada is the combined Eagle Mop Wringer and Bucket, it being a most convenient contrivance and being made of the highest quality of materials. Dealers who have not yet looked into this line as a seller should ask their jobbers for information or send direct to the manufacturers, Eagle Cooperage Works, Circleville, Ohio, for printed circulars.

BROOM AND DUST PAN HOLDER.

E. E. Josef Manufacturing Co., Buffalo, N.Y., are the manufacturers of a little device which they are introducing through the trade which is intended to screw up in some convenient place, about 5½ feet from the floor, where the housekeeper can prevent her broom from getting out of shape by using the device and suspending the broom therein. Can also be used to securely hold the dust pan as well. They are made to be sold at a moderate price. The manufacturers will quote discounts on application.

STOVE ITEMS.

E. A. McTaggart, Hensall, Ont., has invented a new frying pan attachment.

* * *

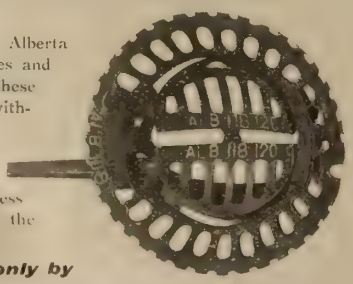
John E. Wilson has begun work on the extension to his foundry at St. John, N.B. Workmen are now putting down the foundation for a building 100 by 45 feet. This will be closed in this Fall, and other buildings will be erected next year, greatly increasing the output of the factory. Mr. Wilson intends among other things to go into the manufacture of stoves.

* * *

Elihu Thomson, of Evansville, Ind., has recently invented an electric stove suitable for kitchen use. The combination of the parts is said to be such that the whole interior of the stove may be maintained at red heat with a small expenditure of energy. It is said that without too great a cost, the stove may be kept available at all times for instant service. The stove is heavily jacketed externally with a layer of good heat insulating substance and is provided with a lid of the same construction. Within the jacket is a mass of refractory material, imbedded in which is a granular resistance material such as silicon.

"Alberta National Hot Blast"

For all kinds of Coal



THE double heater in the Alberta is made of one piece of stamped steel securely rivetted to body. The flue around the fire-pot is gas-tight. An entirely new way of hanging the fire-pot does away with the usual legs. A patent has been applied for on all the above features, so that our customers will have exclusive control.

No smoke when firing up. The swing top is provided with a cover for the kettle. The hot blast draft enters through feed door and allows the hot air to be spread over the top of the fire, burning the gases.

We are fitting up the Alberta this year with duplex grates and annular shaking ring. These can be taken out in pieces without removing the fire-pot.

The fire-pots also have been made nearly straight, giving larger capacity and less trouble from holding up the clinkers and ash.

THE STEEL RANGE

There is a constantly increasing demand for Steel Plate Ranges.

No stove selling establishment is now complete without a first-class steel range on the floor. The

OXFORD CHANCELLOR

is a very satisfactory steel range and should be in your stock. It is made of the best quality steel sheets, to which is closely riveted an interlining of asbestos millboard.

The oven is very roomy with drop oven door.

It burns either soft or hard coal or wood, as desired.

For soft coal burning, cast iron fire-box linings are supplied throughout.

For wood burning the fire-box is fitted with modern dump centre grate and is very large, with extra large door.

Hot water reservoir of planished copper is detachable.

Everything that goes to make a durable, satisfactory and easy-selling range is in the Oxford Chancellor.

We also manufacture cast iron Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

Our Safety Burner

The ALUMINUM OIL HEATER

Sales over the million mark solely through superior merit

Explosions are impossible in the Aluminum Oil Heater, because perfect ventilation and perfect combustion are secured by the liberal air passages on all sides of the wick and oil fount—see that safety burners solid gallery, solid flame-spreader, no perforations there to clog up. No other oil heater has this grand safety burner.

No direct contact between oil fount and wick—a small tube feeds the wick only as much oil as it can take up instantly.

And the Aluminum Oil Heater is handsome in design and finish, thoroughly well made, and the only oil heater which can and does radiate the heat in every direction. Heats by radiation as well as by circulation. Get your orders in early—the demand is swelling larger and larger every week.

We guarantee every one.

NEW ADVERTISEMENTS.

Alabastine Co., Paris, Ont.

CUTLERY AND SILVERWARE.

A WHOLESALE jobbing house which deals extensively in cutlery and hardware, was recently asked by a Hardware and Metal representative as to the condition of this branch of the trade at present. The answer was that an increasing number of hardwaremen were adopting these lines from season to season and, from present indications, it would seem that the approaching Christmas trade will be a record breaker in this respect.

Much greater attention than formerly is now being given to cutlery in all up-to-date hardware stores. Particularly in the west there is a strong demand for the better grades, except, of course, for shanty purposes, where finish is not particularly essential. One of the great advantages possessed by fine cutlery is that it is always saleable. Patterns do not change to any appreciable extent, so that it entails no ultimate loss to carry over a stock.

In this connection it is interesting to note that safety razors are taking a firmer hold on the market. All grades and nearly all makes are selling well, but the more desirable lines are those with a number of cutters. Safety razors are no longer an experiment as part of a hardware stock, but they are sufficiently new to be an innovation in most of the country hardware stores, and it would be a wise thing for dealers with a high class trade to try selling them this Christmas. We are confident that they would be pleased with the results.

In silverware it is seen that many hardwaremen are rapidly working up a good trade in plated flatware—forks, spoons, and knives. There is also an increasing sale for such specialties as berry spoons, pie knives, coffee spoons, butter knives, sugar shells and sugar tongs. In fact, as the profits are good, the hardware trade is taking up all kinds of plated ware to a really large extent. It is stated that in this line at any rate the jobbers are able to give their customers prices which will enable them to compete successfully with the catalogue houses.

If there are any of our readers who have not given this matter their consideration, we desire to bring it to their attention as a means not only of making good profits but also of attracting the best class of trade.

VALUE OF REPUTATION.

QUEER thing, this reputation. It takes toiling and moiling to get it —takes singleness of purpose and capacity to resist temptation to cheapen, but once you've got it its value is transcendent and can't be computed in dollars or cents. How infinitely better it is to build on a foundation of quality and worth rather than to chase the will-o'-the-wisp of cheapness, which leads you into bogs and swamps. "But my trade won't pay the price," wails some timorous soul. Your trade, dear merchant, is what you make it. If you insistently talk quarter, ten and five-cent brooms, and five-cent brushes, and ninety-nine-cent apples, and fifteen-cent oranges, how in the name of sense can you expect your trade to ask for anything else? Try the other. Talk quality, emphasize worth, lay stress on inherent goodness, and watch the result. Cut loose from cheapness, for you are leaning on a broken reed that will give you a bad fall one of these days. Profit and prestige lie in selling good goods. Is any feeling so all-satisfying as the consciousness that your name stands for the best?—for quality?—for blown-in-the-bottle goodness?—for stamped-on-the-bottom worth?

The successful men are those who have talked quality. There are a number of businesses in Toronto right under the nose of the large departmental stores making anywhere from three to ten thousand dollars for their proprietors, and they are only having about half the worry of the price cutter who usually finds it difficult, even with a larger turnover, to make his business show a net profit of more than one thousand dollars.

THE QUEBEC TRAVELERS' TAX.

WESTERNERS are accustomed to think that their part of the country is monopolizing "the growing time," and to scoff at the pretensions of the east, while, as a matter of fact, the Province of Quebec is also progressing very rapidly at this time. The northern country, with its fine timber and fertile lands, is now being opened up by the Provincial Government, so that a vast expenditure of money is being made for colonization purposes. Reforms in the educational system are also under way and the Government are giving more practical encouragement to agriculture than ever before.

Under these circumstances the public purse is being very heavily drawn upon and the Government is face to face with a financial crisis. Owing to unwise expenditures made and subsidies granted by former cabinets, the debt of the Province now amounts to twenty-six millions, and the fixed interest charges are one million seven hundred thousand dollars. As the revenue is less than five millions, it will be seen that only about three millions are at the disposal of the Government to devote to education, colonization, agriculture, etc.

This, then, is the condition of affairs which caused the imposition of a three hundred dollar tax on all travellers for non-Canadian firms doing business in the Province. It was expected that the revenue thus derived would do much to meet possible, nay probable, deficits, but nearly all the interests affected have put forth a strenuous opposition to the tax, the effect of which has, beyond doubt, been to cripple trade.

During the past fortnight deputations from the Canadian Manufacturers' Association have waited upon the Provincial Treasurer and the Cabinet meeting as a whole, to impress the views of this body upon the Government. An announcement was then made that the tax might be reduced to one hundred dollars, but the association sent another deputation to oppose not only the amount, but also the principle of the tax. Very little encouragement was given them and the final outcome is dubious.

That the Quebec Government has need of an increased revenue is admitted on all sides, but any attempt to raise this by putting shackles upon trade and interfering in spirit, if not in letter, with the rights of the Federal Government, must be deplored. To cope with these difficulties The MacLean Trade Newspapers put themselves on record as advocating an increased Provincial subsidy, which, under the circumstances, seems to be the only way of obviating these odious interferences with the rights of commerce.

MACHINE TOOL EXPANSION.

THREE Canadian machine tool firms have shown great energy and enterprise within the past month in taking steps to increase their output very considerably. These are John Bertram & Sons Co., Limited, Dundas, the London Machine Tool Co., London, and the Jenckes Machine Tool Co., Sherbrooke.

At the Bertram works a new foundry is now under way which will be one of the largest in the country, to be equipped with all the modern devices known, and will facilitate increasing very materially the already large output of this growing concern.

The London Machine Tool Co. have already given contracts for the construction of a new plant at Hamilton. They have bought eight acres of ground and are erecting at present a machine shop 250 feet long, 140 feet wide, a portion of which is saw-tooth construction. This building is to be ultimately extended to 400 feet long.

After due consideration as to whether they should extend their plant at Sherbrooke or build a new one it was decided by the Jenckes Machine Tool Co. to erect a new plant at St. Catharines, Ont., this place offering various advantages, important amongst which was lower freight rates. The new works are in course of erection and it is expected to have them in operation by the end of the year.

DEATH OF JOHN MILLAR.

ON Saturday evening, October 21st, after a long and painful illness, Mr. John Millar died at his late residence, 99 Rose avenue, Toronto. He was buried in the family plot in St James cemetery on Monday afternoon.

Born at Aberdeen, Scotland, in 1843, the son of an officer of the Cameron Highlanders, his earliest recollections were of Gibraltar, where his father's regiment was stationed in his boyhood His father, having been appointed a captain in the Royal Canadian Rifles, emigrated to Canada, and in 1855 Mr. Millar began an apprenticeship with Chown & Co., tinsmiths, at Kingston, Ont., serving with them for seven years. His apprenticeship completed, he commenced business for himself in London, Ont., in 1863. From 1870 to 1875 he was engaged in the business of oil refining and then resumed his stove business at London, continuing there until about 1886, when he removed to Toronto. About 1887 he accepted a position with the J. F. Pease Furnace Co., and, with the exception of three years spent in Chicago, remained with them until his enforced retirement from active work early in 1904. During the last five years of his connection with the Pease Company Mr. Millar occupied the position of head of their engineering department. He first became prominently known in the heating trade about 1888 when in competition with a large number of engineers he won the first prize for a complete set of heating plans in a contest by a well known trade journal in the United States. Since that time he was a frequent contributor to trade publications, his articles being distinguished by clearness and direct, practical information, helpful to the trade and singularly free from all mystifying technicalities. He thus became widely known to the heating trade both in this country and the United States and was greatly esteemed as a careful, practical and reliable engineer, and while eminently conservative, he possessed in a marked degree that fertility of resource which is an absolute essential to success as an engineer.

The Late John Millar, Toronto.

Mr. Millar married in 1865, Annie, youngest daughter of the late William Rowland, dry goods merchant, of London, Ont. Besides his widow, he leaves five sons and three daughters, Messrs. Harry D. Millar of Cleveland, Louis Millar of Chicago, and Rowland J., John M. and Arthur Millar, Mrs. W. A. Brophy and the Misses Beatrice and Katie Millar, of Toronto. He is also survived by two brothers and two sisters, David Millar, of Toronto, and Robert D. Millar, Mrs. John Cameron and Mrs. D. A. McDermid, of London, Ont.

While it was as a successful engineer that Mr. Millar was best known among the heating trade, those who had the good fortune to know him intimately mourn the loss of a true friend and a noble character. Modest and retiring in his disposition, he was devoted to his family and his home life was particularly happy and admirable. Among his business associates he was loved and respected by all. Possessing always the absolute confidence alike of his employers and those who worked beside him through a long term of years, he was especially esteemed by the "boys" who have grown up around him and to whom he was always ready to give a helping hand and the benefit of his ripe experience and large store of information and helpful advice. Among those with whom he came into competition he was everywhere respected because of his invariable courtesy and manliness and the high standard of honor which he invariably maintained and which was evident to all with whom he came in contact. Kind and considerate, he was also a strong man with the courage of his convictions, who possessed the spirit of his Highland ancestors and was never afraid to do the right thing as he saw it.

And when he came to the long struggle with the incurable and painful disease that caused his death he met it in a manner that was characteristic of his whole life—with marvellous patience and resignation and a fortitude worthy of the noble-hearted Christian gentleman he was.

MONTREAL RETAILERS ORGANIZE.

STRONGLY supported by trade newspapers and even urged by wholesale houses, the retail hardware dealers of Montreal have finally organized, under the name of "The Association of Retail Hardware and Paint Merchants of Montreal."

The primary object of this new association is to protect its members against the slaughtering of prices, and the retailing of goods by wholesale houses. Owing to the diversity of interests in the Montreal retail hardware trade, and the lack of sympathy between the dealers, there has been very little uniformity of price—a circumstance which has been disastrous. But the determination to make common cause against their difficulties has at last brought about an understanding between the retail merchants, with the result shown above.

On the 4th of October a meeting of the interests involved was held in the rooms of l'Union Commerciale, those present including the most prominent hardwaremen in the city.

The chair was taken by M. Francois Martineau, while M. J. A. Beaudry acted as secretary pro tem. Mr. Martineau explained the objects of the meeting, which were first to decide whether the time was ripe for a revival of the Association of Hardware and Paint Dealers, and second, whether the association should affiliate with the Association of Retail Merchants of Canada. After a discussion in which many of the gentlemen present took part, it was resolved

to reorganize the Association of Retail Hardware and Paint Merchants of Montreal, and to affiliate with the Retail Merchants' Association of Canada.

The election of officers was then proceeded with and resulted as follows: President, Francois Martineau; vice-president, L. J. A. Surveyer; second vice-president, David Dripdale; treasurer, F. C. Lariviere; secretary, Jos. Versailles.

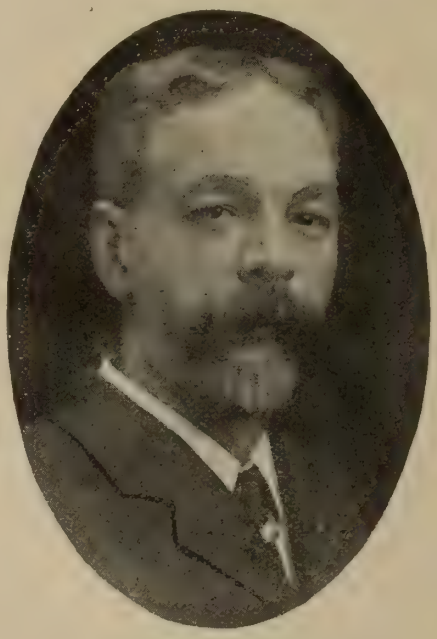
With this strong executive the association will no doubt have a most useful existence, and it is to be hoped that the retail hardwaremen all over Canada will follow this example and organize a national association.

THE GOLDEN WEST.

ALL attention is now directed to the Great West and its enormous crop, and naturally so, as reports from all parts point to the greatest grain yield the west has ever seen. The west, however, is only in its infancy, and greater things may be expected in future years. The average yield in Southern Manitoba, where this paper's representative is now traveling, is 25 bushels to the acre; in some places it is as high as 45 bushels. This means a big increase in business to the merchants of the west. The merchants have been carrying the farmers for some time, enabling them to buy more land and machinery, and there is many a hundred dollars' worth of goods out on credit which will now be turned into cash along with increased business.

The credit business has reached enormous proportions in Western Canada, and the merchants are now making a determined and combined effort to bring it to a cash basis. The Manitoba Retail Merchants' Association are doing a lot of good in this direction, and if their resolution to do a cash business between the 1st of November and March is carried out, it will help much to bring the merchant to a better position financially. Some merchants are doing an entirely cash business with good results, while others claim it is impossible to carry on a cash business in the west.

* * *



One of the strongest advocates of the cash business is A. E. Code, of Morris, Man., who has been doing a strictly cash business for over a year now, and says it is a great success. He hasn't lost any trade; he knows exactly where he stands, is not bothered by keeping books, and is free from the worry that a credit business always involves, and is also able to sell at a lower figure, which has materially increased his business. Our readers are soon to have the benefit of Mr. Code's experience, as he has been induced to write a series of articles on these lines, which will no doubt be very interesting to the trade in general, and especially to those in sympathy with this movement.

* * *

Travelers are as thick as bees in all parts of Manitoba and the west, and are all doing a fine business. Merchants are all stocking up for the Fall and Christmas trade, which should be a record breaker. There is a tendency all along the line to purchase the better class of goods, and merchants say there is a bigger demand for the high-class article than formerly, which, of course, comes with the increasing prosperity.

* * *

The MacLean Publishing Co.'s papers were to be found in nearly every store, and it was great satisfaction to hear the many complimentary things that

J. A. Lindsay, Winnipeg, Man.
Secretary Western Retail Hardware Dealers' Association.

are being said as to their value and assistance in carrying on an up-to-date and progressive business such as you find in Manitoba and the west.

In conversation with Bertram J. Durrell, who sells paint for Geo. Stephens & Co. and, by the way, is booking large orders, he said that he saw Hardware and Metal everywhere he went, and it was referred to more than any other paper of its kind in the west. Although we have always claimed this, we like to hear others say so, and specially from one so well acquainted with the trade in Western Canada.

The James Smart Manufacturing Company, Brockville, have secured contracts to heat and ventilate the Presbyterian Churches at Harrow and Kingston.

RESIGNATION OF J. A. LINDSAY.

HIS legion of friends in the hardware trade not only in Western Canada but also in the east will be sorry to read of the resignation of J. A. Lindsay, who for so many years has been in charge of the retail business in Winnipeg of the J. H. Ashdown Hardware Co. Mr. Lindsay's intended resignation has been no secret for a long time to his friends, as his health has not been of the best. Close application to business for so many years has injured his health and a rest has become imperative. Mr. Lindsay had intended resigning his position a year ago but when the disastrous fire occurred in October of last year his loyalty to his firm kept him at his post another year until the business should be put on a normal running basis again. During the year that has passed since the fire the handsome new Ashdown block has been erected and Mr. Lindsay feels that he can now tender his resignation. He will be succeeded in the management of the business by James Law of Calgary.

To Hardware and Metal Mr. Lindsay laughingly remarked that he had nothing in view for the future except to put his feet in slippers and enjoy a rest.

Mr. Lindsay has been president of the Western Retail Hardware and Stove Dealers' Association since its organization about fifteen months ago and if his retirement from active business involves his resignation of that position at the next meeting it will be a matter of deep regret to the western retail hardware trade whose interests he has served so faithfully.

THE CARE OF RIFLES.

RIFLES should be well oiled before being laid aside for any length of time or while laying in the dealer's show cases. This will not only keep the action in perfect order, but will preserve the finish of the arm.

After a day's shooting the barrel should be thoroughly cleaned until perfectly bright, and then oiled well with vaseline or gun grease.

If a rifle is well taken care of very little trouble will be experienced with "leading."

If the barrel should be leaded, plug up one end and pour in quicksilver. As this is rolled backward and forward in the barrel, the lead will unite with the quicksilver, and in this way be wholly or nearly all removed.

Never try to clean out lead with emery or other gritty substances, and never try to enlarge calibre of your rifle, this work should always be done at factory.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 58.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Bright Staples are now being quoted at $2.50 in 100-lb. lots.

Galvanized Canada Plates have been advanced 52's to $4.00, and 60's to $4.25.

Galvanized Sheets are stronger, advances having been made in Queen's Head and Gorbal's "Best Best."

Black Sheets have experienced a rise. 28 gauge has been advanced .10, and other guages .05.

Old Rubbers are stronger and now command 6¾c. to 7c.

Iron Pipe is now being sold at new discounts, showing an advance in price.

Summerlee Pig Iron has advanced sharply to $20.00 and $20.50.

TORONTO.

Canada Plates are now subject to new list quotations which show an advance of 25c.

Galvanized Sheets have also advanced 25c. as shown in the new list.

Pig Lead shows a 10c. increase, and is now quoted at record high figures.

Crude Petroleum has advanced 2c. on all lines.

Plumbing Supplies. A general revision is to be made next week, and some advances are likely owing to higher prices of such metals as iron, copper, brass and lead.

WINNIPEG.

Linseed Oil has dropped 3c.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 27, 1905.

THE touch of cold weather during the week has given the needed impetus to trade, and Fall goods are now going out in great volume. Some of the wholesale hardware merchants here have been forced to engage extra help in their shipping departments in order to keep pace with the increased business.

Shelf goods have become much more active within the past few days, but the chief demand has been for snow shovels. The trade is unanimous in realizing that the season for these goods is very close at hand. All other seasonable articles are also selling well, with perhaps special emphasis on cutlery and sleigh bells. It is worth noting that every season a greater demand is now shown for the more expensive grades of cutlery, though the preference for different brands varies in different districts.

Horse blankets are now pretty well in the hands of the trade with the result that orders will be somewhat sluggish until the sorting season is at hand. Rifles, also, are now being ordered only occasionally, as the trade are well stocked up. Retailers, however, report a brisk demand.

The only change of consequence in the wholesale lines is in bright staples, which are now selling at $2.50 in hundred pound lots.

Axes—Good sized orders are being filled almost daily. We are quoting: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles — We still quote: Axe handles No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Sales are increasing and good prices are being commanded on standard makes. Our quotations are: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—Prices are unchanged. The following figures still rule the market: Cold blast, $4.50; No. 0, Safety, $5.00.

Rivets and Burrs—Trade is quite active, owing to an impression that prices will soon be amended. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—A steady demand that has been in evidence for some months is yet maintained We quote: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—Large orders are being sent out in all directions, thus maintaining the steady tone natural to this season. Our quotations are as follows: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—An uneasy feeling in the trade that prices will soon be withdrawn has led to an active demand at the following prices: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—We are still quoting: $2.20 per keg f.o.b. Montreal.

Horse Shoes—These goods are remarkably active now as blacksmiths all over the country are stocking up for the winter trade. We quote as follows: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Rifles are being shipped in fair volume still, but sorting orders for ammunition are perhaps the feature. In this section of the country snowshoes and tobogans are now being stocked in anticipation of a splendid winter's trade in these lines. Our quotations are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Business continues satisfactorily active. Prices are unchanged.

Cordage—Orders which are now coming to hand are mostly of the sorting variety. The conditions generally are such as to keep prices firm.

Cement and Firebrick—There is no great activity manifest so far as large jobbers are concerned, but there are lots of small jobbing contracts which call for considerable cement of all kinds. We still quote: as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags; $2.05 in barrels in round lots.

Coil Chain— We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—The season has been somewhat unsatisfactory and lacking the activity of former years. We quote: Little Star, $4.85; Hudson, $5.00; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—This is a line which is very strongly in evidence in each day's orders. We still quote from 25c to $2.50, according to quality.

Sleigh Bells—Business is exceedingly active for all grades. We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2;

team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined$12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—This line is becoming more popular with the hardware trade. Snowshoes are very strong at prices ranging from $15 to $35 per dozen pairs, according to quality.

MONTREAL WINDOW GLASS.

Conditions remain much the same as last week. Arrivals are few and as the close of navigation approaches the prospects for getting in a good supply of British and Belgian glass are rapidly diminishing.

The cargo of the wrecked Virginian has been regained, but the glass is, of course, badly damaged, and for the greater part, unsaleable. It is thought that bids for this stock will come only from the largest jobbers, who can repack the boxes before shipment. On the whole very little relief has been experienced by the arrival on the local market of the Virginian's cargo.

One effect of the scarcity of British and Belgian glass has been an awakening in the demand for the article manufactured in the United States. This is being sold here at a price but slightly in advance of the cost of European glass laid down in this city, and the makers are prepared to fill orders for any specified size. We quote: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75, seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, October 27, 1905.

LAWN mowers and shooting material are the features of the week's market, practically every order being received by the jobbers including rifles and ammunition in fair quantity. Hunting is becoming more general and the shot gun is giving place to the rifle.

Lawn mowers are subject to open prices for 1906 and the figures we quote this week show a decided reduction on last year's prices. The business being done is not exceptionally large, however, although the low figures encourage the retailer to book his order early.

Cutlery continues to have a large sale, especially as some dealers will not buy ahead to any extent, relying on sorting up when the retail trade demands it. Sleigh bells are selling well and weather strip is being called for more frequently.

With the exception of lawn mowers prices continue firm and unchanged.

Lawn Mowers—Prices for 1906 are being cut up badly in the open market now prevailing. This is bringing some extra business on booked orders. We quote: Woodyatt, 12 to 20 inch, $3.95 to $5.00; Woodyatt ball-bearing, 12 to 20 inch, $5.60 to $7.45; Star, 12 to 16 inch, $2.75 to $3.05; Daisy, all sizes, $2.50; Philadelphia, King Edward and Grass Boxes, 50 per cent off 1905 quotations.

Sporting Goods—Rifles are having an enormous call, being included in every order sent in. Ammunition and shells are also in very active demand.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chains are selling well. Our quotations are: 1-4 inch, $6.50; 5-6 inch, $4.45 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Trade continues active, manufacturers being rushed to make shipments of goods ordered. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Barb and Coiled Spring Wire—Some wire is still being sold but the volume of business is decreasing. No change in quotations.

Wire Nails—Demand continues very keen, but quotations remain the same.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Axes—Trade is increasing and the outlook for a large trade in both handles and blades is excellent.

Horseshoes—Prices continue unchanged with the outlook for business excellent. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—Blacksmiths are ordering in large quantities and dealers have no complaints to make.

Cutlery—Trade continues very active and the season's business bids fair to be a record one. Sorting orders are coming in freely.

Skates and Sleigh Bells— Merchants are ordering well, particularly for sleigh bells.

Screws—Demand is strong and the market is very firm.

Rivets and Burrs—The possibility of higher prices is giving an impetus to trade. Prices remain as before.

Bolts and Nuts—The high prices of iron has made prices very strong, but no advance has been made as yet.

Cordage—Sorting orders are being received. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—The season's demands have been very heavy and there is little of a surplus on the market. As the bulk of the business is done, however, there is talk of a fall in prices on the higher priced brands. For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—Business is picking up and prices continue as before. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Business is active, the heavy building being done calling for a large quantity of goods. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool—The market in these lines has made no material change since our last report. Demand continues very active with supplies coming in about equal. Expectations are general that a change in the situation is imminent which will bring the market to a more stable basis.

We quote:

Hides, inspected, No. 1 per lb.		0 12
" " " 2 "		0 11
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected		0 14
" " No. 2		0 12
Lamb skins and pelts, best city slaughter		1 00
Horse hides, No. 1	3 00	3 25
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, per lb.	0 15½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, October 27, 1905.

HIGHER prices in a number of metals have been reached this week, with the market holding most firmly at the advanced figures.

As was announced in our last issue, new lists have been issued by the jobbers, showing advances on nearly all heavy goods. Conditions all around seem to indicate that these new prices

Wholesale Merchants
Ormidale Block, Vancouver, B.C., and
Liverpool, England
Direct Importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc, etc

will not only be held firm at the new quotations, but may even be advanced still further before long.

Copper remains unchanged in price and the shortage is still noticeable. There is no indication of any break in the near future at any rate.

Tin is again firming up with prospects of an early increase in price. Tin plates have again been advanced to importers, which gives added strength to the figures here quoted.

Pig lead has once more been advanced to the importers, but jobbers' prices have not been changed. This goes to prove, however, that the top price for lead has not yet been reached and we may expect more records to be broken by this metal, before the end of the upward movement is reached.

The pig iron situation is decidedly interesting just now The remarkable buying of Scotch pig iron is being wonderfully maintained with the result that Old Country producers have advanced the price during the week 8 to 10 shillings. Prices from now on will keep going higher, especially as stocks in the hands of Canadian dealers are said to be light. It is confidently predicted by men most closely in touch with the market that the high prices asked two or three years ago will be reached before the present situation is relieved. The effect of such a condition will inevitably be increased prices for all kinds of manufactured articles produced from iron, as raw material.

Canada Plates—As we predicted last week an advanced price has been set for galvanized plates. Our prices now are: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $4.00; 60's, $4.25.

Copper—The situation is unchanged, with a shortage still apparent. Our quotations are: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—Shows a disposition to reach higher prices before long. The market is growing considerably firmer. We are quoting: 36c to 36 1-2c. per pound.

Pig Lead—It is expected that still higher prices will shortly be demanded for this metal as import prices have already advanced again. Our prices are: $3.85 to $3.95 per hundred pounds.

Boiler Tubes — We quote prices as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c., 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, per foot net.

Pig Iron—We are this week quoting an advance in Summerlee to $20 to $20.50. Indications are for higher prices right along, throughout the winter. We quote:

"Disc," No. 1	$16.50	delivered Montreal.
"Dom.," No. 1	17.50	" "
Usual difference in price for lower grades.		
Ferrona No. 1	$18 00	delivered Montreal.
" No. 2	17.50	" "
" No. 3	16 50	" "
" No. 4	16.00	" "
Londonderry	$18.75 to $19.25	" "

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—No further change in price has been reported beyond that mentioned two weeks ago. We quote: Sleigh shoes, $1.97 1-2, tire, $2.12 1-2; spring, $2.75; toecalk, $2.67 1-2; machinery iron finish, $2.07 1-2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash 30 days.

Cold Rolled Shafting—Our quotations are: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Several advances have taken place during the week. The demand is very brisk and the market firm. We quote: as follows: Queen's Head, 28 gauge, $4.25; 26 gauge, $4.00; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.65; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.45; "Windmill Best," 28 gauge $3.95; Sword and Torch 28 gauge $4.05; in less than case lots 25c. extra.

Black Sheets Advances have been declared in nearly all guages. We quote: 28 gauge, $2.25; 26 gauge, $2.15; 22-24 gauge, $2.05; 19-20 gauge, $2.00; 8-10 gauge, $2.30.

Antimony—No further weakening has occurred sufficient to lower prices as reported last week. We give the following prices: 14 1-4 to 14 1-2c. for Cookson's.

Tin Plates—Big advances have lately been made to importers, but we are still authorized to quote: Cokes, $3.75; charcoal, $4.00.

Ingot Zinc—Prices remain as before, with the market exceedingly steady. We quote: 6 3-4c. to 7c.

Bar Iron—Conditions are unchanged. We still quote: $1.87 1-2 base, f.o.b. Montreal.

Scrap Metal.—The iron market remains the same as before. There has been an advance in the American markets, but there is little here, for wrought iron, as the mills are using steel for nearly all the products which are in greatest demand. Cast iron on the other hand, has been sold pretty regularly and local stocks are small. The old rubber situation is curious and there are indications that the price cannot be kept down much longer as the figures obtained for Para rubber are out of all proportion to those which old rubber commands. Although no transactions are being made public the price is advancing and it is doubtful if the reclaiming interests will be able to pull it down to its old place. We quote: Copper wire 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 1-2c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 6 3-4c. to 7c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 27, 1905.

DESPITE the remarkably high prices at which most metals are quoted, there is a very large volume of trade doing. Many orders are being booked for forward delivery and the total of the month's business has been exceptionally large.

As predicted last week an advance has been made in Canada plate and galvanized sheets. Ordinary Canada plates are now quoted at $2.75 an advance of 25c., a similar rise being recorded in galvanized sheets.

Iron is very strong and the product of some mills cannot be procured at any price owing to booked orders. All ingot metals are likewise strong while pig lead has made another advance and is now quoted at $4.10, the highest figure on record.

Pig Iron—Advances in outside markets give added strength to the local market. Prices are firm and trade active. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 00
Londonderry, at furnace	16 50 to 17 00

Bar Iron—While no further advances are reported the market holds strong and still higher prices are likely as the mills are pushed to their utmost capacity to supply the active demand. We quote $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—Market is active and demand very keen. Quotations have fluctuated, but are now steadier.

Tin Plates— Demand is active with considerable strength shown in prices.

Galvanized Sheets—As predicted last week new lists appearing this week show an advance of about 25c. The demand continues very active.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Another advance has been made and the market has reached record figures. Buying continues heavy and prices firm. We quote: Pig lead $4.10 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Trade is brisk and prices quoted are firm. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Business being done is quite large, no falling off in the demand being reported. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Increased activity is reported and prices are a trifle stronger.

Old Material—Lead is in better demand and copper is weaker. Iron is not as active here as in the States. Dealers' buying prices are as follows: Heavy copper and wire, 13c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $7.50 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 1-4c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Possibility of a strike in both the anthracite and soft coal fields is making business active. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

$1.25; run of mine, $1.05; nut, 90c.; N. 3-4 inch, $2.35; mine run, $2.35; slack,

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age October 26 1905

BOOKINGS of finished iron and steel continue on an enormous scale and thus far this month are nearly up to the record-breaking rate of September. The pressure in many quarters is enormous and the plants are provided with work for long periods. There is the most intense activity in all directions.

In the eastern steel trade there has been another outburst of buying of basic pig iron for delivery during the winter and fully 75,000 tons have been taken at advancing prices, with negotiations pending for at least half as much more.

A scarcity of pig iron for steel making is developing in the Chicago district and it is likely that iron may be shipped from lower lake ports to that district by water before navigation closes.

The United States Steel Corporation has secured options at $16 and at $16.50 on practically all the Bessemer pig available in the Mahoning and Shenango Valleys till the end of the year, the only exception being one lot of 10,000 tons held by a merchant.

These purchases of iron are necessary in spite of the fact that the Steel Corporation is operating all its blast furnaces except three, of which two are out for repairs.

In the steel rail trade a number of fair orders have been booked and some additional large tonnage is looming up.

Thus one system which has already bought 140,000 tons is again in the market for 20,000 tons more.

Inability to make prompt deliveries of structural material continues to be the only serious phase of the situation in that branch. A large tonnage for future requirements is being booked. With the large orders for cars in hand and in sight the plate mills have an exceedingly busy time before them.

The amount of business done in bars has been large and sellers are holding back. Among the orders for merchant pipe just placed is one for a 33-mile line in Louisiana.

The cast iron pipe shops are very busy with some large work coming up. Included in the latter is a good order for New York City. The shops cannot yet think of working for stock, which they usually begin to do at this time of the year.

There has been a heavy movement in tin plate, and there are included in recent sales nearly 7,500 tons of tin plate for export.

Canadian buyers are very urgent for steel and finished material the volume of business there being extraordinary, but our mills are not in a position to take much of it.

The reports from foreign markets are excellent, the bookings of shipbuilding material in England, in particular, having been very large.

The line of "Metallic" Stone and Brick Fronts which we offer to dealers in Sheet Metal goods this year contains many patterns, some of them simulating cut stone so perfectly that only close inspection reveals the pressed metal. The effect may be still further perfected by the use of paint and fine screened lake sand.

While our "Metallic" Fronts are for more exact in imitation of stone or brick, and are made of better metal, they cost no more than the poorly made sort.

We are after the trade on the score of price and quality combined.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.

OF CANADA, Limited

(Established Twenty Years)

Toronto ***Winnipeg***

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Siding (stone, brick, etc.)

"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Material of every description.

408

LONDON METAL MARKETS.

From Metal Market Report, October 18, 1905.

Pig Iron—Cleveland warrants are quoted at 53s. 6d, and Glasgow standard warrants at 51s. 10d, making prices as compared with last week 6d lower for Cleveland warrants and 6d lower for standard warrants.

Tin—Tin opened firm at £149 2s. 6d, futures at £148 5s., and after sales of 100 tons of spot and 150 tons of futures closed easy at £148 15s. for spot and £147 17s. 6d for futures, making price as compared with last week 2s. 6d lower on spot and 7s. 6d lower on futures.

Copper—Spot copper opened steady at £72 5s., futures £71 5s., and after sales of 250 tons of spot and 600 tons of futures closed firm at £72 7s. 6d for spot and £71 2s. 6d for futures, making price as compared with last week 2s. 6d lower on spot and 2s. 6d lower on futures.

Lead—The market closed at £14 15s., making price as compared with last week 3s. 9d lower.

Spelter—The market closed at £28 15s., making price as compared with last week 2s. 6d higher.

Nova Scotia Trade News

PRICES have taken a sharp advance in some lines of hardware since last report. Bar iron is quoted at $2.10 base, an advance of ten cents. Zinc is quoted at eight cents by the cask, and 8½ cents for lesser quantities. Sheet lead is selling at 5 cents per pound by the roll, and 5½ cents for smaller quantities. Black sheet iron 18 by 24 gauge is quoted at $2.25, and 26 gauge at $2.40. Galvanized sheet iron 18 x 24 is selling at $3.75 and 26 gauge at $4 per hundred pounds.

The stove dealers are consuming large quantities of these goods at the present time, and orders are coming in quite freely. They are extensively manufacturing stove pipe and bake pans. Business generally continues most satisfactory, and no complaint is heard regarding the condition of trade. The outlook for the mining industry in the Province is more promising than it has been for some time, and from some sections good orders have been received. Some firms here have filled good orders for iron pipes, and the demand for lumbermen's supplies continues very good. Blasting powder is being sold quite freely, also ammunition, and a considerable quantity of bar iron is being sent out of the warehouses. Dealers here decline to quote prices on glass. A number of them have large stocks on hand, but they prefer to hold the article rather than part with it, even at the advanced prices.

Some of the firms are now busy shelving their new cutlery and small wares.

During the week the last span of the superstructure of the Hillsboro bridge at Prince Edward Island was placed in position. Considerable work remains to be done before all is ready for railway and carriage traffic, but the placing of the last span marks a noteworthy date in the progress of the work. The bridge is by far the most important project of its kind ever attempted within the Island Province. Both the Federal and Provincial Governments have contributed and will contribute, though in very different proportions, to its cost of maintenance, and it is expected that about the first week of November trains will be operated on the Southern Railway, thus giving daily communication by rail for the first time between the southeastern section of that Province and Charlottetown, and marking an important era in railway development in the Island.

Dominion No. 3 colliery, Glace Bay, was idle during the week, the miners having gone on strike on account of the new explosive, "Bobbinite," introduced by the company. The miners claim the plug powder is not as effective for their work as the loose powder. The price of the former is also higher. At a conference between the officials of the Dominion Coal Co. and the men it was decided to test the leading safety explosives on the market, together with Bull Dog and Bobbinite, at all the collieries of the company. In the meantime the men have consented to return to work.

The steamer Trebia, which arrived here during the week, landed 18,346 steel rails for the South Shore Railway Co.

DOMINION CO.'S ANNUAL MEETING

THE annual meeting of the Dominion Iron & Steel Company, held in Montreal on October 18, brought together an unusually large number of shareholders, and was marked by some interesting announcements. The most important of the latter was made by Mr. J. H. Plummer, the president, when he stated that Mr. Frederic Nicholls, the vice-president of the company, had decided to retire from the executive and board of the company. On the occasion of his withdrawal, Mr. Nicholls was offered a very handsome remuneration by the directors, but this he absolutely refused to accept. The directors then presented him with a very valuable piece of silver, as a slight token of all that he had done for the company. A very hearty vote of thanks was extended to him by the shareholders.

As the financial statement submitted at the meeting was only up to May 31st President Plummer, on request, gave some interesting figures of the four months to October 1. This statement showed that for the four months the total earnings had averaged $73,000 a month, while the interest charges had aggregated $56,000, leaving a net profit of between $16,000 and $17,000 a month to be applied for sinking fund or other purposes.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Oct. 27, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

BUSINESS in all lines of general hardware continues very active there being an especially heavy movement at present of heavy goods. Shelf-hardware is also in good demand. Prices are fairly steady in all lines.

Lanterns—Wholesale prices are steady and are quoted as follows:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Since prices were fixed for next season there have been no new features of interest. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized, 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire, 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire, 14	3 30
" 15	3 45
Annealed wires (unoiled) 10c. less	

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Immense quantities of wire nails are being hurried in before the close of navgation. The price has been steady since the decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4 00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c
Pure fibre, plain	60c.
" tarred	80c

Ammunition, Etc.—Sorting orders are still coming in. Discounts continue as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge	
black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 16 to 16 gauge, 100 lb.	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—There are rumors of an advance in some makes of galvanized sheets. Prices are firmly maintained at following prices:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge,	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Tin Plates—Prices are quoted as follows:

Tin plate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

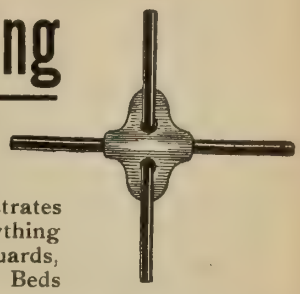
Sheet Zinc—The price is now $7.75 for cask lots and $8.25 for less than cask lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote

Black iron pipe, ⅛ inch	....
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 50
" 1¼ "	7 45
" 1½ "	8 95
" 2 "	12 30

Petroleum and Gasoline— Prices are still quoted as follows:



Silver Star, per gal	21c.
Sunlight "	22c.
Eocene "	24c.
Pennoline "	25c.
Crystal Spray "	24c.
Silver Light	22c.
Gasoline, 74 76	27c.
Gasoline, 7 -72 (Engine)	25c

(In barrels f.o.b. Winnipeg.)

Paints and Oils—Business continues brisk at unchanged prices. We quote:

White lead (pure)	$6 00	6 25
Bladder putty, in bbls		0 02½
" " in kegs		0 02¾
Turpentine, pure, in barrels		0 96
Less than barrel lots		1 01
Linseed oil, raw		0 57
Boiled		0 60

British Columbia Trade News

Vancouver, B.C., Oct. 19, 1905.

ONCE more the "largest shingle mill in the world" is being erected. This time it is to be on the west coast of Vancouver Island. The last time it was in the city of Vancouver, and the mill then erected, owned by the Hastings Shingle Manufacturing Co., has continued to hold the championship in size and daily capacity. The new mill is being erected by the Seattle Cedar Manufacturing Co., which has secured large holdings of choice timber lands on Vancouver Island. The mill is to cost half a million dollars and is to have a daily cutting capacity of 380,000 every ten hours. The location selected is on Mosquito Harbor, Mears Island, and the same company intends erecting a smaller mill on Nootka Sound. The company has begun operations, and the manager, H. G. Pake, has been in the city of Victoria this week buying and forwarding supplies by the coast steamers, by which he has also been sending up men. The increasing scarcity of cedar in the coast districts of the State of Washington is driving millmen of that State to British Columbia, where they are buying everything in sight in the cedar line.

* * *

The White Pass & Yukon Railway Co. has established a record in the handling of freight. On October 13 there was not a pound of freight left between Skagway and Dawson to be forwarded. Everything had been cleaned up although the river is still open for navigation. Last year when the river closed there were 800 tons of cargo piled up at White Horse. As most of the perishables were forwarded first, the bulk of that held up was hardware and similar goods. These were in their way as important as the provisions, but not being of perishable nature nor liable to reduction in value intrinsically, the other articles had the preference when it came to a delay. For the first time on record Dawson merchants have in hand all the stock forwarded to them.

* * *

Fire destroyed a dry-kiln and a portion of the lumber sheds with the stock they contained at the mill of E. H. Heaps & Co., Vancouver, on October 17. This, with the exception of the fire in the Red Cedar Lumber Co.'s mill a few weeks ago, is the first mill fire of any extent for some years. though the number and capacity of the plants in operation on Burrard Inlet and False Creek has almost if not quite doubled in that time. The damage to the Heaps plant was not sufficient to close the mill down, though the loss is estimated at $10,000.

* * *

Activity in zinc properties in British Columbia seems to be on the cards. Last year C. Fernau erected a zinc-enriching plant at Rosebery on Slocan Lake, to reduce low-grade zinc ores to concentrates. This year he has completed at Frank a zinc smelter of large capacity. Heretofore all zinc went to Belgium from this Province for smelting and refining. It is more than rumored that many zinc properties close to Vancouver have been quietly acquired under bond, and some developments of importance in the mining of this metal are expected shortly.

* * *

After a long and tedious series of negotiations the City Council of Vancouver has reached a conclusion with the telephone company whereby the city agrees to permitting the company to put its wires underground, a change which was completed some weeks ago, the terms only being under discussion. Everything is now arranged satisfactorily, and the company has the moral support of the council to the placing of their wires underground. The council never opposed the principle of underground wires but held that the company was bound to recognize the city and to act under supervision of civic authority. Meantime the work was prosecuted under difficulties until a provisional agreement was made, the work was carried out, and the final agreement reached.

* * *

Mining in the Boundary district is particularly active at the present moment. The big Granby smelter at Grand Forks is running full capacity, its eighth and last stack having been blown in. The company has been handicapped all summer by lack of power. They are now anticipating the completion of the new power transmission line of the West Kootenay Power Co., and in the meantime are taking advantage of cheap water power afforded by the Kettle River, which is at present at a high stage.

* * *

In the Similkameen country the big Nickle Plate mine, owned by Marcus Daly and associates of Butte, Montana, is doing extremely well. As soon as the Great Northern branch now being built reaches Hedley, which will not be long, the mill will be increased from 40 stamps to perhaps three times that number. There are about 150 men now employed round the reduction works. Mr. B. R. Lamb, an Australian, has recently been appointed manager of the mill. Mr. M. K. Rodgers remains general manager of the mine and all the company's interests in the Province.

* * *

The opening of the Crofton smelter on Vancouver Island has given encouragement to many island and coast properties. There is every likelihood of a number of mines in the Mount Sicker camp getting on the shipping list.

* * *

In the interior the Hall Mines smelter at Nelson will be shut down for some time to instal new machinery and increase its capacity. The latest reports from London show a sudden increase in the value of this company's stock in the market.

PERSONAL MENTION

Quebec.

W. Gaulin, tinsmith and plumber, of St. Cesaire, was in Montreal on Thursday.

J. B. Bordua, of St. Charles, Que., was in Montreal this week looking after his business interests.

Chas. Leblanc, hardware merchant, of Joliette, paid a business visit to the metropolis on Friday.

P. Gaudet, proprietor of the water works, St. Ours, visited Montreal last week to purchase supplies.

J. C. Harbeck, hardware merchant, of St. Johns, Que., visited Montreal last week on a buying expedition.

W. H. Dorken, of Dorken Bros. & Co., hardware importers, Montreal, visited Halifax and St. John last week.

Geo. J. Crowdy, of Jas. Hutton & Co., importers of cutlery, Montreal, has returned from his European trip.

G. C. Davis, of Frothingham & Workman, Limited, is spending a few days on Lake St. Louis, duck shooting.

P. D. Dods & Co., makers of Island City paints, Montreal, are enlarging their factory on St. Patrick street.

M. Guertin, of Hebert & Guertin, general merchants, St. Charles, visited Montreal wholesale houses last Monday.

Willie Gaucher, agricultural implement agent, of St. Damase St. Hyacinthe county, Que., spent Saturday in Montreal.

Jean Roux, proprietor of the saw and grist mill and electric lighting plant at Ste. Therese, was noticed in Montreal last week.

M. H. Day, general manager of the Consumers Cordage Company, Limited, Montreal, spent a few days of last week in Toronto.

James Kinsman, representing North Bros. Manufacturing Co., of Philadelphia, was in Montreal and Toronto this week calling on the wholesale trade.

John A. McAvity, St John, N.B.
President Maritime Provinces Wholesale Hardware Association.

R. H. Cowan, of the Traders' Company, Buckingham, Que., was a visitor at some of the Montreal wholesale warehouses on Tuesday. Mr. Cowan reports that trade in his district is remarkably brisk, and dealers are looking forward to a big season.

The Montreal branch of the Canadian Manufacturers' Association and the wholesale hardware dealers met in joint session Monday to consider some matters in reference to the new car service rules. Mr. J. R. Marlow of the Manufacturers' Transportation Department, attended the meeting.

Ontario.

The new building of the Wampole Co., Perth, is nearly ready for occupation.

Aaron Charles, hardware merchant, Gravenhurst, is advertising his business for sale.

E. K. Spinney, Yarmouth, N.S.
Ex-President Maritime Board of Trade.

Wm. Vallance, wholesale hardware merchant, Hamilton, is erecting a $3,000 stable.

A. E. Kemp, M.P., was a caller at the Toronto office of Hardware and Metal a few days ago.

W. F. Cockshutt and Mrs. Cockshutt, Brantford, have returned from a month's trip to the Pacific coast.

Alex. Saunders, of the Goderich Organ Co., attended the meeting of the Central Supply Association in Toronto this week.

The wife of D. A. McNab, of McNab Bros., hardware merchants, Orillia, died at the Toronto General Hospital last Friday.

Joseph Shildrack and wife of Hagersville have just returned from a holiday trip to Cleveland, Buffalo and other American cities.

T. H. Stephens, of the Empire Brass Co., London, was in Toronto this week attending the meeting of the Central Supply Association.

C. C. Ballantyne, of the Sherwin-Williams Company, Montreal, was in Toronto a few days ago on Manufacturers' Association business.

A. M. Bell, Halifax, N.S.
Second Vice-President Maritime Board of Trade.

Major Allen, hardware merchant, Newmarket, is spoken of as the probable Conservative candidate in North York, to oppose the Hon. A. B. Aylesworth.

W. W. Near, president of the Page-Hersey Co., Guelph, was a visitor in Toronto this week, attending the meeting of the Central Supply Association.

H. T. Bush, of the Standard Ideal Sanitary Company, Port Hope, was a visitor in the city this week, attending a meeting of the Central Supply Association.

L. N. Patterson, general manager of the Patterson Roofing Co., Toronto, has been confined to his home this week owing to a severe attack of rheumatism in his shoulder.

John Burns, manufacturers' agent, representing D. Moore Stove Co., Burrow, Stewart & Milne, and the Canada Screw Co., Hamilton, and the Belleville Hardware Co., Vancouver, was a caller at Toronto office of Hardware and Metal this week.

MARITIME HARDWARE DELEGATES.

AT the convention of the Canadian Wholesale Hardware Association in Toronto last week the Maritime wholesale hardware merchants were represented by a strong delegation three of whose portraits are reproduced herewith, and the fourth, Mr. W. H. Thorne, St. John, we expect to present to our readers in an early issue. Mr. McAvity is president of the Maritime Provinces Wholesale Hardware Association, Mr. Spinney is past president of the Maritime Board of Trade, and Mr. Bell is at present second vice-president of the latter body. It will be seen, therefore, that the delegation was particularly representative and their influence, thrown into the effort to bring about a strong organization of wholesale hardware dealers throughout Canada, should so much towards aiding in the success of the effort.

PAINT, OIL AND BRUSH TRADES

STAINING COLORS IN THE PAINT TRADE.

COMPLAINTS are rife among some of the paint-grinding houses that trade in staining colors (by which are commonly meant ochres, siennas and umbers in oil, and a certain proportion of oxide colors and chemical colors) has dropped on seriously of late. Individual firms may be in a position to assign definite reasons for this, but there is one factor in the case which is undoubtedly exerting a potent influence, and which appears to be overlooked by many. It is the present fashion in "white work." For outdoor work light colors are all the vogue. Houses are now finished in white or light tints of cream, stone, ivory or grey, whereas in years gone by full tints were prevalent. In connection with interior work the change is even more marked. White or light-tinted enamels are universally adopted. "Plain painting" in colors, which used to be an important branch of the painter's trade, is now a dead letter, practically speaking, and the present popularity of water paints and washable distempers, enamel and white woodwork, will undoubtedly have the effect of curtailing the use of staining oil colors in the near future. The decadence of graining and marbling has also operated in the same direction. —Oil and Colorman's Journal.

NEW WHITE LEAD PROCESS.

THE Australian White Lead Manufactory of Sydney hold the patent right for a new process for the manufacture of white lead, which it is claimed has been successfully put into practice. The firm has been experimenting for about three years past, and it is claimed for the process that the product is pure metallic, non-poisonous, durable, unaffected by noxious gases and insoluble to acids and salts. The Railway and Public Works Departments have accepted the lead after testing it. Expert analysis has reported within .3 of absolute purity, baryta and sulphuric acid being entirely absent. Those officials who have used it report that it is soft and fine, and weight for weight will account for a greater surface than will the usual dry product. The raw material in the process of manufacture is galena, which first dried and sifted is run into a furnace to which the atmosphere has a free access. Therein it is changed into sulphate of lead in the form of vapor. This vapor is precipitated in a calico flue 2,000 feet in length. Its passage leaves a residue, which is the pure white lead. Within the flue while the cooling process is going on sulphuric acid and other fumes escape. The manager of the factory claims to be able to manufacture to sell at from £24 to £25 per ton, as against £28 per ton English standard price. A feature of the process is the entire absence of waste, the soiled product being refined by another passage through the furnace, the slag being treated in a blast furnace. The sole fuel used is coke. The finished produce presents a distinct greyish tinge, due it is said to the absence of adulterants.

TURPENTINE FROM STUMPS.

As recently announced in Hardware and Metal a newly invented mechanical process for the extraction from wood of turpentine, creosote, tar and other commodities is now in operation at Barry's Bay, near Eganville. The result of the working of the plant is expected to be the organization of a company with a large capitalization, and the development of the industry on a large scale. Red pine stumps are found to contain the largest proportion of pitch and the only expense connected with production is the wood consumed in heating the retorts. A lease of a large tract of land in the lumber limits has been secured and supplies for about forty years operation are said to be available.

The plant consists of a series of retorts—tank-shaped vessels around which heat circulates and exhales from the wood the vaporable properties which as they pass from one to another are refined until they reach the purest stage of the different liquids. The wood is placed in the large central retort and heat applied to a specific degree, when of course the more volatile substance rises and is carried off, leaving in each as it passes through the retorts and gradually cools, its heavier property. Thus the lighter vapor will reach the last retort as pure turpentine; others will receive it in a more crude state of refinement, while again it assumes the quality of creosote. Acetic acid is also produced. The degree of heat used to exhale these vapors will not extract the heavier substances and more is applied, bringing out what forms itself into oil of tar and pure tar. The large retort in which the wood is placed is of course air-tight and when it has been completely vaporized the substance left is the finest charcoal, so that every particle of the wood is utilized.

The Northern Oil & Gas Company, who have been drilling for oil near Manitowaning, Manitoulin Island, have struck a flow of oil producing 400 barrels per day with a pressure of gas amounting to 2,500 lbs.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 27, 1905.

THE demand for all classes of paints and varnishes continues good, though not abnormal and October will go on record as having been a good healthy month in the trade. Turpentine remained steady during the week without any further advance, thus justifying our predictions of last week.

Shellac continues steady with a good demand. The indications are that owing to the high price of turpentine and shellac varnish will have to be advanced for the winter. If present prices are held, and there is every reason to believe that they will be, an advance must occur.

Red lead is another article which must command a higher price very soon, certainly as soon as navigation closes. The prices we are quoting are considered the very rock bottom at present.

Turpentine—The demand during the past week has been quiet and there seems to be an impression that better prices will be obtained before long. We are still quoting the following prices: Single barrel, 98c. per gallon. Two barrels or over, 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Old Country markets remain active and prices there are firm with an upward tendency, but this has not yet affected conditions locally. We quote: Raw, one to four barrels, 45c. five to nine barrels, 44c.; boiled, one to four barrels, 48c.; five to nine barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—We quote: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal,

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—Prices are unchanged but are considered very firm. The strength of spelter being reflected in this market. Our prices are: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc—(Ground in oil) — We give the following prices: 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—We give the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Our prices are considered to be somewhat low, but they are nevertheless quoted by some of the local firms. We quote: Genuine red lead in casks $4.50; in 100-lb. kegs $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—The figures we give are benig shaded in some quarters, but we still quote: Fine orange, 55c. per lb. med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—Business is active and the demand is good. Our quotations are: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

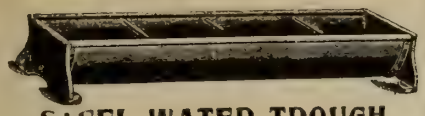
Mixed Paints—Prices still remain $1.20 to $1.40 per gallon.

Castor Oil—We are still quoting 8 1-2c. to 9 1-2c., according to lot. These prices, however, are being slightly shaded by a few of the jobbers.

Refined Peroleum--Business active and steady. A big rush of orders is expected until the close of navigation. No advance has been made on the local markets in spite of strength in the United States, and we are still quoting as follows: American water white, 16 1-2c. to 17c.; Canadian prime white, 14 1-2c.; 18 1-2c. ex warehouse.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Oct. 27, 1905.



A SCARCITY of turpentine on the local market has kept prices very firm, but no further advance has been made. The market in the south is weaker but it may rally before any of the cheaper product arrives in the north. Linseed oil is also quite strong at last week's figures.

Crude petroleum has advanced 2c., but refined is still the same. Shipments of the latter are very heavy and until navigation closes the movement of goods to the outlying districts is certain to be very large.

General business continues very active, some large purchases of white lead having been made owing to the looked for increase. Both barn and mixed paints are selling actively, while varnish is also in fair demand.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb.

HARDWARE MEN: Our

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c.; boiled, 50c.; 5 to 9 barrels, raw, 46c.; boiled, 49c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Shipments to the north and west are very large and will continue until the close of navigation. Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c; 18 1-2c. ex warehouse.

Crude Petroleum—An advance of 2c. has been made on crude petroleum, the rise holding good on all lines. We quote: Pennsylvania, $1.38; Ohio, 94c.; anadian, $1.34.

The International Lumber Company are purchasing large timber limits in New Ontario and are understood to intend to erect a mammoth saw mill at International Falls.

* * *

The contention made by the United States steel companies that the Canadian tariff on certain classes of iron and steel is certain to be lowered because the Canadian steel companies cannot meet the large demand is entirely scouted by the steel interests in Canada, who state that they are quite capable of filling any orders placed for rails, etc., and the different bridge and equipment companies can easily extend their plants in a way that will enable them to handle increased business.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

HAMILTON, situated at the extreme west of Lake Ontario and about forty miles from Niagara Falls, has for its size attracted more industries within the last couple of years than probably any city in Canada. The reason for this is not altogether due to favorable location, but more so to the enterprise of the public-spirited citizens of the place. They realized that this was Canada's growing time and made the most of it. It was not by holding out alluring baits that most of the enterprises were secured, but by having a straight business proposition to offer to any firm inquiring concerning manufacturing conditions within the municipality. When a manufacturer expressed his desire to look into conditions he was invited to pay a visit. When in the city he was taken over the ground and shown exactly what the city had to offer, told within a few dollars of what the land would cost, what would be his taxes, and any other information that a manufacturer needs must know when considering the cost and possibilities of a new enterprise. This spirit on the part of the officials of Hamilton met with a quick recognition and no doubt due to this fact many of the new industries are located there. The building of so many plants and bringing in such a large number of workmen within such a short space of time has given rise to a serious problem regarding workmen's houses but this is being rapidly overtaken, and street after street of attractive dwellings have been and are still being erected to provide for this contingency. Among the new industries recently attracted to that city are the London Machine Tool Co., the Canada Meter Co., the Union Drawn Steel Co., Canadian Drawn Steel Co., Samson Elevator Works, Petrie Mfg. Co., F. W. Bird & Sons, Holton Shovel Works, Canadian Tool & Shovel Co., and the Canadian Westinghouse Co., all of which are in a prosperous condition and employing from a few dozen up to about 1,000 men.

The John Gooderson Threshing Co., who recently purchased the works of the Canadian Machinery Co. at Point Edward, destroyed by fire a month or so ago, are making extensive improvements to their plant, the new additions including a wood-working room, a paint shop, etc.

The Doherty Stove Works at Sarnia have been enlarged.

The Marine City Sugar Co. may remove their factory from Michigan to Canada.

The Imperial Oil Works, Sarnia, is making improvements to its plant to cost $35,000.

Work on the Canadian Metal Company's smelter at Frank, Alta, is progressing favorably.

The Cleveland-Sarnia Saw Mills Company contemplate establishing a match factory at London.

The Merchants' Rubber Co., Berlin, are to build another large factory in order to increase their output.

Thomas McGill, Kearney, Ont., proposes to organize a $40,000 company and manufacture chairs at Cornwall.

The Toronto Railway Co. have purchased 2,000 tons of 90-pound rails from the Lorraine Steel Co. of Pennsylvania.

The American LaFrance Fire Engine Co., Elmira, N.Y., are considering the advisability of opening a new factory in Winnipeg.

The Durant-Dort Carriage Co. of Flint, Michigan, and Sarnia, is to enlarge its establishment in the last named place.

The Baynes Carriage Co. are locating a new factory in Hamilton, bringing the plant for their new works from their Buffalo factory.

Companies Incorporated.

The charter of the St. Thomas Gas Company has been surrendered.

The Superior Portland Cement Company, head office to be changed from Toronto to Orangeville.

The Dominion Engineering & Construction Co., share capital $100,000. The directors are Messrs. E. Mitchell, Edward Fabre Surveyor, Charles Mackay Cotton, Joseph William Weldon and Stephen John LeHuray, all of Montreal.
